But that does *not* have to be true. For example, a military recreation
station license has a call sign, but that license may be held by a non-amateur
acting as trustee. (And he can't operate the station, since he doesn't have
an operator's license, unless operating under the supervision of a control
operator who *does* have an operating license.)

Fasinating isn't it?

Gary

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 FEBRUARY AND FORECAST FOR 09 FEBRUARY - 11 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 07 Feb
Daily Proton Fluence >1 MeV: 4.3E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.9E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Feb 10 Feb 11 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Feb: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 07 Feb
Learmonth 8 2231 2322
Fredericksburg 7 9
Planetary 5 6

Observed Kp for 07 Feb: 2111 2223

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Feb 9 Quiet to unsettled
10 Feb 20 Active
11 Feb 18 Unsettled to active
COMMENT: IPS Geomagnetic Warning 3 was issued on 8 February and
is current for interval 10-11 February.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
08 Feb Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
09 Feb Normal Normal Normal
10 Feb Normal Normal Normal-fair
11 Feb Normal-fair Normal-fair Fair-poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
08 Feb 13

Observed Australian Regional MUFs:
Townsville: Near predicted monthly values, apart from 15-30%
enhancement 02-05 UT.
Sydney: Near predicted monthly values, with spread F observed
15-19UT.
Hobart: Near predicted monthly values,with blanketing sporadic
E observed at 05 and 13UT.
Darwin: No data.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
09 Feb 10 near predicted monthly values
10 Feb 0 near predicted monthly values/depressed 10 to
15%
11 Feb -10 depressed 10 to 15%/near predicted monthly values

Does anyone happen to have the phone number for the FCC?
I need to call them and find the rules on nonhams using a hams callsign.
One person says the ham does not have to get on air, id himself and
verify that he is control op for the nonham. I was told that he has to
do that. So, I wanna check with the FCC myself and see what they say
about this matter. So if someone has the number for them, i'd appreciate
it. Thanks.
N1UST

2161. Vanity Callsign Update

Just looking for an update. Last I heard "gate 1" was going to be announced sometime during 1Q96, but that was before the governmemnt shutdown. Has anyone heard any specific dates yet? TNX,

Tom, WB2SCW

2162. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4fgajk$opt@lyra.csx.cam.ac.uk>
Source record: 230858
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info,alt.folklore.military

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

* Following recent discussions the full collection is
* not now posted to alt.usage.english.

Brian Kelk bck1@cl.cam.ac.uk
9 February 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1956 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.
See also http://aviation.jsc.nasa.gov/alphabet.html, which
includes information about pronunciations)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

(See also http://aviation.jsc.nasa.gov/old-alphabet.html)

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details see the full list, which is posted at
intervals to sci.lang, rec.radio.amateur.misc and
rec.radio.info. On the World Wide Web you can find copies of
the postings and some further material at:

2163. Re: why a license?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: "Gary P. Fiber" <gfiber@halcyon.com>
Message-ID: <4fekij$hgi@news.halcyon.com>
Source record: 230859

I ran into a model " X222 " the other day. It was an ICOM 4SAT with a scrambler installed into it. Some Counter Spy shop modified the radio by installing a scrambler into it. Apparently they sold large numbers of these.

Still only operated in the amateur band 440 to 450 Mhz and was sold by a " spy " shop in the U.S. Obviously the intended operators were persons doing survlience activities. Never did find out why the radio was left only operational in the amateur band though. It gets pretty interesting where many " amateur " radios end up, still operating only in the ham band, lots of bootlegging going on out there these days.

2164. Re: Morse Code history?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Feb9.051749.9078@ke4zv.atl.ga.us>
Source record: 230860

In article <311624EA.3AC2@kuai.se> Fredrik Hofgren <hofgren@kuai.se> writes:
>
>I wounder if anyone could help me out on the history of the Morse Code?
>Some info on "language", "when" and "why".

Morse Code is, as its name implies, a code, actually an encoding of the Roman alphabet, no different in concept from ASCII. It is not a language, though as with any alphabetic symbol set, it can be used to *spell* words in a natural language such as English.

The Morse Code as we know it today is not the original Code invented by Samuel Finley Breese Morse in the period 1832 (concept) to 1844 (demonstration before Congress with the famous message "What hath God wrought"). It is a modified code called the International Code that we actually use on radio. The difference is that the Morse code used dots, dashes, and *intracharacter spaces* while the International Code only uses dots and dashes to make up letters. For example, in Morse the letter C is .. . while in International Code it is the familiar -.-. instead.

Morse's telegraph did not use a key to send. Instead it used a device called a *port rule*. And the Code was not received by ear. Instead it was written as a series of dots, dashes, and spaces on a moving strip of paper by a pen controlled by an electromagnet. In other words, Morse intended his Code to the *sight read* off a paper strip.

Composing a port rule was like setting movable type. The operator would select the letters out of type boxes and assemble them onto the rule to spell out the message. The port rule was then drawn through the Morse transmitter which had a roller and switch which followed the characters on the port rule and turned the current on and off in a series of dots, dashes, and spaces corresponding to the text sent.

Morse borrowed from the printing industry in devising his Code. He assigned the type box with the most frequently used letters the shortest dot-dash combinations, IE the letter E is used most in the English language, so Morse assigned a single dot to represent it, T is next with a single dash, A after that made up of dot dash, etc.

For receiving, a strip of paper was moved past a pen controlled by an electromagnet. The strip was either hand cranked or moved by a clockwork mechanism depending on the particular telegraph. When the port rule closed the switch on the other end, the electromagnet would pull the pen into contact with the paper.

Depending on how long the contact was closed there would be
a short or long mark made on the moving paper. As the port
rule was cranked through the Morse transmitter, a corresponding
series of dots and dashes would be made on the paper strip of
the receiver. The operator would then sight read the paper
and transcribe it back to Roman characters on a message blank.

With long messages, there was a lot of looking back and forth
between the paper strip and the message blank as the message
was transcribed. Some operators began to recognize characters
just by the tapping sound the pen made, and started transcribing
directly without waiting for the paper strip to emerge from
the Morse receiver. Eventually the pen and paper strip were
replaced with just an electromagnet pulling a *sounder* in
and out of engagement, and Morse started to be copied by
ear from the click-clack sounds coming from the sounder.

Similarly, the port rule took time to assemble for each message,
and telegraphers learned that they could simulate its effects
by manually working the switch, and the key was born.

Thomas Edison was a telegrapher as a young man, but due to growing
deafness he couldn't hear the click-clack of the sounder, so he
invented the *ticker tape* machine. This was in some ways a throwback
to Morse's original telegraph in that a moving strip of paper was used
to transcribe the message. The difference was that Edison devised a
new *uniform* machine code, and a code reader that actually printed Roman
alphabetics on the paper strip instead of dots, dashes, and spaces.
Anyone who could read could use the ticker tape. It was in essence
the first teletype machine. Edison envisioned one in every home.
Unfortunately for Edison, there was this other fellow named Alexander
Graham Bell who invented a talking machine so that anyone who could
talk could use it, and that became the standard device in the home
instead.

And now you know... the rest of the story.

In article <DMB7CE.GF@world.std.com> barnaby@world.std.com (Richard Barnaby) writes:
>A question then still remains in my mind, then...
> 1) What is the difference between "R"oger "CFM (Confirm)
> and QSL, and if they are the same, why the redundancy?
> is QSL the only ITU approved signal, and the others
> just common usage?

Yes. QSL is for *formal* traffic acknowledgement, and is an ITU standard.
R (or on voice Roger) is an acknowledgement of an *informal* transmission,
IE one that does not require transcription and delivery to a third party.
Basically it means "I heard and understood what you just sent". CFM is just
telegrapher's shorthand and has no official standing as far as I know.

Of course if you listen for very long, you're bound to hear "R PSE RPT
QTH", which is, of course, an oxymoron. "Roger" has devolved among some
operators to merely being an acknowledgement of the "over" sent by the
other station.

: and 'dim as a Toc H (Talbot House) lamp'.

I note from idly spinning through this thread that -- in almost all
variants -- the words chosen for the phonetic alphabet are relatively
common. All that is, except "toc." What the hey is a "toc"? Unless
it's a tic's twin, the meaning escapes me. It's not in any of my US
dictionaries.

>presented in a totally inappropriate way. We give everyone the exact questions
>and answers that will be on the test. Were you tested this way in school?
>Didn't think so.

Actually, many professional and trade exams are given just this way.
The real estate exam, the electrical contractor's exam, even the written
commercial driver's license exams, are given from a public pool of questions,
just as are amateur exams. The only real difference is that sometimes the
pools are larger for professional licensing exams than they are for amateur
exams.

>>the correct answer for the 80m novice band is 3675-3725 kHz for the US.
>>How is that not memorization?
>
>Yes, there are a few things, such as the band edges, which can't be done any
>other way - rote memorization. This doesn't mean the whole test should be that
>way. It's trivial to program a computer to draw a resistive voltage divider,
>pick a random applied voltage and random resistor values, and calculate what
>the right answer should be. I see no reason why this kind of question "has to
>come from the pools". If you know Ohm's law, you can figure out the answer
>from this knowledge. If you memorized the question pool, you circle the answer
>you memorized, no knowledge of any electronics needed, and move on.

If the simple algebra of Ohm's Law is your idea of a technical exam,
I suppose juggling numbers could be done. So that's one question, now
what about the rest? About a third of the exam is legal, and that can
only be memorized. About another third of the exam is *terminology*,
and that too can only be memorized. The remaining third, including the
infamous Ohm's Law question, may require a bit of reasoning or calculation.

If you took all the questions requiring simple mathematical manipulation
to answer and ignored them, you'd still have a good chance of passing the
exam. The exam isn't a mathematics test, so worrying so much about simple
math problems misses the whole point of the exam.

Not practically.

>2) Where can I buy leaky coax at a reasonable price?

The trade name for what you want is "Radiax". I believe it is
made by Andrew. It is not cheap (around $2 a foot).

There is another way. You can use drop fittings in the line and
dipole antennas at intervals. Use 30 db couplers for your drop
fittings near the transmitter, and increasingly larger coupling
factors as you get further away from the transmitter, IE use a
12 db coupler, a 6 db coupler, a 3 db coupler, and finally just
put an antenna directly on the end of the line.

This probably isn't as good as using Radiax, but it might be
cheaper if you ignore installation costs. When you consider
professional installation costs, which can range up to $2 a
foot themselves when you start talking about drop fittings,
then the cost of the Radiax doesn't look quite so bad.

Hi Gang,
I'm going to try to get my US license in March. According to the
requirement of FCC I need to have a US mailing address.
So I am looking for a friendly and reliable US radio amateur providing me
a US mailing address and forwarding official FCC letters to me.
I'm 41 years old, ham since 1977 and active mostly in CW on hf bands (but
I am equipped with a microphone, too ;-)). I'm married, no kids, three
cats and work as a regional sales manager in a pharma company. Other
hobbies are travelling, motorbiking and scuba diving.
I you think this could be a good idea for you let me drop some lines via
email.

>Which is one of the differences between hams and CBers. CBers are
>considered appliance users, and hams are considered experimenters.

R>That also explains why HF rigs can't be used on CB - they aren't type-
>accepted.

That's funny since the "Big Three" always advertise their rigs before
they get type acceptance from the fcc and run a disclaimer at the bottom
of their ads! It says something to the effect that it will not be
available for sale until approved by the fcc. I THINK that the type
acceptance does not apply to the rigs that hams build themselves.
Correct me if I am wrong.

I am interested to buy a low cost VHF HT for mobile operation.
(I have a 25 W PA already). Some time ago, the RS HTX-202 has
been discussed here to be a good candidate for its price.
Can anybody tell me, if there is a 1750 Hz tone generator
build in that HT ? (for the german repeaters need to be opened
via that tone)
What's the actual price for that HT ?

Please email your answers directly to me, for my newsreader has
no adequate filter to remove the noise on this group (no-code,etc..)

73,
Theo (DK9WH)

Hello Gang,

I've got some telegraph key restorations going and need a few parts to
finish up. Need parts off of older Vibroplex bugs +

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. McElroy A-400 bug -- need thumbpiece and weights. A-400 or P-500 parts OK
3. Signal Electric Semantic -- need the pendulum stop post.
4. Electro Bug -- need weights. need one thumbscrew and jam nut.
5. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.
6. Logan SPEED-X reverse frame -- need finger pieces
7. Clapp-Eastham -- need binding posts
8. Independent Wireless -- need binding posts

Would buy parts off your junkers or buy your junkers for the parts.

Code Practice with the KAM

You can use the KAM or KAM Plus to send code through a local repeater, listen to code with a speaker, and make code tapes. You can also practice sending code and have the KAM display the results on a computer. This article discusses KAM parameters, cables, and operations.

Article URL: http://www.idir.net/~medcalf/ztx/kamcode.html

From the home page at http://www.idir.net/~medcalf/ztx/ you can link to other articles mostly about digital modes. The articles may be reprinted in amateur radio club newsletters provided that credit is given to the author.

The site also contains diagrams for wiring radios to tncs.

Hi:
I've been planning to launch a double stage rocket with a Morse Code Transmitter on it. I'll be using a Z8 micro to shift a code string to a xmitter. The hard part, I don't know what to have it send. I figure my call and grid square would be good, but I have room for so much more. I suppose I can have it count time from an event, like the launch, but putting in an altimeter would add too much weight. Any suggestions?

Thanks!

> some 50 ohm 5W non-inductive resistors? Alternatively, I could use 25 and
> 100 ohm ones, too.Unfortunately, even tiny chip resistors have a little bit of inductance (a nH or two, typically)

But, even 100 nH is often acceptable in a 100 ohm resistor used to make an HF dummy load (two in parallel), since a 20 dB return loss is often acceptable.

Hamfests are great places to get resistors for homebrew dummy loads--just wait till the end and start bargaining... it helps to offer to take home the whole box...

While wire wrap wire is a fine thing, DON'T use it to wire up your dummy load to a piece of coax. You want thick, low inductance wires--not #30 wire. See page 36 of the January 1995 QST for an example of an inexpensive wiring technique that uses unetched circuit board for a low impedance ground return.

If you build it and need a lower SWR at 2M or higher, you might consider using some lossy coax to flatten out the SWR. Alternately, you could resort to clever engineering techniques, like adding capacitor(s)to cancel out the reactance or making transmission lines to absorb the unwanted inductance.

If your news reader accepts attachment files. E-mail a request for IMCT and I'll send IMCT back to you by e-mail.

IMCT handles the training for the beginner and the advanced student (0-20 + WPM). It helps you learn the sounds and takes you right up through various code tests. You can design your own tests, adjust the speed, spacing, etc. There is also an on-screen radio which simulates CQers, QSOs, even tuner-uppers! W/95 version comming soon!

The cable that you describe is known as RADIAX, and is commonly used in long tunnels and subway
systems in the manner that you describe. It is fairly sophisticated, and is available in a variety of attenuations both "along" and "thru" the cable, over defined frequency bands. If you
are in the VHF region, and you are within a building that is not over an eighth of a mile or
so, you might take a tip from the cardiac and life sign monitors used in hospitals and simply
run an ordinary 50 ohm cable Tee'd into simple quadrapole or discone radiators every few hundred feet. Radiax is not cheap. Slotting RG-8 is probably not practical, and would not allow
much prediction of effectiveness before hand. Try Radix Wire Company, 26260 Lakeland Blvd. Cleveland, Ohio 44132 (216) 731-9191 FAX (216)-731 7082

2180. Re: Call Letters Now-a-Days.

From: Bill Rhodes <rhodes@raster.kodak.com>
Message-ID: <4fgbcf$l1c@kodak.rdcs.Kodak.COM>
Source record: 230876

The answer to your questions is not straight forward.
RE: #1 Yes, the FCC still issues calls by number district and they are the same as they have been for many years; however, they no longer automatically re-issue your call if you move from one area to another. So you will now hear many 2 calls with California addresses, etc.
RE#2 They were at one time, however since they went to the expanded call letter base I think they may not be doing it actively anymore. The advent of vanity calls will likely get many reassigned again.
RE#3 Yes but nut with absolute certainty. All other things being equal when you apply for a license the FCC assigns from a specific group e.g. 2x3 calls starting with KA, KB are technician, 2x1 calls starting with AA, AB etc are extra, etc. However, if you upgrade you have the option to keep your old call so once again you can not tell a person's license class for sure by their callsign.
RE#4 I do not know the chronology completely but it is published. Several of the ham mags publish the last call issued in each class so you can see where they are. The chronolgy started with the separating of the classes to specific call structure (as in #3) e.g. Tech started with KA2AAA thru KA2ZZZ, then KB2AAA THRU KB2ZZZ, etc.

Hope that is helpful, I know it is all written down somewhere, but due to the fact that you cannot really tell much as many people keep their old calls after upgrade I do not try to keep track of it anymore....73

2183. WTD: Software to Operate a XCVR for the BLIND

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: fanjoy@io.org
Message-ID: <Sf1GxcGnHw7Y085yn@io.org>
Source record: 230879

I am seeking software to operate a Kenwood TS-450 from a computer for use by the blind. Requirements:

Preferably in Basic. I'll leaarn C if I have to but I'd prefer not. I know I'll want to add enhancements and changes.

DOS based, not Windows

If I have the above I can satisfy two other needs:

Accessible to the computer speech processor - no graphics and one piece of information per line.

Very large print on the computer screen

I am a retired engineer who is a volunteer working with the Canadian National Institute for the Blind Amateur Radio Program. It's no small program, since 1967 we have arranged for the provision of over $500,000 worth of HF transceivers to the blind all across Canada. We are currently working on tools to make Amateur operation more friendly for blind operators.

Help appreciated - 73

2186. Re: YAESU FT-707 Transverter

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-09 00:00:00 UTC
From: k6eid@avana.net
Message-ID: <NEWTNews.823913496.802.k6eid@k6eid.avana.net>
Source record: 230882

I have a like new FT-707 transverter with the 6 meter and
2 meter modules. Asking $350/OBO.

I used it with my FT-757GX. Technical info follows:

The transverter works on all the modes of the HF rig
and there are modules for 50, 144, and 430 mHz. It can
operate satellite modes with full duplex operation
between 28, 144, and 435 mHz. It includes repeater
splits on all repeater bands. It permits use frm
50-54 mHz, 144-148 mhz, and 430-440 mHz. It's power
input is 20 watts on SSB and CW and 5 watts on AM/FM.
Its input range is 28 to 30 mHz.

The only interconnections
between the HF rig and the transverter are a phono
connector cable frm an RF output jack on the HF rig ,
the DC power cord and a coax from the HF antenna 259
connector to the transverter. Appears that it
might work on any rig that has those kind of
connections. The RF output jack on the 757 provides a
low level RF output from an early stage of the xmtr. Power
level is about -6 dBm (0.1 Vrms) at 50 ohms.

From: "Lacy Thompson Jr." <ltsound@atl.mindspring.com>
Message-ID: <4ffkd0$bc7@firebrick.mindspring.com>
Source record: 230886

A new Vocal Eliminator algorithm which allows for even more vocal elimination than LT Sound's State of the Art VE3+ will be introduced in early 1996. Persons interested in finding out more about the Thompson Vocal Eliminator(tm) are invited to visit our home page at http://www.ltsound.com or e-mail a catalog request to ltsound@mindspring.com
The VE3+ contains State of the Art Vocal Elimination, Key Transposition, and Vocal Enhancement in one compact unit. The Thompson Vocal Eliminator(tm) allows users to remove the vocal from standard stereo recordings producing inexpensive, instantly available background music from the original standard recording. Software upgrades occur approximately every 6 months. Current owners of the VE3+ will be able to upgrade their software for a nominal charge of $25.

From Tad Cook, KT7H
Seattle, WA February 9, 1996
To all radio amateurs

SB PROP ARL ARLP006
ARLP006 Propagation de KT7H

Solar activity is still very low. There were five days over the
past week with no sunspots, and those days also had solar flux of
74 or lower, which is the average flux for the past 90 days.

Don't expect any change at any time soon. Solar flux will continue
low along with low geomagnetic indices. There may be a slight
disturbance this weekend, but the A index shouldn't rise much above
10. Solar flux may rise toward the mid-seventies around the and of
this month.

The NOAA Space Environment Service Center has a very nice web site
with lots of solar images and historical solar data. You can find
it at http://www.sel.noaa.gov. The images of the sun are quite
nice, but they should be a lot more interesting in a few years when
they are covered with spots.

Sunspot Numbers for February 1 through 7 were 15, 15, 0, 0, 0, 0
and 0, with a mean of 4.3. 10.7 cm flux was 75.1, 76.4, 74, 73.5,
71.4, 71.2 and 70.1, with a mean of 73.1.

You need a copy of the rule book. There must always be a control operator
who can at the very least power off the station if something untoward
happens. I believe the rules only state that the control operator must be
present at all times. But if, for instance, someone who recognizes that the
call sign doesn't match the voice comes on and asks, it wouldn't hurt to be
prepared to verify that in fact your call sign is being used properly.

2200. Racal TRA967 6 M FM XCVR

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-10 00:00:00 UTC
From: mazalr@bgumail.bgu.ac.IL
Message-ID: <199602100800.KAA28139@bgumail.bgu.ac.il>
Source record: 230806

I have recently aquired a Racal Mobical TRA 967 6m FM rig. It works fine
but I think that the receiver sensitivity could use some touching up.

I assume that "G" hams used to work at Racal. Anyone out there (in Reading)
know how to tune up one of these rigs???

My friends got some terrific Racal automatic antenna tuners (also fully
operational) at the same scap yard. Any info on these.

Thanks in advance for your direct replies.

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

It's a GO!

If you've ever wondered how you can improve your knowledge and skill at forecasting space weather and radio propagation conditions, this is your opportunity. This course is scheduled to begin on 18 March 1996. All persons interested in enrolling must do so by 04 March 1996 to be accepted.

This course is currently scheduled to be run only this one time (unless future support justifies doing it again).

Contact our WWW page: http://solar.uleth.ca/solar for more information. Send e-mail to: COler@Solar.Stanford.Edu for enrollment forms or to reserve a seat in this class.

CHECK OUT OUR NEW WORLD WIDE WEB PAGE AT:
http://solar.uleth.ca/solar

```

NOTES: "V" = Very High Fluence, "H" = High Fluence, etc, " " = No Data, "!" = Solar rotational boundary periods from current date. Electron fluence is flux integrated over time in units of cm^-2 day^-1 sr^-1 as

measured by GOES-8. Fluence values that are moderate or higher have
been correlated with satellite anomalies. Sustained high to very high
fluence has been correlated with serious malfunctions.

POTENTIAL SATELLITE ANOMALY FORECAST

There is a slight chance for a mild enhancement in energetic electron
fluence on 10, 11 and 12 February. If this enhancement is observed (and
there is some skepticism regarding it), moderate fluence levels may be
observed together with periods of electron flux exceeding 1,000
electrons/cm-2-s-sr near the local noon-sector of geosynchronous spacecraft.
The imposed satellite health hazard is not significant, but may be sufficient
to produce a few deep-dialectric charging related anomalies on susceptible
spacecraft. See the Potential Satellite Anomaly Warning issued on 09
February for more details.

>altimeter would add too much weight. Any suggestions?

There are a number of different things you can telemeter back that
would be of interest. You can let a phototransistor peer out the
side of the rocket and report rotation rate by counting sun crossings.
You can install a strain gage to report G forces. You can install a
mercury switch to signal when top of the arc is reached. Or you could
have a thermistor report temperature up and down. Even an altimeter
needn't be too large or heavy, if you're a bit clever. You can build
an altimeter the size and weight of a pea.

None of these are particularly well suited to Morse coding, however.
You're better off using voltage to frequency converters, tone modulating
the transmitter, and using frequency to voltage converters at the receiver
to decode the telemetry. If you pick channel tone center frequencies
carefully, you can send multiple channels of data at once.

Of course with a micro on board, you could digitally encode the
telemetry instead, and downlink it as high speed FSK, but simple
tone coding is useful when you only have a few channels of data
to send. Morse is too slow for practical rocket telemetry. The
ascent would be over before more than a very few characters could
be sent. Morse signaling is better suited to the leisurely ascent
of a balloon.

I fail to see how that could be. The notices were advisory only, with
no force. Someone who didn't like the notice could simply pitch it in
the trash. How could that possibly generate legal action?

Sure, I know you can sue for any reason, or no reason at all, but
over what is essentially junk mail?

2209. This Week in Amateur Radio #150 (for air through 2/16/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-10 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5-AJBJV.sanderman@delphi.com>
Source record: 230815

Here is a summary of news items covered on edition #150 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 16-Feb:
-
1. Telecommunications Reform Act Provides for Sweeping Changes
2. New Vice Director Appointed in ARRL Atlantic Division
3. RAC Maritimes-Newfoundland Section Manager Re-elected
4. Shock Tests Completed on Phase 3-D Specific Bearing Structure
5. Amateurs Test New Bosnia-bound Military Station on 1670 kHz
6. "Amateur Radio Newsline" - Edition #965 from Los Angeles
7. AMSAT-NA Announces Winners of 1996 SKN "Best Fist" Award
8. Misplaced Decimal in FCC Bid Proves Costly for PCS Providers
9. Several Notable Hams Listed as Silent Keys
10. Government Conducts "HAARP" Alaska Tests, Disturbs Ionosphere
11. Upcoming Special Event Stations with George Bowen, N2LQS
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
13. "The RAIN Dial-up" from Chicago
14. Voyager Mission Update
15. Weekly Propagation Forecast
-
Funding for the program's transmission and production expenses was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace
North Dakota, who carries "This Week in Amateur Radio" on the WA0ZOK
repeater on 443.75 MHz, serving Fargo, North Dakota, Morehead,
Minnesota, and the Red River Valley.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Satellite space and uplink services are provided by Skyvision,
Incorporated as a service to the amateur radio community. Further
information is available from George Bowen, N2LQS, at 518/283-3665
(e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-

6809 (e-mail sanderman@delphi.com). You may also reach them @
WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

If you will look in your history book you may find that when the Japanese were bombing Australia and getting ready to invade, it was the USAF that helped stop them. The Australian govt was going to evacuate the entire top half of the country and it was MacArthur who instead proposed attacking New Guinea instead. The Japanese advance was finnally stopped on the Owen Stanly Ridge up behind Port Moresby.

-.-.--.- -.-.--.- -.-.--.-

Living in earthquake country, i can't help but think of the times
people have been trapped in rubble and tapped out S O S to attract
help. Or what about POW's using CW to communicate with one another
while in solitary? Just because other forms have cropped up, doesn'nt
mean CW can't be useful at some point. Any thoughts on that angle?

I think some middle ground would be reasonable. Maybe give a small
segment of the HF bands to no coders (like me). Naw then again, it
only took me 2-weeks to get to 7 wpm. Taking the test this weekend.
It wasn't that big of a deal....and you never know about those
earthquakes.

And the fact that hams police their airwaves and WILL take action to
find the illegal transmission. Honesty is also a very important virtue,
most of us have it fortunately.

The threat is very real too and expensive. Remember, it's a FEDERAL
crime, not some petty little local law where you get a slap on the wrist.
They stopped caring about CB and look what happened to it.

Amatuer Radio won't be hurt by the internet. Big difference in types
of communications. Where's the challenge in internet communicating? There
are none. EVERYONE can do it now. We can e-mail someone on the other side
of the globe and it gets there in seconds. No challenge. The skills
required are minimal. Nope, amatuer radio will be just fine.

>>
>>This is a fringe hobby...don't sweat the licenecse requirements. Not too

Well where I live we hear new hams on the air all the time. It may be
fringe compared to some other hobbies but I think it's popularity is still
pretty high. People should be glad we're out there and more than willing
to provide help should they need it. The "net" is not a threat and ham
radio is alive and well!

I wonder if running a couple of wavelengths of 50 ohm coax then a couple of wavelengths of 75 ohm coax, repeat, repeat etc. would have the desired effect?

Initially it sounds like a good idea. My only concern is that a non-amateur licensed person with internet phone capability could access your repeater. Limiting access via the internet would be next to impossible. Reversing the access (eg. a licensed amateur being able to access internet phone via your repeater) might be an interesting concept.

What we need to recognize is that Amateur Radio and the Internet are
not mutually exclusive!! I look at both complementing each other in
emergency communications, in information exchange, and in just plain
fun.

Eric I read your article with much interest and would like to offer the following suggestions. First get back issues of QST and read in depth about the Loma Prieta and North Ridge Earthquakes and the Typhoon that hit KH6 land in the 70's. Local communications was swamped and the Amateur Radio Community handled thousands -- let me repeat that -- thousands of vital messages. In the 80's floods hit the Santa Cruz Mountain area and I handled several dozen messages from people in shelters who had no other means of communication to the bay area. Several people drowned and people were frantic to hear of their loved ones. I am sure all of them would disagree with you.

Second I would like to comment on the mindless QSO's that you seem prone to engage in. You reap what you sow, my friend. On the airways, I have had conversations with a Professor at UCI who is a world renowned authority on the ancient greeks. A qso with an anthropologist in Belize studing the Indian ruins. A qso with a British soldier in the Falklands re the polar explorations in that area.

A qso with a B-17 gunner during WWII. A heart-breaking QSO with a survivor of the Bataan Death March. A hydraulic engineer in a diamond mine in South Africa. Many many QSO's with a minister on Pitcairn Island about their history,the Bounty and current conditions there. And many more.

Do any of the above interest you ??? I didn't think so.

Rod

> Amateur radio was once
>the only practical way for the common man to talk to others far
>away. That's no longer the case.

This may have been a byproduct but it is hard to interpret the US ARS policy as this being a product of intent. It seems that the US policy was to protect the fledling broadcasters and wire services from being usurped by amateur offerings. Hence, we find severe restrictions on traffic content and third party participation. It seems only ham-to-ham communication was encouraged thus making it *impractical* for common man to talk to others far away.

Experimentation, proving ground, back-up emergency communications, international goodwill, yes. A cheap dodge around common carrier charges and tarrifs for the common man, no. And it appears that those wanting to transform the ARS to such have caused more harm than good by driving it toward a "personal radio service".

Try radio shack (model 21-506) dc-500Mhz 15 watt dummy load. I just bought 2
from a local RS who claims there are super discounted becuase they are being
discontinued. They cost me $4.80 each. Great little widget and cheap.

>*Any* coherent signal will show up on the tuning display
>of a digital station.

Well, that's simply not true, and Gary knows better. The actual fact of the matter is that most "coherent" (that is, coherent to the grey matter)
signals will NOT show up at all on a digital tuning display. Unless one happens to be tuned VERY closely to the proper frequency. Experience teaches
that the not "hearing" of a close-by signal often results in a sudden additional signal which arguably translates into a Part-97-illegal signal...

Now we can argue for a ridiculous amount of time what constitues "coherent"
and what constitues "proper frequency", but if the goal is to avoid interfering with our fellow radio amateurs, in the pubic interest, then the
obvious way to DO that is to listen. Which does not translate in any way, shape, or form to watching the leds on a tuning display. And that's because
those leds won't even show the signal that you'll be interfering with, should
you insist on doing it the way that's been described here, rather than listening.

Having said (typed) all that, I'm the first to recollect that, while handling
third party traffic on CW, I've often been interferred with by automated digital transmissions. Holding no grudge whatsoever, I simply moved my partner and I a smidgen so as to avoid being interferred with, as well as to
avoid causing undue hardship to my fellow radio amateur utilizing a digital
mode. That's another of the benefits to utilizing the ancient mode of OOK that to date hasn't been matched by the digital modes.

OTOH, modes like CLOVER, which can automatically cut back the power levels of
BOTH ends of the QSO, result in a friendlier, more Part-97-compliant situation, which is something that OOK rarely fails to accomplish.

It looks to me like Andrew takes ordinary Heliax and mills
slots in the cable. "Holes are milled in the corrugation
peaks of the outer conductor to form the radiating cable."
p.564 of their catalog 36. I also recall that you considered
Heliax to be ordinary coax, and not something exotic.

Why the need for different value couplers? After all, with the
commercial product aren't all the slots the same size, so that
the coupling factor is the same? Of course, you probably want
to feed it in the center and perhaps vary the coupling in a couple
spots to optimize coverage.

2233. Make money fast It really works I didnt believe until I tried

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-10 00:00:00 UTC
From: make@money.fast
Message-ID: <4fj9bl$436@castle.nando.net>
Source record: 230839

I've got some awesome news.I FINALLY FOUND IT And I HATE GET RICH QUICK SCHEMES!!
when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out
$14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Visa...I was desperate for money!! Ok, so the $50,000 in cash was maybee a tough amount to reach, but it
was possible. I knew that I could at least get a return of $1,000 or so.
So I did it!! As per the instructions in the article, I mailed out a single dollar bill to each of the five
people on the list that was contained in the article. I included a small
note, with the dollar, that stated "Please Add Me To Your List." I then
removed the first position name of the five names listed and moved
everyone up one position, and I put my name in position five of the list.
This is how the money starts rolling in! I then took this revised article
now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND
LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I waited to watch
the money come in...pre-
pared to maybe receive about $1000 to $1500 in cash or so....But what a
welcome surprise when those envelopes kept coming in!!! I knew what they
were as soon as I saw the return addresses from people all over the world
I received a total of $26,947!!! I couldn't
believe it!!

You must follow through and repost this article
everywhere you can think of! The more postings you achieve will
determine how much cash will arrive in your very own mailbox!! It's just too
easy to pass up!!!

Let's review the reasons whoy you should do this: The only cost
factors are for the five stamps, the 5 envelopes and 5 one dollar bills
that you send out to the listed names by snail mail (US Postal Service
Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all
the newsgroups and local BBS's you can. Then sit back and, (ironically),
enjoy walking (you can run if you like! :O) down your driveway to your
mailbox and scoop up your rewards!! We all have five dollars to put into
such an easy effortless investment with SPECTACULAR REALISTIC RETURS OF
$15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY
NUMBERS FOR TODAY, EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM
McDONALD's
AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTM NOW!!! YOU
CAN'T LOSE!!

So how do you do it exactly you ask? I have carefully provided the most
detailed, yet straightforward instructions on how to easily get this
under-

way and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!??
HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name toyour list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a beat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill, (no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will assure its arrival to its recipient. THIS STEP IS IMPORTANT!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Pos-ition 2 name will move to the position 1 slot , position 3 will now be-come position 2, 4 will be 3, 5 will be 4. Now put yiur name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as soon poosible. Give a catchy description of the file so its gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FOURTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!!! Set a goal for the number of total uploads you'll pos, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people hto receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the file menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to lview this file using Microsoft's Notepad for Windows's 3.x or WordPad for Window's '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, your're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "Post" a
messegeaon a newsgoup asking how to post a file, tell them who your

Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box,
choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paychecks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!" You'll never get ANY responses.

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON ITS WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream to loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILL AND DEBTS and then get that somthing special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when ou get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and poss-
ibly some bew places you now of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

NOTE:
Try to keep a list of everyone that sends you a dollar and always keep an eye on the local posting of this file... Just to make sure that everyone is playing the game fairly. You know where your name should be....

***AGAIN, HONESTY IS THE BEST THING WE HAVE GOING FOR US ON THIS PLAN.

-sincerely Amy Sanderson

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the people already included, you will not get much. I know someone who did this and only go about $15 (andn that's after two months). Then he sent the 5 bills, people added him to thier lists, and in 4-5 weeks he had over $10000! All the lists are re-distributed as soon as the money is received.

I will certainly ditto that respose you recieved on the condition of the 10 meter band. I is kinda dead. I did spend a lot of time scanning the band for about 2-3 weeks to try to contact 10 10-10 members to get a membership in there 10x10 club. It sure seems dead but when open I find some of the most friendly and neat people, good luck Ed Gisnberg Ke6BNL 10x10 67327

2236. 40 METER QRP BEACON THIS WEEKEND

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-11 00:00:00 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1996Feb11.033600.24053@VFL.Paramax.COM>
Source record: 230748

I am running an experimental QRP beacon on 40 meters starting Saturday
Feb 10 through Sunday afternoon Feb 11.

The beacon will be using an automatic power sequencer which will permit the
beacon to operate at several different power levels during each hour.

Start time : Saturday Feb 10 4 PM EST (it is on now)

Ending time : Sunday Feb 11 5 PM EST

Location : Newtown Square PA FM29hx (about 15 miles west of Philadelphia)

Antenna : 40 meter inverted vee @ 50' running in a north/south plane.

Frequency: 7021.0 KHz

Power schedule: The beacon power level will be changed during each hour
according to the following schedule:

minutes past
the hour - power level-
:00 - :01 2000 mW spotting signal
:01 - :15 200 mW
:15 - :16 2000 mW spotting signal
:16 - :30 20 mW
:30 - :31 2000 mW spotting signal
:31 - :45 2 mW
:45 - :46 2000 mW spotting signal
:46 - :00 200 uW (0.2 mW)

In other words... The beacon will run at 5 different power levels each
and every hour. Every 15 minutes on the quarter hour, the beacon will
run for 1 minute at 2 watts output for spotting purposes then run at the
specified power level for the next 14 minutes.

Power change times should be pretty close, however, the power will not
change until the message in progress completes.

Message format : VVV VVV VVV xx mW <4_letter_codeword> DE WA3NNA/B QRP
Sent at 13 WPM.

A different codeword will be used at each of the 5 power levels.

Test your receiving skills! The 200 microwatt level has already been
heard in North Carolina.

All reception reports will be appreciated. I am looking into setting up
some kind of acknowledgement certificate for those who successfully copy
the power and codeword at various power levels. Details TBD.

Please do not tell anyone the codeword that you copy.

73, and happy listening

SAR listens for *any* tapping sounds in the rubble, SOS is of no
more value than any other banging you can do. And POWs in the Hanoi
Hilton used the POW code, not Morse, to tap out their messages.

(The POW code is one tap for 'A', two taps for 'B', three taps
for 'C', etc. It's not as efficient as Morse, but has the advantage
that anyone who knows the alphabet can use it.)

The problem with tapping Morse is to differentiate a tap meaning
dot from a tap meaning dash. Since Morse is a temporal code, you
need some way to signal strike and release, not just strike, so
that you can tell the *duration* of the Code element.

Try sending Morse to a friend by just tapping a pencil on the
desk. Don't let him look. See if he can tell the difference
between an I and an A. They sound the same, just two taps.

From: rrk@indirect.com
Message-ID: <4fjvvg$58e@globe.indirect.com>
Source record: 230751

Most of the technical infromation on the NABER test can be found in the Radio Amateurs Handbook published by the ARRL. However, you'll need something else for the regulations.

I found the study guide to be quite useful for the test and it was worth the $20 (non-member
price). The FCC Rules, Regulations and Licensing guide (about $23) contains information also found in your public library in the section where the Federal regulations are stored. You will need to know all the code numbers to do this so the book makes things much easier.

BTW, I passed the NABER test first try using their study guides. It sure was a lot easier than
the FCC General Radiotelephone :-).

Source record: 230753

I'm seeking a volunteer that would like to help me test a Freeware
product from ELF Communications called WinTalk. The program enables users with
dialup connection to the internet to be able to call each other and
communicate in a realtime radio teletype like enviroment. May come in handy
to talk to far away relatives! If you are interested in conducting this test
with me please contact me by posting a message to this group or E-mail me.
The WinTalk program version 1.25 can be downloaded from the vendor's ftp site:
ftp.elf.com
/pub/wintalk/WTALK125.ZIP

2242. CW ops: What tone do you use?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-11 00:00:00 UTC
From: cwhiffen@atl.mindspring.com
Message-ID: <4fkt53$lh7@brickbat.mindspring.com>
Source record: 230754

What tone do you set your receiver to when digging DX out at the ESP level?

I suggested to TimeWave that they should provide a narrow CW filter with center frequencies down to 200Hz. To which their salesman responded that I was the only Ham that had ever asked about that and implied that I had something wrong with my ears. This has forced me to review my position and defend my contention that ESP level signals and signals in QRM are easier to copy at lower audio tones.

Having been a musician of sorts in my youth (poor technique and no talent) I think a musical analogy might be the easiest to explain. The assumption is that our ears' ability to discern a signal, either being interferred with by nearby signals or buried in the noise, is probably the same as our ability to discern notes on the musical scale. One musical interval, i.e. one note, at 700Hz (where the rcvr mfgrs think we should copy code) represents about 83Hz wheras at 200Hz it represents about 22Hz. Therefore, at 700Hz we should be able to identify our desired signal with an interferring signal 82Hz away, wheras at 200Hz we can achieve the same level of recognition with the interferring signal only 22Hz away. This represents a significant improvement in situations where QRM is high. In the case of noise alone: at 700Hz & 100Hz bandwidth we get just one or two notes so, which note has the Toni? (shows my age doesn't it?) I mean we only have two notes for our ears to choose between because all the noise is within that bandwidth and its only a little over one note wide, so our ears perceive the noise to be right on top of our desired signal. The same bandwidth at 200Hz center frequency has the same band-limted power but, on the other hand, it is spread out over 5 notes (thats enough to play "Mary had a Little Lamb") so our ears have more to work with. Does that mean the effective bandwidth, including ears, is only 22Hz? (I realize the average ear response can be down up to 20dB at 200Hz but we have volume controls to take care of that.)

I have a friend that eschews the use of any filter believing that his ear is a much better filter than any electronic device (although he has an acknowledged hearing problem, and, therefore, copies at higher tone frequencies.)

What do you think; should I go to the ear doctor?

Clay, KF4IX

That frequency is right in the middle of the novice/tech SSB portion of 10 meters. Should be a good place to monitor!

True..

> And POWs in the Hanoi Hilton used the POW code, not Morse, to tap out their messages.

>(The POW code is one tap for 'A', two taps for 'B', three taps
>for 'C', etc.

Don't think so.

> It's not as efficient as Morse, but has the advantage
>that anyone who knows the alphabet can use it.)

I believe the POW code was a 5 x 5 matrix of 25 letters of tap and
scratch. A tap is a dot and a scratch is a dash. Was a very
effective means of communication between the POWs and it is very easy
to differentiate between the two...try it..tap...scratch... A lot
more efficient than tapping the corresponding number for each letter
of alphabet.

1 2 3 4 5 <Scapes)
1 A B C D E
2 F G H I J
3 K L M N O
4 P R S T U
5 V W X Y Z
^
T
a
p
s
-

Something akin to the matrix above. Not sure at all of the accuracy.

>The problem with tapping Morse is to differentiate a tap meaning
>dot from a tap meaning dash. Since Morse is a temporal code, you
>need some way to signal strike and release, not just strike, so
>that you can tell the *duration* of the Code element.

tap scratch scratch scratch = C
tap tap tap scratch scratch scratch scratch scratch = O
tap scratch scratch scratch scratch = D
tap scratch scratch scratch scratch scratch = E

>Try sending Morse to a friend by just tapping a pencil on the
>desk. Don't let him look. See if he can tell the difference
>between an I and an A. They sound the same, just two taps.

Try tap..scrape for A and tap tap for I...Anyone should be able to tell the difference, even those who have problems distinguishing the difference between a tonal dit and a tonal dah.

The table above may not be exact but you can see the principle of that code.

Just thought you might be interested in this little tid bit of information.

>Heliax to be ordinary coax, and not something exotic.

Yeah, I do, and I've got access to a mill too, but I don't think
it's practical to mill such a cable unless it's pretty short.
The mill table is finite, so to mill a long cable you're going
to have to do repetitive setups that would be very awkward to
do. You need a special machine, like the one Andrew uses, to
make doing it practical. And of course you want to mill it
before you put the jacket on so that it will still have some
environmental protection.

And of course I wouldn't even want to think about milling flexible
cable with a braid shield. You really need the slots *woven* into
the weave for that.

>> There is another way. You can use drop fittings in the line and

>commercial product aren't all the slots the same size, so that
>the coupling factor is the same? Of course, you probably want
>to feed it in the center and perhaps vary the coupling in a couple
>spots to optimize coverage.

Using the different value drop taps would give a more uniform
field strengh along the length of the cabled hallway. Feeding
it in the middle would reduce the number of different tap values
required, and is a good idea if it is physically possible. Radiax

doesn't do this, as you note, and field strength isn't close to constant along its length. That may or may not be a problem in a particular application.

I just had another idea for doing this that might work pretty well. If you use braided coax, and insert an insulated wire through and up under the braid every few feet, letting the outer end dangle, you'd have a similar system. You could adjust the "tap" by how much of the wire you slipped under the braid, and the dangling end could serve as a vertical radiator. That might be practical and cheap.

Comments? Brickbats?

>ham communication was encouraged thus making it *impractical* for
>common man to talk to others far away.

Only if you interpret amateurs as other than common men. Amateur radio isn't restricted to the rich, the powerful, or the well connected. The average citizen can get a license and buy or build a radio station that allows him to talk to other average citizens in other parts of the world who have done likewise. One of the 4 major purposes of the ARS as outlined in its charter is to enhance international goodwill through people to people contacts. This is in contrast to diplomat to diplomat contacts in that ordinary "common" people are involved directly in talking to their opposite numbers.

The net usurps this role to an extent because it is less restricted (so far) in who may participate, IE no license required, and what they may discuss. It's also more available and more reliable than HF in many cases. So I'd contend that the net is better suited to facilitate the people to people communications that were once nearly the sole province of amateur radio.

That's probably all to the good, because HF amateur radio has devolved to be a province of gamers who only exchange enough information with their opposite numbers to get a postal card, sometimes generating international ill will in the process. So the people to people aspect has been pushed into being a small fringe activity, fitting in the cracks left unfilled by the gamers and their activities.

Similarly, experimenters have been pushed into small niches on HF as well, but many of them (never a large number in an absolute sense) have moved on to the UHF+ spectrum anyway, where they can experiment relatively unhampered by the Dxer and the contester, and by sometimes absurd regulatory limitations. (That's a pity, because there are still some interesting experiments left

to do at HF with SS and other digital methods of dealing with the fading and impulsive noise corrupted channel.)

Well, the first suggestion is to check over at rec.models.rockets for the
same information. I've directed followups over there...

While I have no specific part numbers or anything like that, a reasonably
competent homebrewer like yourself should be able to scare up something (I'm
basing that on the fact that you have figured out how to interface your Z8
to the transmitter already):

- a simple pressure transducer
- a temperature transducer
- a photo diode pointing out the side
- is an altimeter really that heavy?
- how about a transponder...?-)

I'd be interested in finding out more about your basic setup!-)

>
>It can be still be used as a vehicle for experimentation, or a means of
>providing a public service. But in the end, its a hobby just like fishing.
>Is that bad???

Yes, I think that's bad. To an extent, you are correct that amateur radio has devolved into just a game, like trophy hunting, or a bass fishing contest. It may have entertainment value for the participants, but does it have enough value to the public interest, the national interest, or the international interest to preserve the service? The spectrum consumed by amateur radio has vast commercial value. Can we justify retaining it merely on the basis of a game? Unlike fishing, where the waters used have multiple uses (hydropower, urban drinking water supply, transportation, etc), amateur spectrum is blocked from other uses as long as amateurs occupy it. So amateurs need a better justification than recreation to keep such a valuable resource.

>Consequently, the structure we use to license new hams also needs to evolve.
>I think that a new potential ham ought to be tested for proficiency in
>the areas they intend to operate. Tests wouldn't necessarily be easier,
>just pertinent to the operating priveledges sought. Many of the people
>I see at our VE sessions are just looking for a reliable means of local
>communication.

Then you should direct them to the nearest cellular phone service provider, or to the nearest provider of GMRS equipment. The amateur service is ill served by those who just want to use it as a substitute for commercially available services of equal or better utility.

OTOH, if they want access to spectrum for use as a learning laboratory, for use in public service, for use in RF experimentation, or for use in support of exploiting other new uses of communications, then they've come to the right place.

>Where do I suggest putting the CW testing? Right where it belongs, to qualify someone to operate in CW only sub-bands.

There are only two, and neither requires a Morse speed test to access now (50.0-50.1 MHz and 144.0-144.1 MHz are the only CW only subbands in amateur radio).

I have some treasures for sale that I just can't
haul around with me anymore...

The prices are subject to negotiation :)
Best offer takes it..

COMPUTER EQUIPMENT

IBM Personal PC -- 2 each. $20/both
One is complete, the other is parts

IBM XT, CGA monitor, 20MB hard drive $80

Sun Microsystems monitor $50
19" b&w.. in the box

TRS-80 Model IV, $25
2 5.25 floppy, 128K memory

Televideo TVI-925 terminal $20

AT chassis FREE!!

MFM drives.. $5/each
various sizes, 20, 40, 60, 80Mb

PRINTERS!!!!

Diablo 620 $50

Radio Shack DMP-500, 14" 220cps DM $50
in original box

Panasonic KX-P1180 $50

ELECTRONICS GOODIES

Western Union Telefax Transceivers $50/pair
Model 6500-A, proprietary protocol
interesting little beasties...

Varian X-Y Plotter $20
DB-25 input..

Tektronix Oscilloscope $50
Model RM545B, with 1A1 Dual Trace module

>Well, that's simply not true, and Gary knows better.

Yes, that is an overly broad statement. Coherency alone isn't sufficient.
A spread spectrum signal is coherent, but won't necessarily be detected
on a tuning diplay for narrowband digital. But any signal with a line
spectrum will, and that includes OOK Morse.

Some while back I read a post, probably on this newsgroup regarding an old magazine article. It was supposed to be about the excuses that hams use to end a QSO when they can't find a polite way to tell the other party that they are bored. It was titled something like "Sorry OM, I Have to Go Chase Elephants from the Garden."

I would really like to read this article, as it sounds very funny. I have asked some folks at ARRL, however, they were not familiar with it having been in QST.

Does anybody know where and when this article was published? Or better yet, have it in electronic form that they could e-mail it to me? Thanks in advance for any responses.

From: david_b3@sfov1.verifone.com
Message-ID: <1996Feb11.144209.4797@sfov1.verifone.com>
Source record: 230773

Well, I'm trying to home in on a 2M mobile rig, and have a few questions that maybe some of you could answer:

1. Kenwood T-241A -- I've heard that the RF has a tendency to go bad, epsecially if you transmit too much of the time you're on the air. Is this true, or did I just misunderstand the emails?

2. Are any of the earlier Kenwood 2 meter models available still? I really just need a basic unit, and if I can save some bucks, I'll go with a previous version.

3. What is the difference between the Yaesu FT 2500 and 2400, other than the obvious facts that one is mil-spec and is noticeably larger? I'm looking for something a little more compact than the 2500, but if it is that much more solid than the 2400, I might consider it. Is there a difference in price between these two?

4. Do the Yaesu and Kenwood models store out of frequency settings? The RS HTX212 doesn't, which is a bummer, since I like to listen to the weather transmissions. However, this unit seems to get good reports. at $349, it's a little more expensive than the 2500 ($319) and the TM241A ($330 minus $65 rebate).

Thanks for the input.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL Letter, K1KI, WA4JQS, KK6H, K9EC/4, WL7MY, WE9V, DF4RD, DJ5JH, I1HYW, PS7AB and G4BUE & DX News Sheet for the following DX information.

4K2, FRANZ JOSEF LAND. The DX News Sheet reports Sergey, R1FJZ, is often active on 3503 kHz and on 160 meters between 1100-1200z. He has worked 170 EU and JA stations on 160 meters but only VE1ZZ and KL7RA in North America. Stateside reports from the Ohio/Penn Network also show his activity on 7003 kHz between 1230 and 1330z and on 14243 kHz at 0915z. Sergey will be going QRT in August and the Russian government may be discontinuing their Arctic bases making further activity rare.

BRAZILIAN NEWS. Rony, PS7AB, reports to look out for the following stations and islands that will be active:
Imbituba Lighthouse (DFB SC-09) - Look for ZW5IZ from February 15-25th. Activity will be on SSB/CW with operations on 80-10 meters.
QSL via PP5VB: PO Box 13, Imbituba/SC, 88780-000, Brasil.
Trindade Island (IOTA SA-010, DIB-02, DFB OC-04) - There will be activity from PY0TI between February-May. Activity will be on SSB/CW with operations 80-10 meters. QSL via PY1UP:
Rua Alfredo Becker 536, Bloco 5, apt 1101, Sao Goncalo/RJ, 24452-000, Brasil.
Grande Santa Izabel Island (IOTA SA-025, DIB-19). Be looking for ZW8P February 16-20th on SSB/CW. Operations on 80-10 meters. QSL via PS8DX: Av. Dom Severino 846, Teresina/PI, 64049-380, Brasil.

BV9P QSL CARD UPDATE. Steve, KU9C, has just heard from Wayne, W4MPY, that 261 pounds of QSL cards for BV9P left his QTH on Thursday, and Steve should be receiving them soon. He plans to have all QSL card requests that do not require serious log searching out by February 29th with the help of Ralph, K2PF. The card that everyone will be receiving is a beautiful folding card with several pictures of the May/June 1995 DXpedition crew and the island

itself. The back side gives a lot of details on the BV9P operation. For those of you who can't wait to see the card, Wayne, W4MPY has offered to provide a scan of the picture side of the QSL card on his home page: http://www.mindspring.com/~w4mpy
This card will be used to confirm QSOs from all three BV9P operations to date.

FS, SAINT MARTIN. Paul, WX9E, will be active from the QTH of FS5PL beginning on February 12th. He will be using FS/WX9E except during the ARRL DX CW Contest. Mike, N0BSH, and Chad, WE9V, will join Paul and be active from February 22nd to March 6th and sign FS/N0BSH and FS/WE9V. The group will be active on CW/SSB on all bands 10-160 meters including WARC bands. Chad will also make a special effort to activate FS on RTTY. The group will be active for the CQWW 160 SSB contest for a Multi-Op effort. The group will also operate in the Multi-Two catagory for the ARRL DX SSB Contest. All contest efforts from FS will use the call FS5PL or a special call not yet known. QSL FS/homecall via the homecall using the new CBA. QSL FS5PL (or special contest call) via WX9E, for both the CQWW DX 160 SSB and ARRL DX 1996 contests "ONLY".

HS, THAILAND. The DXNS reports John, HS0ZAA, has written the rules for HS stations to operate on 80 and 160 meters and submitted them to the Frequency Board.

NEW PREFIXES FOR NEW UK HAMS. The ARRL Letter reports that new M-prefix call signs will start showing up on the bands this spring. The United Kingdom is running out of the familiar G-series call signs the government has issued since the 1920s for most UK stations.
The Radiocommunications Agency will begin issuing the M-series calls starting April 1 to all new full licenses (both Class A and B). The first call sign, M0AAA, has already been awarded to the Reading and District Amateur Radio Club (on behalf of the Reading Novices Amateur Aerial Association). RADARC reports it will use the club-station version of the call, MX0AAA, beginning April 1 and offer a special QSL card to mark the occasion.
RADARC says the UK's Radiocommunications Agency will follow the same prefix pattern it's used for the G-series calls over the years:
MW stations will be in Wales, MM will be Scotland, MI for Northern Ireland, etc. Existing G stations are not affected by the move to the new call sign block.

NL7, BARREN ISLANDS (New IOTA). Richard/N6IV/KL7, John/NL7TB and others will again attempt to activate these new islands for the "US Islands Award Program" and the "Islands On The Air Program". Their main goal will be to totally concentrate on Ushagat Island, the largest of the seven island groups. The team will depart from Homer, Alaska, and plans to be active on the July 5-8th. Operations will be mainly on 14260 khz, but the team will be using a vertical which can be used on 40 meters also. Weather will play a major factor in this operation, but the team has made provisions to "wait out the WX" for several days if needed. QSL NL7TB direct only to the 1996 callbook. ADDED NOTE: Time and weather

permitting, the team plans to activate islands for the "Canadian Islands Awards Program" on the return trip. VY1ISL may be used in the Yukon.

QSL MANAGER'S ADDRESS CHANGE. Mike, K9EC, QSL Manager for VS6WO has recently moved from Chicago to Atlanta. He wants to inform OPDX readers that his callbook address is no longer valid. All QSL requests for VS6WO should go to: Michael Zeug K9EC, 3850 Sugar Pike Rd, Canton, GA 30115. QSLs via K9EC at the 9th call area bureau are OK. Please do NOT send cards directly to VS6WO at the Hong Kong bureau! It takes a year or more from the time those cards get to the Hong Kong bureau before they make it back to Mike! Mike would also ask all DXers waiting for VS6WO QSLs from the 1995 CQWW Contests to please be patient. He is expecting to receive the logs for those contests very soon and QSL cards will be sent out as soon as possible after he receives the logs.

V4, NEVIS. Mike, N0BSH, will be active from here from February 14-21st, which will include an all band entry in the ARRL DX CW contest. He has applied for the callsign V47NZ. His activity will be CW (mostly) and SSB on 10-160 meters including WARC bands. QSL via N0BSH: Michael Tessmer, 1702 1/2 Loomis Street, La Crosse, Wisconsin 54603

VK6, LACEPEDE ISLAND (NEW IOTA). Malcom, VK6LC, will be active sometime in May. This island is loctaed in the Western Australia State (Northwest Coast) East group. These islands are very remote and will take up to 6 hours to navigate through 4000 kms of dangerous tracks. This expedition will cost $5000 (US) in which Malcom will bear most of the cost. The Diamond DX Club is trying to help raise $1000 (US) in donations to help pay for this DXpedition. Contributions can be sent to the Diamond DX Club, c/o I1HYW, Gianni Varetto, P.O. Box 1, 10060 Pancalieri, (Torino), Italy.

VK0, HEARD ISLAND. Tony Deprato, WA4JQS/VP8BZL, and founder of the South Sandwich Island Antarctic DX Group (SSIDXG), has informed the DX community that with the reactivation of the KK6EK and ON6TT Heard Island DX group's plans to go to Heard Island, SSIDXG has decided to step aside. SSIDXG had planned to land on Heard Island this year for a three week operation. Tony stated their landing date was set for December 2, 1996. SSIDXG had transportation worked out for their operation along with shipping arrangements for all their equipment and gear to the shipping company. SSIDXG cited the following reasons for stepping aside:

1. A MAJOR SPLIT would come about in the DX world as DXERs would have to make a decision as to which group to support.
2. That the other Heard Island group left their gear in VK-LAND and would either have to have it returned at an additional expense to their group. This would not be fair to anyone or group.
3. Since a joint effort had been refused the DX WORLD could not afford to support money wisely to two "HIGHLY EXPENSIVE DXPEDITIONS TO THE SAME ISLAND."

OPDX feels Tony Deprato and the SSIDXG should be commended for their great sportsmen attitude in this decision. OPDX will be looking forward to and supporting any SSIDXG DXpedition in the future.

VK0WH JANUARY LOG UPDATE. Jim, VK9NS, reports that he has received the log for January from Warren and he was very inactive for almost two weeks during the month. Warren is currently back on, but he prefers CW due to his receiver set up - he has lots of noise (man made) and finds SSB hard work. Check 7009 kHz around 1020z. All VK0WH QSL cards received to date have been replied to. There are a couple of "slim slots" effecting the W8 call area. No other reports will be made available until Jim gets back from Tonga on March 21st.

XX9, MACAO. Mine, JE1CTM, is planning a short trip here and hopes to be active from Taipa Island. More details will be published in the upcoming weeks.

ZA PIRATE. Wolff, DJ5JH, reports the call sign of his XYL, DJ8UY, has been used by somebody in July, 1995, and QSLs for DJ8UY/ZA have began showing up. Most are marked "via DJ8QP". Wolff states, "Do not waste your QSL for this one."

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Every time I key up a 2 metre rig in the house, the motion sensor
lamp up front goes on. Since the packet station is on all the time,
the light can pop up at any time of night; this is a minor nuisance.
Will a few carefully-located .001 caps, some ferrite beads, etc. make
the sensor less likely to false trip, or should I just scrap these
lumberyard specials and buy a better brand of motion sensor ?

Dear All,
Does anybody know where I can find the sources for SPICE?. Either in fortran
or C.

Regards

Robin Birch

Check the Linux archives ... the latest C spice (3f3, I think) is definately
on the InfoMagic 5-CD set. I'll bet TSX-11 or Sunsite has it as well. I also have
2g6 fortran spice here.

In the interest of our company image, I have included a copy of the
message received at Timewave from Mr. Whiffen, and my reply.

I was the one who responded to his enquiry. I am not a salesman. I am
an Engineer and have been in Electronics for 25 years. Further, I hold
an Amateur Extra Class license. I have worked in the Hearing Aid
bussiness and have looked at more Audiograms than I can remember. My
favoriite mode of operation is CW and I like to chase DX from my inner
city lot, so I know about noise and weak signal challenges.

Here at Timewave, we value the input we receive from our customers. Many
of those inputs drove the design of our new DSP-599zx. We encourage anyone
who has an idea to share with us about our products to feel free to do so.
We will, in turn, give you an honest reply regarding it, whether it's what
you want to hear or not.

73, John Hill, NJ0M

Believe it or not Clay, you're the first person who I've ever gotten
that suggestion from. I brought it up at the Marketing/Engineering
meeting today and was basically told that due to the small marketing
appeal of that feature, we would loose our shirts designing a box to
do that and only selling a handful. Changing our existing products
to accomodate the lower center frequencies is no small endeavor to boot.
Quite honestly, unless a large number of hams (>30%) ask for a feature,
it's quite unlikely to get encorporated. The engineers say there is no

way to modify an existing unit to do that easily. Out of personal interest, I tried listening to a few CW signals just now at 200 hz and had great difficulty concentrating on them. Not that copy was bad, but some kind of mental block. I do see how you could offset your IF to accomodate it and thus remove a lot of unwanted noise components from the passband, but I wonder if you are fighting the natural resonance of the ear, not to mention years and years of listening habit. Thanks for your input never-the-less. We never tire of hearing other peoples ideas on improving our products.
73, John, NJ0M

I brought up the 200 Hz CW center frequency again today at our Monday morning staff meeting. In the interest of providing what might be an enlightening revelation not only for us, but other Amateur equipment manufacturers, we have decided to take a proactive approach to this issue. We are interested in hearing from those Amateurs who prefer a lower (less that 400 HZ) CW note frequency. Send us an E-mail to dsp@timewave.com. We will tabulate the results and post them here.

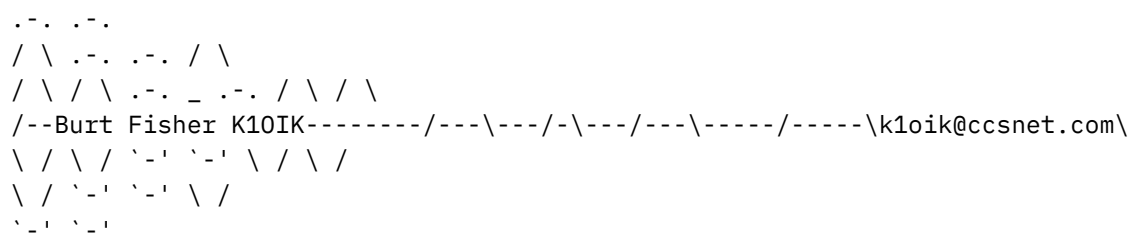
Of course 10 will now open. The ionosphere responds to monitoring.



2269. Alinco DX-70 hum on 6 meters

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-12 00:00:00 UTC
From: kingbp@ka1fqt.mv.com
Message-ID: <DMn8sE.Js3@mv.mv.com>
Source record: 230598

I recently purchased an Alinco DX-70T and have put it on the air. I've had it on HF (80m and 17m phone bands) and 6m FM. On HF the signal seems to be fine, received many reports of excellent quality audio. On FM, I have been receiving reports of a hum, even a strong hum when I transmit. In all cases I am using the same regulated power supply which is also brand new.

I am looking for suggestions as to what might be the cause of this. One ham suggested it might be rf feedback, or PL signal too high. The SWR is less than 2:1 across the 6 meter band. I am using a Cuscraft AR-6 Ringo antenna. Well if it is the PL signal is too high, I don't know how to resolve that and do not have the equipment to test for it anyway.

Thanks,

Bryan

So are you saying there is a correlation of technical knowledge to skill with CW?

The tests may not be easy IF you come at them from the viewpoint of "I want to learn the information." I defy someone to make a 25 question test out of a pool of 300 questions that I can't pass if I have the 300 questions. Well, that's not quit true, you could make one I couldn't pass, but then you would be making it so obscure that very few people could pass it.

Roger

I know this is going to sound simplistic - but having experienced feeder radiation because of a mismatch, it seems cables can be persuaded to radiate quite well by simply deliberate mismatching or leaving off the terminator altogether. The resulting standing wave current in the outer braid transmits all over the place! Why not turn the braid itself into a series of antennae?

I accept that cut slots or holes which have dimensions only a small fraction of a wavelength will "leak" in a more uniform and controlled way, but some of the alternative proposals eg. antennas spaced along the cable fed by couplers, seem functionally no better than contriving transmitting maxima along the length of the cable by standing waves, and its lots cheaper! In effect you have a whole cablesworth of little dipoles all in a long line joined at their end nodes (ie. at the current minima / voltage maxima points).

Yeah - I know, if it was such a good idea, it would have been done long before now....

My regards to Zack and Gary. My aplologies for messing up on the quote sequence up there - I don't actually know who started this thread.

I have spent hours experimenting with different frequencies to see if there
is one that is best for copying very weak signals.

My conclusions is that the only thing that works is to sweep the VFO back and
forth, continually changing the frequency, so that your ears don't get tired.

That is, when your ears get used to the current setting, you shift it slightly
until you notice a pitch change.

All the filtering, notch and passband tuning, in the world makes no difference,
indeed, sometimes it seems to bring up the noise level and mask the signal.

I have found it easier to copy a weak cw signal with a 6Khz IF filter, than
with the 200Hz, with DSP running.

YMMV

2275. Rptrs near SLC, UT Ski Areas

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-12 00:00:00 UTC
From: "C. Wheeler" <cwheeler@ccnet.com>
Message-ID: <4fo9gt$hrk@gaudi.lahabra.chevron.com>
Source record: 230604

Would appreciate it if anyone could pass on frequencies of any open repeaters (2m/70cm) that cover ski areas in the SLC area. Particularly in the Cottonwood Canyons (Solitude, Brighton, Snowbird, Alta).

I don't normally spend much time talking on the radio when I am skiing but I carry an portable with me - and it's nice to know that I can use it if I need to.

Thanks
Curtis

Hello i have an application which to make fly requires
very low power consumption.

The distance < 15 ft and bandwidth < ~300 Hz of the signal are very
unambitious but I would like the whole package (including the battery)
to be the size of a quarter (maybe two stacked together).

questions:
Are there any applications or products that approach/exceed this spec?

where do I go to get more info on current technology ?

thanks,

Ira

I'm sure this is a tired old question, but I must ask: Is there anybody out there that can give me reliable information concerning the operation of my dual-band HT in the Netherlands? I intend to travel there in May and I would like to know who to contact in the Dutch government to secure clearance for such operation. Now before everybody screams "ask ARRL!", I must tell you that I have sent email to that office over 3 weeks ago and have yet to receive a response. I need to get the ball rolling soon and I'm not sure I can wait a lot longer. Any advice you can give will be much appreciated. Reply here or through email. Thanks!

The *full* DTMF tone set is a 4x4 matrix of 16 tones. The A,B,C,D
buttons are the final 4 tones. They are typically used for control
purposes, for repeaters and the like.

>waters, what rules would apply?

My understanding on this....

In international waters, license requirements are that of the country under which the ship is flagged. If the ship is not of US registry then your FCC issued license may not be valid. I don't remember if reciprical aggreements apply.

So for example: If the ship is registered in Liberia, you need a Liberian license to operate on that ship while in international waters. And before anybody says anything - I don't know if the US has a reciprical agreement with Liberia that would apply (don't bet on it) or if Liberia even issues licenses - it was just an example.

Under part 97 - you must have permission from the ship's master to operate on board. Of course part 97 only applies in the FCC's "jusrisdiction".

2281. Ham Radio Online goes Interactive! Check us out!

Newsgroup: rec.radio.amateur.misc

INTRODUCING HAM RADIO ONLINE INTERACTIVE!
Now you can post free classified ads, DX openings, VHF band openings
and much more. And with over 10,000 readers stopping by last month,
your thoughts will actually get read at this ham radio web site! We are not
just pointers to cyberspace - we've got actual content - feature articles,
newsletters, product reviews, real-time propagation conditions and more.

The February 1996 edition of Ham Radio Online International Magazine
is available at http://www.accessone.com/~vbook/hronline.htm

Some of the NEW February stories include a review of SkyTel's "2-way paging" system,
radio surveillance frequencies, and the effects of two-way radio operation in blasting
zones.

Ham Radio Online has been selected as a featured web site by America Online
and a Top 100 web site for the month of January by Planet Earth, Inc.
New articles are available now and we add articles throughout the month.

Ham Radio Online has up-to-date news about Amateur Radio from around the world,
feature stories, real-time propagation and auroral condition reports, real-time
earthquake and severe weather conditions for emergency communications planning,
online humor section and the Ham Radio Online Library with fully indexed (find
any section with just a mouse click) Part 97 rules and regulations.

Plus we cover broadcasting, shortwave, scanning generally anything having to
do with radio telecommunications.

And we plan to offer some totally cool new services during the coming months. As
always its free and free of ads.

Thanks to you, we had over 10,000 readers stop by during January!

Please enjoy!

>being a place where everyone is checking up on you. This eagerness to
>bust vagrants, by reporting them to the federal government, smacks of
>vigilantism, and certainly would make one paranoid about going on the
>air.

It really isn't. Hams are by and large a friendly and helpful lot. But
the price of admission is a license. With the codeless Tech, virtually
anyone of reasonably sound mind can earn a license in short order. So
there's no reason why anyone should be violating Federal Law. If you
want to get in the pool, you have to show you can swim first. Not
perfectly, not well. Just enough to get around.

>While breaking the licensing law violates the spirit of professionalism
>and exclusivity of ham radio, I don't think that spying on fellow hams
>is a good solution to the problem. Shunning would work far better.

We don't spy. We sometimes check to see if someone's licensed if their
behavior indicates that they may not be. Don't think of it as a police
state. Think of it as Block Watch.

If you heard some of the filth that gets spewed by a small minority on the
ham bands--both licensed and unlicensed--not to mention deliberate
inteference, harrassment, jamming of repeaters, and other flagrant
violations of Federal communications law, you might not take this so
lightly. It's not just illegal, it's not nice either. And it reflects
badly on the rest of us.

The FCC no longer polices the bands to the extent that they used to, and
the general level of civility and repect for rules in the society at large
has been dropping steadily since the early 60s. If we're going to keep
our neighborhood clean, we need to indicate that illegal behavior will not
be tolerated.

> Ham radio has enough of an air of extremem conservatism (witness the
> editor of 73); why compund it by acting like agents in a polic

Listen on 75 meters or on some 2-meter repeaters if you think so. You'll
hear plenty of political opinions of all stripes. I suspect you are
correct that conservatives are more vocal on the bands, but that's the

trend these days anyway. This has nothing to do with being a police state. No one is going to lock you up or torture you for your opinions.

>Since one is on the "open sea" in int'l
>waters, what rules would apply?

When in international waters, the rules of the "country of registry" would apply, and additionally, the amateur would need the permission of the vessels master to transmit.

Example, suppose the vessel was of Greek registry.... he would need a reciprocal license from Greece to operate from the ship, and would need to comply with the regulations of the Greek equivalent of our FCC.

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* RS-12 NEWS *
==============
The Russian RS-12 Amateur Radio communications satellite has been in Mode
KT since 02-Feb-96. Mode KT takes an uplink on 15 meters and downlinks it
on BOTH the 10 meter and 2 meter bands. Before this change, RS-12 was in
Mode K, and the only downlink was on 15 meters.

The 2-meter downlink is strong, and allows better communications performance
for groundstations who experience difficulties in operating full-duplex on
the 10 and 15 meter HF bands.

[snip]
>What do you think; should I go to the ear doctor?

I think you're ignoring some important factors, Clay. For a given
(brief) tone duration, a higher pitch has more cycles for the
ear/brain to work with, and allows the wetware PLL to settle into
lock with it better. This is the classic PLL loop filter problem,
a loop filter with too narrow a bandwidth, IE passes only low
frequencies, has a long lock time compared to a filter with a wider
bandwidth, IE passes higher frequencies, but of course has a finer
resolution when lock is finally achieved. So higher pitch tones allow
faster recognition of pitch information than low pitch tones. (I don't
think I'm explaining this well, perhaps someone else can offer a more
intuitive explanation.) In any event, the ear needs several cycles of
tone to come to a good pitch lock, and for short duration tones, that
requires a higher pitch. Morse elements at a reasonable speed have a
shorter duration than a musical note, so experience with the musical
scale may be misleading.

Another factor is the frequency response of the ear. The SPL required for signal detection is much higher at lower frequencies than at higher frequencies (up to a limit where response starts rolling off the other way). The area around 1000 Hz is a sensitive one for the ear. Now you say we can just turn up the volume, but when we do that, we degrade the SNR because the amplifier contributes system noise of its own. If we are already in extremely marginal conditions, that may be sufficient to bury the signal in the noise.

It would appear that the pitch chosen by radio manufacturers has stood the test of time. If many people had found that they got better performance at lower pitches, that's where they would have demanded the filters be centered. That doesn't necessarily mean that 700-800 Hz is the ideal pitch for OOK Morse decoding by ear, but it is a strong indication that it may be.

Now I have a notch in my hearing response due to being exposed to lots of gunfire without ear protection in the late 1960s. So I need to shift the pitch a bit to be able to hear OOK Morse signals well, but that's a separate issue. I find I can hear the elements better at a substantially *higher* pitch. It wouldn't hurt to have your hearing tested. Then you would know the response of the system and could tailor signal pitch to it more intelligently.

Gary

Friend,

A fully functional standalone Broadcasting Radio Station Database for IBM and compatibles with more than 4,000 Radio Station records already. This program covers stations on Longwave, Mediumwave, and Shortwave. Each record contains the Station name, Frequencies, Schedule, Languages, Country, and Continent. The program sorts in same order.

What's needed to get it? Your EMail address and your Postal Mailing address for registration and future information via Post of other Radio Related Database programs. This information will be kept confidential.

If you can read a document written in MS Word(extension is DOC), request the operating instructions for the Radio Station Database Program called Voyageur. You'll get an idea from reading this document of the Voyageur Database and what it does.

Incidently, the program offered with this notice is valid until June 6, 1996.

Hope to hear from you..

Chuck

2294. Re: CW ops: What tone do you use?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-12 00:00:00 UTC
From: Hans Brakob K0HB <71111.260@CompuServe.COM>
Message-ID: <4fm6e6npf1@mhade.production.compuserve.com>
Source record: 230782

My preference is also for a lower frequency. I find the
700-800 setting on most transceivers to be far too high,
especially in 'ESP' conditions, or in crowded conditions.

My Timewave 59+ goes down to a center frequency of 400Hz
where is "just starting" to get right. Some of the new
transceivers (775 and 870 come to mind) provide more
flexibility.

In contesting situations, I frequently find myself using
the RIT on run frequencies. Not a perfect solution, but
it works when band activity will continue to support a
run.

>either. You guys are just looking for ham radio Welfare. It isn't here.

Typical Republican bs! The rightwing deregulators will be the first to eliminate the "bureaucratic" interference in everyone's right to make the radio bands useless. Unless they're too busy interfering in everybody's private lives under the rubric of "getting the government off our backs".

I suggest Mike do a survey of the anti-CW whiners and see if his thesis is correct. I'll bet ya a bushel of photons that the anti-CW crowd is pretty much the same political spectrum as the general public. Talk about not working for what you get--what about Republican wonder boy Steve Forbes?

>>*Any* coherent signal will show up on the tuning display
>>of a digital station.

Probably not Gary.

Most displays are optimized to be useful for "fine tuning" a signal already tuned to "in the ballpark", not for use as a monitor of general activity on the nearby spectrum. They are frequently limited to display signals which have passed through the filters and processing for the selected mode. As an example, some popular TNC's do not even have a tuning display but simply a DCD lamp which is illuminated only when a valid packet signal, properly tuned, is detected. This lamp will ignore any other signal. If it were the only means used to determine a "clear frequency", interference to other communications is likely to occur. A simple aural check of the frequency would be far more effective.

I had a letter from City & Guilds this morning regarding the RAE...

From 1997 there will be a single paper consisting 80 multiple-choice
questions. The syllabus remains unchanged.

I don't know how much it will cost, but hopefully the new single paper
will be cheaper than taking the two old papers (currently about £ 18 each).

Persons sitting the exam in May or Dec this year (1996) will continue to
take the two papers (100 questions total).

Anyone failing one part in December will have to resit the whole paper
in May 1997.

More details when I get them.

>>desk. Don't let him look. See if he can tell the difference
>>between an I and an A. They sound the same, just two taps.

Very interesting little tidbit of information. I actually realized
this same phenomenon as a new novice operator. I was watching the
famous movie "Grey Lady Down". The guy in the sunken sub (oxymoron?)
was using a wrench to "signal the guys outside in morse code". Problem
was, I couldnt copy any of it. Then it dawned on me. Unless he
used a combination of "tap and drag" of the wrench, the boys outside
couldnt really understand his directions. Would be interested to
know the POW code -- I've heard of whistling tunes to warn of
approaching peril (ie POP GOES THE WHEASLE for enemy approach, GRAND OLD
FLAG for all clear, etc). Guess that's getting outta scope on
rec.radio.amateur.misc.

73 all, good discussion.

Well, almost... For many years, Joe and the others have tried to discourage arrivals before the Friday at 3:00 p.m. opening time. This is where the $20 fee comes into play. Its purpose was to discourage those who insisted on showing up TOO early. Joe has told me that he has had some clowns show up as early as the Monday of that week!!! Why? Well, if you have been there you know there are only so many lots with running watter and bath ;}. But anyway, the answer is the Spring Hoss Trader's (not HossChester, DeerChester etc) is always the day before Mother's day. It's the spring Mecca of the NorthEast!

>Curtis
>Pleasanton, CA
>
Hi Curtis...
The Rocky Mountain Radio Assn. has several UHF machines, gateways, etc that
cover the areas in question.

448.700 SALT LAKE and UTAH (Provo Area) ALL R.M.R.A. machines use PL 114.8
** This machine has a fulltime 6 mtr 52.525 gateway on it, up for Sporadic 'E'
fming - dxing??

447.900 SALT LAKE and Wide Area and SKI Resort Coverage

448.350 UHF to complete HF gateway, DTMF controlled, wanna CALL home???

and the Utah VHF Society has the 147.120 + no tone covers both areas

and the 147.180 + no tone is actually up at the 10,000 foot SNOWBIRD TRAM
room!!

Give me a holler when you get into town..mostly on 448.700 or 447.900...

2323. I need some HF antenna help.....

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-13 00:00:00 UTC
From: Jim Markle <jim_markle@corp.disney.com>
Message-ID: <4fr47h$og5@louie.disney.com>
Source record: 230640

Briefly (cw version): Can I add coils of wire to a tuner/ladderline fed dipole to increase wire lenght and thus performance on 75M without hurting 10M-40M?

Not so briefly (ssb version):
I have a ladder line fed flattop dipole (approx 33'/side) I'm tuning it for pretty acceptable outputs (except on 75m) with an MFJ tuner. On 75m it loads up but I know not much is actually being radiated. And I want better "real" performance on 75m. I can't add any more length to either side of the dipole without practically doubling back the wire on itself. Very small lot......

I have some open coils that are about 2" dia at 1/8" spacing. Can I add a piece of this coil to each side of the dipole and effectively increase my total wire length, even though a chunk of it is all coiled up?

Would it be better to insert the coil at the feedpoint? Midpoint? Endpoint of the dipole???

Using a good tuner, will I be able to still get a good amount of signal past the feedline and up into the air? Or will the coil's inductance somehow cancel any benefit I'm hoping for and leave me with a very short, high freq resonant dipole with the coils acting as traps?

Thanks very much in advance for any help, it's much appreciated.

Jim Markle

If your current address is good with the FCC, you will receive a form 610-R from the Commission for renewal. Just sign it and return it to FCC. You will see this 60-90 days prior to expiration. If you don't receive it, you can obtain a 610 form from ARRL Hq. within a few days. FCC no longer accepts renewals sent earlier than 60 (though I forget, it may be 90) days prior to expiration.

There was an article in one of the over the counter technical magazines within the last year describing this project. It talked about lenses in the sky caused by rf heating of the atmosphere. It talked about virtual antennas. It also addressed the need for the location due to energy requirements (tapped directly into a natural gas reserve).

Check your library in the magazine index.

2329. Update to Radio Propagation Forecasting Course

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-13 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <4fqp71$4s2@holly.cc.uleth.ca>
Source record: 230696
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

NOTICE: There are still plenty of seats available for the Internet Space Weather and Radio Propagation Forecasting Course, scheduled to begin on 18 March. An enrollment form is included at the end of this announcement for those who want to enroll. Enrollment forms must be postal mailed by interested participants no later than 04 March to be accepted.

CORRECTION TO PREVIOUS ANNOUNCEMENT:

We would like to correct a mistake in our previous posted announcement that stated that no more than 60 people will be accepted for this course. We WILL accept more than 60 people for the course. If more than 60 enrollment forms are received, everyone who enrolls will be accepted. But we will stop actively advertising the course and will discourage investigators from enrolling to take this course after 60 people have enrolled.

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE ANNOUNCEMENT

The response to our questionaire has been sufficient to justify going ahead with the Internet Space Weather and Radio Propagation Forecasting Course. People with almost any type of computer system will be able to take this course (see below).

Course Start-Date

The course is scheduled to begin on 18 March 1996. Persons interested in enrolling in this course MUST SEND US THE APPROPRIATE ENROLLMENT FORM AND PAYMENT FOR THE COURSE NO LATER THAN 04 MARCH 1996 TO BE ACCEPTED. That is, the enrollment forms must be postmarked no later than 04 March. This is required so that we have time to receive the enrollments and to distribute all required computer software and make certain everyone is ready to receive the course material before the course start-date. A printable enrollment form with mailing instructions has been appended below.

Course Prerequisites

There are no prerequisites to take this course. If you are interested, sign and send the enrollment form. This course will not be a difficult one for most people to handle. It will be visually-oriented with minimal math involved and will gradually increase in detail and complexity, building on the framework previously taught and established.

By the time the course is completed, everyone who takes the course should be able to forecast space environment and radio propagation conditions with accuracies comparable to professional forecasters.

One-Time Course

There are currently no scheduled plans to offer this course again in the future, UNLESS there is sufficient interest in the Internet community to justify offerring it again.

So, if you are interested in taking this course, this is the time to sign up. Don't wait for the next opportunity, because there might not be one.

Course Curriculum Reading Software

The following FREE software will be required to take this course. This software is available for most computer platforms, including:

* DOS
* Windows (3.x / NT / 95)
* Macintosh
* SDK
* UNIX systems (HP, SGI, and Sun supported)

The software is the ADOBE ACROBAT READER. This software is free of charge and can be downloaded at your convenience via FTP or WWW from Adobe (ftp.adobe.com/pub/adobe/Acrobat or http://www.adobe.com) or via our FTP system at: solar.uleth.ca in the subdirectories of "pub/solar/Software/Acrobat". Our FTP system is now connected to the Internet using a high-speed T1 line, so those who may have had slow downloads previously should notice a significant improvement in transfer speeds.

The use of the Adobe Acrobat Reader software has several significant advantages over other delivery methods. These include:

* Ability to incorporate complete graphical figures and high-resolution images into the lesson material for high-quality visually-oriented lessons.
* WWW-style links to other sections of the lesson material, allowing cross-references or bookmarks to be included.
* Support for imbedded digital video movies (AVI, MOV, MPEG, etc) if we should choose to insert movies of solar flares, etc.
* Wide compatability amongst most available computer platforms.
* Lessons can include links to WWW sites if you have Internet WWW access (not a requirement for the course).
* Lessons can be printed out on paper for those who would rather take the course on paper.
* There are security features available that are attractive.
* Compression features to reduce the disk-space requirements and download times.

Available Optional Course Material

This course will make use of a number of different IBM or compatible software products (designed for MSDOS 3.3 or higher systems or Windows systems running in DOS mode). The available software which can be used as part of the course curriculum includes the following, which can be ordered as part of the course when filling out the Course Enrollment Form appended to this announcement. This software is optional and will not be required to successfully complete the course. But it will certainly provide greater hands-on experience:

1. SKYCOM PRO Version 2.0 Ionospheric Signal Analyst Software (normally sold for $110.00 to $135.00 USD).
2. Professional Dynamic Auroral Oval Simulator (normally sold for $100.00 USD).
3. BCAST Solar and Geophysical Database Manager (normally sold for $50.00 USD).
4. Extended Database containing sunpot numbers from the year 1818, solar flux values from the year 1947, and geomagnetic data from the year 1932 (normally sold for $50.00 USD).
5. IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Software (valued at $50.00 USD).

Also available as part of the course curriculum, intended to be indirectly used as tools for the course, are our subscribable E-Mail Internet Services FOR ONE YEAR that include:

1. Daily Summaries of Solar and Geophysical Data (including all of the critical solar indices, geomagnetic indices, and statistics on solar flares, sunspot numbers, solar flux values, proton and electron fluences, neutron monitor and PCA statistics, etc).
2. Daily Summaries of Ionospheric Data (including ionospheric data from observatories around the world).
3. Daily Summaries of Auroral Activity (summarizing auroral activity for the last 24 hours and giving forecasts for the next 3 days).
4. Weekly Solar Terrestrial Forecasts and Reviews (which include complete summaries of activity in graphical formats as well as 10-day forecasts of geomagnetic activity, HF propagation conditions, auroral activity and potential satellite anomalies.
5. All Alerts and Warnings (warnings and alerts for major solar flares, geomagnetic storms, proton and PCA events, satellite anomalies and auroral activity).

These additional optional materials are not required to take the course, but will help you in developing your forecasting skills during and after you have completed the course.

Number of "Seats" Available

(Notice that this couse will be conducted entirely through the Internet via FTP or WWW in the convenience of your home or office. It does not require that you fly out and physically attend a class. Those who are interested in the course but do not have Internet access may also

arrange to purchase the course on-disk. Contact us for pricing.)

Enrollment will be on a first-come first-served basis. Although 60 seats are officially available, we will accept anyone who enrolls even if the number of seats exceeds 60. We will, however, stop advertising this course after the 60th seat has been taken. If you are concerned about the speed of the postal system delivering your enrollment form, we can reserve a seat (or seats) for you if you send an e-mail message stating your intent to enroll in this course to: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu. Include an appropriate enrollment form in your message.

Method of Course Delivery

Lessons will be available for download via FTP or WWW on a weekly basis by all individuals taking the course. If you are away one week, the older material will remain on-line so you can catch up at your convenience. We now have a high-speed T1 line installed which has resulted in significantly faster FTP and WWW transfers. The transfer of course material using this method will therefore be more than adequate.

Course Assignments

There will be course assignments that can be completed and returned to us if desired. However, we are not going to enforce this. If you are too busy to complete course assignments, we certainly won't hold that against you. Whether you decide to work on the assignments or "hand them in" will be entirely up to you. The assignments are only intended to help hone your skills and test your knowledge.

We Will Help

If parts of the course are particularly difficult to grasp, send us e-mail and we will try to clarify and explain the concepts using e-mail correspondence.

Revised Course Outline

The current course outline follows below. The order of the material listed below may not necessarily be the order in which they appear in the course curriculum.

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio propagation conditions using information available on the Internet, through radio observations, and through studies using supplied computer software.

Upon completion of this course, each student should be able to formulate space-weather and radio propagation forecasts with accuracies comparable to professional forecasters.

Supplied: o SKYCOM PRO Version 2.0 HF Ionospheric Signal Analyst
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Program
o Extended Database of sunspot numbers, solar flux and geomagnetic data.
o Subscription to All STD Solar and Geophysical E-Mail Products (including alerts and warnings) for one year.

Total Value of the Supplied Material: over $540.00USD

The following topics and subtopics are currently scheduled to be included as part of the course curriculum. There will probably be many other subtopics included that are not listed here.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding and Deriving Magnetic Indices
K-Indices
A-Indices
Auroral Electrojet (AE) Index
DST Index
- Magnetic Storms
Sudden Storm Commencements (SSCs)
Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere

- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data
- Coronal Mass Ejection Detection Methods
- Using IMPACT (software) to Aid in CME Disturbance Predictions
- Solar Cycle Dependencies
* Solar Flares
- Basic Nature of Flares
- Types of Flares
- Flare Rating Systems
- Significance of Proton Flares
- Ground Level Events (GLEs)
- Fast Transit Events
- Interpreting Magnetograms
- Determining Magnetic Shear and Flare Susceptability
- Solar Flare (and Proton Flare) Prediction Techniques
- Solar Flare Related Coronal Mass Ejection Prediction Techniques
- Sources of Solar Flare Information
* Solar Coronal Holes
- Coronal Hole Basics
- Recurrence
- Solar Cycle Correlations
- Associations with Near-Relativistic Electrons
- Coronal Hole Related Disturbance Prediction Techniques
* Filament Eruptions
- Filaments and Prominences
- Eruptive and Non-Eruptive Activity
- Filament-Associated Coronal Mass Ejections
- Filament-Related Disturbance Prediction Techniques
* Possible Lunar Influences
- Interaction with the Geotail

o Auroral Activity
* Basic Theory of the Northern/Southern Lights
* Behavioral Characteristics of the Auroral Ovals
* Sensitivity to Solar Disturbances
* Affects on Satellite Health and Radio Communications
* Mathematical Models of the Auroral Zones
* Auroral Activity Prediction Techniques
* Information Sources

o Conditions Affecting Satellite Health
* Satellite Orbits
- Geosynchronous
- Sun synchronous
- Polar

- Properties of Lagrangian Orbital Points
* Atmospheric Drag
* Surface Charging Anomalies
* Deep Dialectric Charging Anomalies
* Interplanetary Shocks
* Magnetopause Crossings

o Postulated Sun/Earth Climate Connections
* Possible Long-Term Climatic Trends
- Rainfall
- Temperatures
- Atmospheric Pressure
- Storm Tracks
- Ozone Correlations
* Possible Short-Term Meteorological Trends
- Pressure and Winds
- Lightning
- Storm Systems
- Ozone Responses

o Radio Propagation
* Basic Theory (Non-Technical)
- Characteristics and Components of Radio Signals
- Understanding Plasmas
- Importance of Electron Collisions
- Appleton/Hartree Contributions
- Signal Polarization and Coupling
- Ionospheric Absorption
Deviative Absorption
Non-Deviative Absorption
- Fading
- Multipathing
- Travelling Ionospheric Disturbances
- Solar Related Disturbances
- Structure of the Ionosphere
Ionospheric Layers
Importance of Sporadic-E
Effects of Spread-F
Solar-Cycle Dependencies
Models of the Ionosphere
x Simple Mathematical Models
x Numerical Maps
x CCIR
x URSI
x The International Reference Ionosphere (IRI)
x Others
* Probing the Ionosphere
- Probing Techniques
- Probing Instruments
- Sources of Ionosonde Information
* Basic Ray-Tracing Concepts

- Ordinary vs Extraordinary Signals
- Becoming Familiar with Ray-Tracing Software
* Ray-Tracing in Three-Dimensions
- Ray-Tracing Software Considerations
- Preparing for 3D Ray-Tracings
- Performing 3D Ray-Tracings
- Studying 3D Ray-Tracing Results
* Vertical Radio Signal Propagation
- Signal Reflection Behavior
- Critical Frequencies
- Ray-Tracing Vertically-Incident Signals
* Oblique Radio Signal Propagation
- Signal Refraction/Reflection Characteristics
- Effects of Geomagnetic Activity
- Effects of Solar Activity
- Ray-Tracing Obliquely Incident Radio Signals
- Determination of Maximum Usable Frequencies
Simple Empirical Methods
Ray-Tracing Techniques
- Effects of Sporadic-E
- Non-Great-Circle (NGC) Propagation
Responsible Conditions
Compensation Methods
Ray-Tracing Techniques to Analyze NGC Propagation
- Chordal-Hop and Inter-Layer Ducting Propagation
Advantages and Disadvantages
Analysis using Ray-Tracing Techniques
Detailed Ducting Analyses
- Searching for and Exploiting Exotic Propagation Paths
Properties of Exotic Paths
x Auroral-Related Non-Great-Circle Propagation
Searching for Exotic Paths using 3D Ray-Tracing Techniques
Determining the Most Reliable Exotic Radio Paths
* Ionospheric Disturbances
- Solar Related Disturbances
Solar Flares and Related Coronal Mass Ejections
Coronal Holes and High Speed Solar Wind Streams
Filament Related Coronal Mass Ejections
Impact of Flare Related Radio Noise Bursts
- Short Wave Fadeouts
- Sudden Phase Anomalies
- Sudden Frequency Deviations
- Devastating Effects of Polar Cap Absorption
- Disturbances and their Effects on Satellite Communications
* Radio Propagation Prediction Methods
- Short-Term Forecasting Techniques
- Medium-Term Forecasting Techniques
- Long-Term Forecasting Techniques
- Sources of Forecasting Information

o Applied Forecasting Techniques
* Climatology
* Pattern Recognition
* Compiling Necessary Information
* Exploiting Databases
* Computer Related Aids
* Studying Real-Life Examples
* Developing Experience and "Intuition"

o Field Experience
* We present you with some specific historic real-life scenarios. Using the information and techniques studied in this course, you are asked to develop your own space-weather and radio-propagation predictions. The actual real-life impacts are then studied and compared with your forecasts.
* We present you with several hypothetical (possible future) examples and ask you to develop your own forecasts.

o Course Completed

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE
ENROLLMENT FORM

I am interested in taking the Internet Space Weather and Radio Propagation Forecasting Course, currently scheduled to begin March 18, 1996. I have filled out the necessary information below.

I AM INTERESTED IN TAKING THE FOLLOWING COURSE VARIANT:

[ ] - The Full Course without the accompanying computer software or subscribable e-mail services for $150.00USD.

[ ] - The Full Course WITH all accompanying computer software, but WITHOUT the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $200.00 USD.

[ ] - The Full Course WITHOUT the accompanying computer software, but WITH all STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $200.00 USD.

[ ] - The Full Course WITH all accompanying computer software AND WITH the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $250.00 USD.

CHOOSE ONE OF THE FOLLOWING:

[ ] - I need the computer software postal mailed to me on 3.5" high-density disks to the address written on the *REVERSE* side of this order form for an additional $40.00USD which includes shipping and handling.

[ ] - I expect the Solar Terrestrial Dispatch to notify me via e-mail of the Internet FTP and WWW procedures to obtain the computer software.

CHOOSE ONE OF THE FOLLOWING:

[ ] - Please inform me of the FTP/WWW procedures to obtain the FREE ADOBE ACROBAT READER software over the Internet, required to read the course material.

[ ] - Please ship me the ADOBE ACROBAT READER software on 3.5" HD disks (for IBM or compatible systems only) for an additional $10.00 USD.

TYPE OF COMPUTER AND OPERATING SYSTEM THAT WILL BE USED TO TAKE THIS COURSE:

_____

MY E-MAIL ADDRESS IS:_____

MY BACKUP E-MAIL ADDRESS IS: _____
(if available)

MY VOICE TELEPHONE NUMBER IS: _____

MY FAX TELEPHONE NUMBER IS: _____

TOTAL AMOUNT INCLUDED FOR ENROLLMENT, INCLUDING ANY ADDITIONAL AMOUNTS REQUESTED FOR SHIPPING SOFTWARE, ETC, IN UNITED STATES CURRENCY ONLY:

$_____._____ U.S. DOLLARS

I have remitted a check or money order (IN U.S. FUNDS) for the above amount to the "Solar Terrestrial Dispatch" at the following address:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

FAX: 403-756-3008

I understand that course material (lessons) will be made available on a weekly basis for anonymous FTP and WWW from the Solar Terrestrial Dispatch and that I will be notified via e-mail of the FTP/WWW and other procedures required to obtain the lesson material and read it on my computer. I also understand that there will be no refunds for the course should I be dissatisfied with the course or the included software or services.

By signing below, I agree that I will not share copies of this course with any other individual(s) through any means without the expressed permission of the Solar Terrestrial Dispatch. FAILURE TO SIGN AND DATE THIS FORM WILL VOID YOUR ENROLLMENT APPLICATION.

Date: _____, Signed: _____

Please Print Your Signed Name Here: _____

+-+-+-+-+-+-+-+-+-+-+-+-> End of Enrollment Application <-+-+-+-+-+-+-+-+-+-+-+-+

>occur. A simple aural check of the frequency would be far more
>effective.

Come on now, calling a DCD indicator a tuning indicator is
stretching the definition of tuning indicator a bit far.
Let's take a look at the worst tuning indicator out there,
the MFJ1274's bargraph. It covers a span over twice the
occupied bandwidth of the transmitted signal. Surely a
50% guard band is sufficient. Anyone who expects more
clearance than that is being unrealistic on today's
crowded bands.

Now unfortunately the MFJ's tuning indicator isn't
incredibly sensitive, and might miss a weak signal
down at the noise floor. But consider my P-38 card's
tuning indicator. It also covers a span twice that
of the occupied transmission bandwidth, and it *is*
sensitive enough to detect signals buried so deeply in
the noise that I can't hear them by aurally monitoring.
And the XY display on my homebrew TU is also good enough
to detect signals I can't reliably hear. I'd say either
one is a better monitor than just listening.

I can say that with confidence because I do leave the
speaker on when I'm hunting contacts, and I've spotted
signals on the tuning indicators that I completely
missed by ear (and have had QSOs with stations I couldn't
hear on the speaker). I may not be able to *copy* Morse

using those tuning indicators, but I can certainly tell
if it is present. And that's all I really need to know
to avoid interfering.

Now I'll grant that if you demand a 1 kHz guardband I
won't be able to tell you're there, but I consider that
an unreasonable demand on today's bands, for any mode,
data, voice, or OOK Morse. If you need that much guardband,
you need to fix your receiver, or sharpen your technique.

Gary

2331. Ghost Town Operation/ April 27, 1996/Riley, NM

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-13 00:00:00 UTC
From: wa5whn@ix.netcom.com
Message-ID: <4fr007$7mv@cloner3.netcom.com>
Source record: 230698

For the Northern California QRP Club, "QRP To The Field", April 27, 1996 (aka "QRP Field Day") a number of us (> 13) will be operating from a Historical Old Ghost Town in New Mexico, by the name of Riley. This town was famous for the bandits that hid out in the nearby Ladrones Mountains. Legend has it that over $50,000.00 in loot is still buried in the nearby mountains. Guess where we will be @ night ?

****
Riley, New Mexico (Ghost Town)

Lat: 34 deg. 22' 50.35" N
Long: 107 deg. 13' 47.55" W
****

Paul Harden, NA5N (pharden@aoc.nrao.edu) had suggested, for this event (NorCal "QRP To The Field"), that a multitude of stations (QRP & QRPp) operate from historical sites. There will be several in Colorado & Arizona too. Those stations will probably post where they will be in this newsgroup & the QRP-L reflector.

With the multitude of QRP stations, that will be in Riley, NM, we will offer a special QSL Card (Photo), if You work any of the stations there. If You are interested in the NorCal "QRP To The Field" details, send a SASE to WU7F (callbook address). It is a 1 page flyer. If You are interested in QSL information for the Riley, NM event, stay tuned for details & check into the QRP-L reflector (The URL is in Webcrawler & the other search engines.)

This event in Riley will start off on April 26th with the viewing of 2 comets (dark skies), at night. One of the comets maybe visible to the naked eye. Then on the 27th of April, You will hear quite a bit of activity from this Ghost Town, and hopefully others.

Listen for us, we will be near the QRP calling frequencies; 21.060 MHz (If it is open), 14.060 MHz, 10.106 MHz, 7.040 Mhz, 3.710 MHz & we will be on 6 meters & 2 meters SSB too. We will indicate that we are in Riley, NM. Try to work all of the stations in Riley. With QRP, and the size of the Ghost Town, we will be spread out across several canyons & one River (Rio Salado). Yes, there is an old Church, grave yard & Rock School House still standing. As for the Ghosts, well, maybe we will have a few more stations than we had anticipated, or less ;-)

Again, mark Your' Calendars, April 27, 1996, send a SASE To WU7F for the 1 page flyer & listen for all of us. We had heard a rumor that the Arizona QRP Crowd will not only be in a Ghost Town, but they will finance their operation by panning for gold too 8-)

72 (QRP 73)...Jay, WA5WHN, Albuquerque, NM

(Too bad that we are not doing this on
Halloween)

GH0ST de WA5WHN K

PS For those of You in California, no extra points for Metaphysical
contacts :-) (snicker-snicker).

Are you sure you've got your acronym correct? HARP was Gerald Bull's project to fire a projectile into space using his advanced gun design, which was later the basis for the Iraqi supergun. It was funded by the US Air Force, but the tests were fired in the Caribbean. I believe the highest altitude reached in those tests was 78 miles. When Air Force funding dried up, Bull went to the Iraqis for funding to make his orbital cannon. Bull claimed the Iraqi supergun would have been able to achieve orbit with its projectiles. (He was assassinated by Israeli agents before he could complete the project.)

Presumably you will have a control operator on board, GRIN!
You could have it send a description of the radio xmtr etc.
What about putting it on lower HF band like 40m so we can all listen
in? I think that would be fun!

HJB>Hi:
HJB> I've been planning to launch a double stage rocket with a Morse Code
HJB>Transmitter on it. I'll be using a Z8 micro to shift a code string to a
HJB>xmitter. The hard part, I don't know what to have it send. I figure my cal
HJB>and grid square would be good, but I have room for so much more. I suppose
HJB>can have it count time from an event, like the launch, but putting in an
HJB>altimeter would add too much weight. Any suggestions?

HJB>Thanks!

Yes I had this problem also with my DX-70. It turned out to be the pl is
adjusted to high at the factory. Alinco took it back and properly
adjusted the pl under the warranty.

Briefly (cw version): Can I add coils of wire to a tuner/ladderline fed dipole to increase wire lenght and thus performance on 75M without hurting 10M-40M?

Not so briefly (ssb version):
I have a ladder line fed flattop dipole (approx 33'/side) I'm tuning it for pretty acceptable outputs (except on 75m) with an MFJ tuner. On 75m it loads up but I know not much is actually being radiated. And I want better "real" performance on 75m. I can't add any more length to either side of the dipole without practically doubling back the wire on itself. Very small lot......

I have some open coils that are about 2" dia at 1/8" spacing. Can I add a piece of this coil to each side of the dipole and effectively increase my total wire length, even though a chunk of it is all coiled up?

Would it be better to insert the coil at the feedpoint? Midpoint? Endpoint of the dipole???

Using a good tuner, will I be able to still get a good amount of signal past the feedline and up into the air? Or will the coil's inductance somehow cancel any benefit I'm hoping for and leave me with a very short, high freq resonant dipole with the coils acting as traps?

Thanks very much in advance for any help, it's much appreciated.

>Briefly (cw version): Can I add coils of wire to a tuner/ladderline fed
>dipole to increase wire lenght and thus performance on 75M without hurting
>10M-40M?

Yes. They would act as loading coils on 80 to increase the
current in the center of the dipole. A short length (6 feet
or so) of wire on the outboard side of the coils would be
adjusted to fine tune the resonant frequency on 80/75. Make
sure the short wire and coil are well insulated as high
voltages will be present on the outboard side of the coils.

On the higher bands the coils would tend to act as chokes
making the antenna look like a half wave dipole on 40, a
full wave on 20, etc.

I have found that a 67 foot dipole fed in the center with 50
feet of 300 ohm transmitting style twinlead allows a good
match using my Johnson Matchbox from 2.9MHz up to 30MHz. I
operate MARS frequencies which are often far removed from
the standard ham bands. The efficiency could be improved on
80/75 by using the loading coils you suggest. I haven't
found the need to do so because it works well enough for my
purposes without loading coils.

VK2 election notice

Divisional elections

The Elections for the 1996-1997 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 20th April 1996.

Nominations for the council are now open and they will close at 12 noon on Saturday 9th March 1996. The Divisional Office will be open that day as well as its normal opening hours, which will be given elsewhere in the broadcast.

Nomination forms are NOW available from the Divisional Office.

A special note for members

Only ordinary members and honorary life members are eligible to vote in the forthcoming ballot. Associate members are not eligible to vote in the ballot. An ordinary member is one who holds a "Certificate of Proficiency" of any level. An associate member, is one who does not hold such a "Certificate of Proficiency" - commonly called a shortwave listener.

So any member who has doubt about their membership status are invited to contact the Divisional Office to confirm their membership status.

The Office's telephone number is (02) 689-2417
The Office's fax number is (02) 633-1525
The Office's free call number is 1800 817-644

The Divisional Office's address is
109 Wigram Street Parramatta
P.O. Box 1066 Parramatta N.S.W. 2124

Peter O'Connell VK2EMU
Divisional Returning Officer
(02) 584-3236 (H)

Examination dates

Examination dates for 1996

****

Wireless Institute of Australia NSW Division

18th February 1996

Cable & Pay TV standards

Cable and Pay TV standards to be investigated

Standards Australia is in the process of establishing a project to develop standards for cable television distribution systems, to provode cable TV network design and installation engineers with limits for unwanted radio frequency (RF) emissions (and methods of measurement), to afford protection to other RF equipment in the local environment.

One of Standards Australia's committees is to undertake the project. Committee TE/3, which covers Electromagnetic interference matters. TE/3's project manager, Terry Ehret, expects the project to get under way this year, folowwing completion of the formal approval process and clearance from the Board of Standards Australia. Mr. Ehret could not advise a target date for the adoption of a standard. The project will principally be concerned

with emissions from cable distribution systems.

Cables for distribution of pay TV and other services are currently being laid around Australia by Telstra and Optus. Telstra's network was on-target to pass more than one million homes by the end of 1995. Telstra's cables are largely laid underground, but Optus has gone for above-ground cabling, using curbside electricity poles. Both networks are designed to reach four million homes when completed, scheduled for late 1999.Foxtel began supplying cable pay TV services last October.

The Australian Broadcasting Authority is concerned that cable TV services using channels in the broadcasting service bands have the potential to interfere with free-to-air TV, and cable services using channels between 230 MHz and 520 MHz may potentially interfere with mobile or fixed radiocommunications services and navigation equipment which operate in that frequency range. They also expressed concern with the possibility of re-radiation of cable transmissions via indirect connections to external TV reception antennas connected to a customer's TV system.

Standards Australia's Committe RC/5 is considering standards for connection between pay TV services providers' "in-premises delivery systems" and their set-top units (STU's - pay TV receiver and decoder) and their connection to customers' TV receivers. Committee RC/5 is also considering channel plan standards fdor cable systems and output channels for pay TV STUs and VCRs.

The cable system sends signals to customers in the 85-550 MHz band. Analogue PAL TV signals require a 7 MHz bandwidth, as for boradcast TV, so a large number of channels can be accommodated. It is planned to replace analogue TV delivery with a digital system within a few years. The cable equipment being installed will handle both systems as the digital system will employ FM mode RF signals.

Microwave distribution pay TV has been operating for just over 12 months, with Galaxy being the principal operator. The RC/5 committee is understood to be looking into standards here, too, covering the STUs, channel plans and installations. Telecommunications regulator, AUSTEL, is also considering standards for cable STUs and their installation.

The accompanying table (not shown here - ed.) shows the output channel plan of an actual Galaxy customer installation, with a Jerrold STU (by General Instruments). A single channel output, using TV Ch. 1, can be taken to the TV set, and the STU operated using its remote control. Alternatively, another RF output sends each pay TV channel to an Individual output channel, which can be selected using the TV or a VCR's channel selector. The STU to TV/VCR link is via coax from a screw-type F-connector.

Note that the two lowest frequency channels span the 2m band, and the four higher frequency channels cover the bottom of the 70cm band.

For amateurs, there may be potential for electromagnetic interference (EMI) from, and RF interference (RFI) to, cable and microwave pay TV STUs. This will be dependent on standards of STU manufacture and installation. While concerns have been aired over cable EMI and RFI, the equipment and installation has to be watertight as well as "RF tight", as the carriers (Telstra and Optus) have to meet regulations with regard to reliability and delivery of services, or face government sanctions.

There is more potential for EMI and RFI problems from the street-to-premises link, and the STU installations. However, suppliers are providing equipment (cable transmission equipment as well as customer equipment) designed and manufactured to meet European and North American market requirements, where fairly stringent electromagnetic compatibility standards have been mandatory for some time, and have in recent years have been strengthened.

It is anticipated that Australian standards will likely be modelled after recent European standards.

The WIA is represented on Standards Australia's electromagnetic interference Committee, TE/3, by David Wardlaw VK3ADW.

UK low frequency band

Low frequency band nearer for UK amateurs

Amateurs in Britain will likely be able to use an allocation in the low frequency part of the spectrum in the near future, according to a release from the Radio Society of Great Britain (RSGB).

The RSGB said the British Radiocommunications Agency (RS) has agreed on a frequency around 73 kHz.

The move is a result of negotiations between the RSGB and the Radiocommunications Agency (Which has a similar role to our Spectrum Management Agency). The RSGB's Licensing Advisory Committee reported in December that the release of the LF allocation was getting nearer, and now depended on discussions on the actual terms of licensing, which were continuing.

The RSGB originally explored the possibility of an allocation around 87 kHz.

VK2 WICEN news

WICEN News

The Central Coast Amateur Radio Club Field Day, an event not to be missed for publicity purposes, is just two weeks away, on the 25th

February. Your ideas are requested, so please let the publicity Officer, Dave VK2KFU, or the State Co-ordinator, John VK2AMH, know whether you can assist. We are particularly interested in action photographs of WICEN, which can also be scanned in for the Web page. Of interest to all listeners, not just WICEN members, is the fact that the NRMA has donated a "Green Slip" to be raffled off at the Field Day, so, if you are wondering how you are going to pay for your Green Slip this year, just drop in to the WICEN display and join the raffle -- all are invited.

The annual Bungonia Cave Rescue event is on the weekend of 16-17th March, and Mark VK2XGK would like to hear from those wishing to demonstrate their communications skills, under somewhat difficult circumstances; don't worry -- you will not be required to go underground. The potential for publicity here, before various emergency services and the public, should not be overlooked. On the same weekend, on 17th March, is the Red Cross Calling Doorknock Appeal, with David VK2UDT taking enquiries.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://sydney.dialix.oz.au/~wiansw/wicen/".

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Sydney DX Packet cluster

A packet radio DX cluster is now operating in Sydney on 144.825 MHz. Its callsign is VK2AAB-3 and it can be reached through the Rose network at address 247700.

This system is similar to the DX Cluster spotting services in use overseas. DX operators are invited to use the system and enter DX stations heard. These facilities are of great value to six metre operators.

Barry VK2AAB at VK2WI

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(02 FEBRUARY - 08 FEBRUARY)

ISSUED 09 FEBRUARY

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 895 11TH JANUARY (sic) 1996

Launch contract for Phase 3-D finalised

The Amateur Radio Satllite Corporation (AMSAT) has announced plans to launch the Phase 3-D satellite aboard the second flight of ESA's new Ariane 5 for approximately $1m US. The launch is currently slated for September, 1996, but if not possible could be shifted to an older Ariane 4 booster for launch by mid-1997.

From Amateur Radio Today December 1995

In the same magazine ...

The ARRL may be headed to Congress to try and force the FCC to enforce the Amateur Service rules. At least the rules that govern willful and malicious interference. It was reported that progress on two egregious cases of repeater jamming have proceeded far slower than had been promised by the FCC Staff. It was noted that announced closings of FCC field offices along with staff cuts appear to have contributed to a deterioration in morale.

It appears that the ARRL has reached the conclusion that legislative action may have to be taken to make the FCC enforce the rules.

DIGITAL JOURNAL WW DIGITAL WPX CONTEST PART 4
10-11 FEBRUARY, 1996

SCORING : TOTAL QSO POINTS FROM ALL BANDS MULTIPLIED BY THE NUMBER OF DIFFERENT PREFIXES WORKED. A STATION MAY BE WORKED ONCE ON EACH BAND FOR QSO POINT CREDIT. PREFIXES COUNT JUST ONCE IN THE CONTEST.

AWARDS : CERTIFICATES WILL BE AWARDED TO THE HIGHEST SCORING STATIOM IN EACH CATEGORY LISTED IN THE RULES.

1. IN EVERY PARTICIPATING COUNTRY

2. IN EACH CALL AREA OF THE U.S., CANADA, AUSTRALIA, AND JAPAN.

3. ALL SCORES WILL BE PUBLISHED. HOWEVER TO BE ELIGIBLE FOR AN AWARD, A SINGLE OPERATOR MUST SHOW A MINIMUM OF 12 HOURS OF OPERATION. MULTI-OPERATOR STATIONS MUST SHOW A MINIMUM OF 18 HOURS.

LOG INSTRUCTIONS: ALL TIMES IN UTC, RESTS MUST BE MARKED. SINGLE OPERATOR IN CHRONOLOGICAL ORDER, MULTI-MULTI MUST BE CHRONOLOGICAL BY BAND. PREFIX MULTIPLIERS MUST BE ENTERED ONLY THE FIRST TIME CONTACTED. AN ALPHA-NUMERIC LIST OF PREFIXES MUST BE SUBMITTED WITH LOG, UNLESS DISK OR ELECTRONIC ENTRY.

EACH ENTRY MUST HAVE SUMMARY SHEET LISTING ALL SCORING INFORMATION, CATEGORY OF COMPETITION AND CONTESTANT'S NAME AND MAILING ADDRESS.

CONTEST LOGS MAY BE SUBMITTED ON DISK, E-MAIL, OR INTERNET. FILES MUST BE IN ASCII FORMAT, AND BY THE RULES IN PREVIOUS PARAGRAPH. ONLY MS-DOS COMPATIBLE DISKS.

THE USUAL DISQUALIFICATIONS APPLY.

DEADLINE: POSTMARKED 30 DAYS AFTER CONTEST, TO:

JAY TOWNSEND, WS7I
P.O. BOX 644,
SPOKANE WA 99210-0644 U.S.A.
OR
VIA INTERNET JAYT AT COMTCH.IEA.COM

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(02 FEBRUARY - 08 FEBRUARY)

ISSUED 09 FEBRUARY

SUMMARY

Date 02 03 04 05 06 07 08
10cm 76 74 74 71 71 70 68
A 8 4 7 5 3 9 (7 APPROXIMATE)
T 14 7 0 8 3 14 13

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 3RD TO 5TH FEBRUARY, MOSTLY QUIET WITH A BRIEF UNSETTLED PERIOD ON 6TH, AND QUIET TO UNSETTLED ON 2ND, 7TH TO 8TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES. BLANKETIN SPORADIC E WAS BOSERVED EARLY ON 2ND, ABD SPREAD F OCCURRED DURING LOCAL NIGHT ON 4TH, 6TH AND 8TH FEBRUARY.
FORECAST (09 FEBRUARY - 15 FEBRUARY)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE

REQUENCIES: NEAR PREDICTED MONTHLY VALUES. SLIGHTLY DEGRADED
HF CONDITIONS ARE EXPECTED FOR THE SOUTHERN REGION
DURING 10-11 FEB

If I can put my 2 cents worth in (and I am Canadian so 2 cents is not worth that much ;-) I agree with the sentiments expressed here by all the hams responding in this thread.

When I first got into ham radio I thought it was supposed to be fun. Then I see all the people complaining about CW. And people getting ignored because they are not "DX" enough, or they are running QRP. (BTW I have heard some Canadian hams complain that American ham radios tend to "work a little better" during contest times so that QRP stations receive responses from WAVE'ers.) The ARRL even has a section in its handbook advising foreign stations how to handle rude and selfish DX seekers. Where has the fun gone?

I got into ham radio because I was interested in communicating. I don't care with who, or where. My dream is to build radios from scratch and have them work (which means I will be doing a lot of QRP and Morse code). Isn't that what the original dream of ham radio was all about?

Unfortunately it seems like some people get in to amateur radio just so they can hang an expensive HT on their hip. They seem only interested in the loudest; the farthest; the most fancy etc. and I certainly doubt that they would be interested in talking to me... even if it is contest time and they need a VE5 to complete their list. This is probably just as well because I think we would have very little to talk about.

2343. DX IS! (CW IS!)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-14 00:00:00 UTC
From: Rod Dinkins <ac6v@ix.netcom.com>
Message-ID: <4fssd3$ahq@reader2.ix.netcom.com>
Source record: 230710

I am not certain that WA6AUD, Hugh Cassidy, originated the immortal phrase DX IS! but he certainly used and popularized the phrase in his West Coast DX Bulletins published in the 1970's. Hugh's wonderful stories can be found in a book titled "DX IS!", edited and published in 1981 by Charles T. Allen W5DV and James M. Allen W6OGC.

Hugh published the West Coast DX Bulletin weekly for over 11 years in the 1970's. The book "DX IS" is a collection of the delightful stories by Cass about the trials and tribulations of the QRPer, Red-Eyed Louie, the Palos Verdes Sundancers (making sunspots), and the Old Timer who wisely counselled the new DXers of the mysteries of the ages.

Several of stories embody the phrase DX IS! as the only required explanation of the enigma of DXing.True Believers inherently know of this and True Blue Dxers ascribe to it, Cass claimed, and in Hugh's words "Son of a gun if that isn't true".

From DX IS! --

DX IS THE EMBODIMENT
OF EVERYTHING THAT'S EXCELLENT
IT HAS NO KIND OF FAULT OR FLAW
DXERS ALWAYS DRAW THE LOOKS OF AWE
DX IS!

Perhaps it is akin to Sir Edmond Hilliary's famous retort to "Why climb Mt everest?" he replied simply "Because its there".

Like many things in life -- DX is beyond description and needs none and if you believe that you are indeed "A True Blue DXer".

CW IS! also

Hi OM and YLï¿½s

I have been using Hyperlog software for years, and now have the version 2.25
(Payed for!).

Heard rumours, that Hypersoft released "Hyperlog Plus".

Anybody know this product, and can compare to 2.25? Any URL for demo-download?

Thanks for the bandwith

Sorry,I ment: 28.400 MHz is SSB international calling freq.

2348. DS-1A (DC-DC converter for Kenwood) question

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-14 00:00:00 UTC
From: cnc23a@b4pph13e.bnr.ca
Message-ID: <4ft09j$ias@crchh327.rich.bnr.ca>
Source record: 230715
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I have a Kenwood TS-820S that I would like to run off battery in
cases of emergency. And as a (good ?) homebrew project, I thought
I could emulate the offering from the manufacturer. Problem is,
the information in the back of the service manual is sufficently
ambigeous enough that I have a few questions.

Is the transformer shown part of the DC-DC converter kit, or is
it the one already in the radio, with the barrier strip that already
has the matching color coded wires ?

The drawing shows the same connector as used for AC input, but wired
for DC, then another "power connector" thet does not appear to match
the previous which interrconnects with the barrier strip. How exactly
is the power (DC) connected into the system ?

Any other hints/explainations on this 'project' would be welcomed.

Thanks..

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 FEBRUARY AND FORECAST FOR 15 FEBRUARY - 17 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 13 Feb
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.3E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Feb 16 Feb 17 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Feb: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled

Estimated Indices : A K Observed A Index 13 Feb
Learmonth 12 3233 3322
Fredericksburg 16 13
Planetary 7 13

Observed Kp for 13 Feb: 3252 3232

2B. MAGNETIC FORECAST
Date Ap Conditions
15 Feb 8 Quiet to unsettled
16 Feb 16 Unsettled
17 Feb 12 Unsettled
COMMENT: Slightly elevated geomagnetic activity expected until
17 Feb.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
14 Feb Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
15 Feb Normal Normal Fair
16 Feb Normal Normal-fair Fair-poor
17 Feb Normal Normal Fair
COMMENT: High latitudes may experience degradation in HF comms
quality until 17 Feb.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
14 Feb 3

Observed Australian Regional MUFs:
Darwin: depressed 15-20% until 05 UT, then near predicted
monthly values, spread F observed near local dawn.
Townsville: Near predicted monthly values, strong sporadic E
layer 14-17UT.
Sydney: Near predicted monthly values.
Hobart: 15% depressed to near predicted monthly values.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
15 Feb 5 near predicted monthly values
16 Feb 0 near predicted monthly values
17 Feb 0 near predicted monthly values
COMMENT: The quality of HF comms for southern region circuits
may be slightly degraded until 17 Feb.

Hyperlog "Pro" is not yet released (my guess is 3-4 more
months).

Meanwhile, the "regular" version is now up to version 3.05.
You can download it from the HyperSoft BBS (the number is
in the documentation).

There's all sorts of nasty answers to nasty comments to nasty questions
but
a: next time you want to have a Viet Nam don't ask us.
b. The Kokoda Track battle over the Owen Stanleys was a hard slog for
the Aussies, mainly. The US was conspicuously small there.
c. MacArthur was reticent to let the guns in Port Moresby be shifted
to the eastern side of the range for the final showdown and prolonged
that stage of the war.
d. The battle of Darwin was indeed helped by the US Army and Navy
Air Forces (as they were then) much to the same effect as at Pearl Harbour.

Don't get off your bike. One man's opinion isn't the whole nation's.
We still have a very great resect for the US despite whatever it is
that may have upset you.

The transformer is the primary TX in the TS820S.

The power is supplied through the existing connector, which is
re-configured for DC operation. Use a CINCH S-312-CCT connector.

>
>
> Any other hints/explainations on this 'project' would be welcomed.

I called Kenwood and they were very helpful with a FAX of the DC-DC
adaptor. The kit is, however, no longer available, according to Kenwood.

I thought my FT40 stoped doing this when I exit the squelch setting. I
thought it was just for my convience in setting the squelch that is
was giving me some static. Now I played with it and noticed that mine
does this no matter what, even without the hash, if I turn the
squelch down I get the noise in bursts as you describe.

Any word on fixes?

I have a mint PTS160 frequency Synthesizer by Programmed Test Sources.
It generates carriers from 100 KHz to 160 MHz in 1 Hz steps. The unit uses
Direct Analog Synthesis and can switch frequencies in extremely short times.
Power is adjustable from the front panel up to around 15dBm. Unit is calibrated
and within 1Hz of WWV. This unit sells new from PTS for over $7000. Asking
$1200. OBO. Unit has TCXO, GPIB, Rack mount and other options.

>resolution when lock is finally achieved. So higher pitch tones allow
>faster recognition of pitch information than low pitch tones. (I don't
>think I'm explaining this well, perhaps someone else can offer a more
>intuitive explanation.) In any event, the ear needs several cycles of
>tone to come to a good pitch lock, and for short duration tones, that
>requires a higher pitch. Morse elements at a reasonable speed have a
>shorter duration than a musical note, so experience with the musical
>scale may be misleading.

I see what you are driving at Gary, and I would probably agree for high speed CW where the length of the dot is short. For instance, at 45wpm and 1KHz a regulation dot is 27 cycles long and at 200Hz only 6 cycles long. However, when I try to copy signals buried well into the noise (i.e. 160M DX) I don't use 45wpm, more like 10wpm or less. This results in a dot 24 cycles long so the number of cycles available for the "wetware" (thats a new one on me) to settle out is comparable. I don't believe your argument is relevant.

>Another factor is the frequency response of the ear. The SPL
>required for signal detection is much higher at lower frequencies
>than at higher frequencies (up to a limit where response starts
>rolling off the other way). The area around 1000 Hz is a sensitive

>when we do that, we degrade the SNR because the amplifier contributes
>system noise of its own. If we are already in extremely marginal
>conditions, that may be sufficient to bury the signal in the noise

Atmospheric noise is always the limiting factor!

Prehaps you can explain why many years of experience has taught me that I can sometimes copy furthur into the noise (poorer SNR that is) when I turn the SPL very low; so low in fact that, even with headphones, noises of amplifier and computer fans in the shack are troublesome. Get this (i.e. watch my hands wave!) at the low SPL I find I can sometimes copy a signal only by not listening to it (OK make fun of me.) Its like night vision where you cannot look directly

at low light level objects; you have to use peripheral vision. Now, I'm a retired scientist, so I laugh at this too! But it's gotten me on the #1 Honor roll and 150 on 160M from a city lot (on 160 for 3 years.)

>It would appear that the pitch chosen by radio manufacturers has

>demanded the filters be centered. That doesn't necessarily mean
>that 700-800 Hz is the ideal pitch for OOK Morse decoding by ear,
>but it is a strong indication that it may be.

I have a Ten-Tec OmniVI that, because of the design, cannot be adjusted to copy below about 250Hz CW tone. I haven't looked at the others, except my 940 can be tuned through ZB. Just a thought. Also, for run-of-the-mill QSO's 700Hz is probably more comfortable to listen to. Digging signals out at the ESP level is a rather esoteric skill so prehaps the rcvrs aren't designed for us kooks?

>Now I have a notch in my hearing response due to being exposed to
>lots of gunfire without ear protection in the late 1960s. So I

>better at a substantially *higher* pitch. It wouldn't hurt to have
>your hearing tested. Then you would know the response of the system
>and could tailor signal pitch to it more intelligently.

>Gary

Many years ago I did a lot of high-intensity noise studies on jet engines and exposed my hearing to compressor whine (~4KHz) and the rest of the jet noise spectrum. My hearing was tested at yearly intervals for 35 years and, even though we used ear plugs and ear protectors, I have a decided dip at 4KHz so prehaps that could be a contributing factor but do copy high-speed CW at a higher note (when I have too.) But, I still believe my original argument has more merit.

It may also be a convenient/low cost offset for the manufacturers to use,
given the design of SSB transceivers. Gary will know more about that than
I do. But it's interesting that top-of-the-line rigs are now offering
offset pitch adjustment with tracking sidetone.

You are both right, and an ideal pitch for CW requires a balance between
the factors. Another factor: many people find certain pitches,
particularly high ones, annoying. It can be very hard to concentrate on
CW copying when the pitch is producing the effect of fingernails
screeching on a blackboard.

So you have to balance all the factors with your own physiology, the receiver's response, and also the type of noise present. I have used tones as low as 400 Hz and as high as 1200 Hz. My preference is for 600 or 650 Hz. When operating CW, I set the RIT so that my tone of choice is centered in the filter, and tune for the appropriate musical interval lower than my sidetone--usually a minor third to fourth.

Personally, I dislike 800 Hz, which my old Icom 745 produces. So I always set the RIT off 200 Hz when operating CW. Now that I have a Timewave DSP-59+ and an Icom 751A, I use 650 Hz, which is close enough to the 751As sidetone that I can still hear the latter even with very narrow filtering.

It is very true that the same absolute difference in Hz translates to wider differences in musical pitch as you go lower in frequency. But there's a tradeoff--higher pitches seem to get certain kinds of noise better. Also, as you get lower in pitch, it's more difficult to tell the differences between musical intervals, particularly for someone without musical training.

Which reminds me of an old anecdote about the French conductor Pierre Monteux. After a rehearsal, a contrabassoon player asked him, "Maestro, my part has been scribbled over in bar 210, and I can't read it. Is that note a C or a C sharp?"

"Play ze C," said Monteux.

<insert appropriate Bronx cheer noise>

"Now play ze C sharp."

<insert appropriate Bronx cheer noise>

"Monsieur, play whichever one you like. Zere eez no difference!"

73,
Peter - KD7MW

>service. Now, Amateur Radio has evolved into something else, a hobby.
>
>It can be still be used as a vehicle for experimentation, or a means of
>providing a public service. But in the end, its a hobby just like fishing.
>Is that bad???

gary@ke4zv.atl.ga.us (Gary Coffman) responds:
:Yes, I think that's bad. To an extent, you are correct that amateur
:radio has devolved into just a game, like trophy hunting, or a bass
:fishing contest. It may have entertainment value for the participants,
:but does it have enough value to the public interest, the national
:interest, or the international interest to preserve the service?
:The spectrum consumed by amateur radio has vast commercial value.
:Can we ju[Astify retaining it merely on the basis of a game? Unlike
:fishing, where the waters used have multiple uses (hydropower, urban
:drinking water supply, transportation, etc), amateur spectrum is
:blocked from other uses as long as amateurs occupy it. So amateurs
:need a better justification than recreation to keep such a valuable
:resource.

No Gary, not a game but a hobby. Webster defines hobby as "a persuit
outside one's regular occupation engaged in for relaxation". It can be a
game for some, but it doesn't have to be for all. Allthough the spectrum
we occupy can't be used by other services we hardly occupy anything
remotely approaching a large percentage of the available spectrum.

>Consequently, the structure we use to license new hams also needs to evolve.
>I think that a new potential ham ought to be tested for proficiency in
>the areas they intend to operate. Tests wouldn't necessarily be easier,
>just pertinent to the operating priveledges sought. Many of the people
>I see at our VE sessions are just looking for a reliable means of local
>communication.

:Then you should direct them to the nearest cellular phone service
:provider, or to the nearest provider of GMRS equipment. The amateur
:service is ill served by those who just want to use it as a substitute
:for commercially available services of equal or better utility.

If you reread FCC 97.1 these people looking for reliable local
communication more than meet the basis and purpose of Amateur radio.

I suggest it is your interpretation that is skewed.

:OTOH, if they want access to spectrum for use as a learning laboratory,
:for use in public service, for use in RF experimentation, or for use
:in support of exploiting other new uses of communications, then they've
:come to the right place.

Sorry. I completely disagree. Using your criteria as a litmus test, 99.5% of the hams I know don't qualify to be hams and this includes some extremely bright technical minds. That's not to say they don't engage in some experimentation, or some of the other things you suggest but primarily for most of the hams I know, its a hobby.

The mod is easy. This will give you 137-174mhz and 410-470mhz Tx/Rx.

1. disconnect power and antenna (like, you would'nt of done it already.)
2. open up the case by removing the screws and gently removing the cover and unpluging the speaker.
3. locate and CUT the GREEN WIRE on the CONTROL BOARD (the vertical board behind the control panel.
4. reassemble the radio.
5. RESET THE MICROPROCESSOR (so much for the memory!)

(press and hold [D/M] & [REV] & [ENT] & turn the power on (got enough fingers?).

(turn off the radio).

(press and hold [SCAN] & [HOME] & turn on the radio (extended RX mod).

Tha, Tha, Tha, That's All Folks!

2370. Where to ftp terminal program from?

Newsgroup: rec.radio.amateur.misc

Hi Folks,

I'm looking for a decent terminal program for a PC that will be compatible with an AEA PK232MBX. Does anyone know of a site (and the name of the program!) where one could be ftp'd from? I have looked at a few sites but they contain thousands of programs, I don't know which is best! Email me privately if possible.

Cheers,

James

I have always heard about ham radio, and I am very interested in
becoming an operator. Could you please tell me what kind of equipment
is needed for a beginner? And how I can become an operator... and any
information you can give to a potintal ham radio operator.
Thanks,
John Wever
jwever@netdoor.com

2372. Re: Boxborough in Oct.

You are correct. However, there is not a great deal of overlap if you think about it. Roachfield (aka Hosstraders) is pretty much over at noon on Saturday. Boxborough is on Saturday and Sunday. So, look at it as if it were a three-day ham radio party at two places.

While I'm here re: Deerchester/Boxborough, I might add that this year two of my friends are on the Hamfest Committee - Mike Raisbeck K1TWF is the Program Chairman and Dave Foner WA1TET is the Flea Market Czar! So if any of you have any ideas, suggestions, comments, etc, you can address them to the appropriate person. Mike K1TWF's e-mail address is mike@rtr.com.

Also, "Boatanchor" enthusiasts will be welcome to set up displays, hold forums and swap and buy stuff. A very well-known AMer (whose identity is a closely guarded secret) will be guest speaker and master of ceremonies. Its gonna be a great party!

73,

Michael

Hi Folks,

Could anyone tell me where I would be able to ftp a good terminal program for a PC from. I know of several sites, but they contain many program, what I really need is a site, and program name. Any help would be appreciated. Email privately if possible.

Thanks,

James

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and TNC/PACKET DOOR IS UP & RUNNING !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,800 FILES IN 115 FILE AREA'S..so far !
GOOD NEWS THE LANDLINE TO HAM PACKET DOOR IS UP AND RUNNING*******
ARE YOU ON THE HAM USERS LIST ???????

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.
INTERNET E-MAIL ADDRESS:> kb6axk@ix.netcom.com

2376. Drawing Schematic Diagrams on FCC Exams

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: Kevin Schmidt <kschmidt>
Message-ID: <4fvspi$1ps1@theory.tc.cornell.edu>
Source record: 230649

I have been told that, in the distant past, the FCC required applicants to draw schematic diagrams of various simple circuits on amateur radio exams. I am curious when this stopped.

Certainly the ARRL license manual had questions about drawing schematic diagrams when I studied for my license in 1965-1966. It also only had essay type questions and answers. My general class exam in August 1966 and my advanced/extra exam in 1968 were completely multiple choice, with no essay questions, schematic diagram drawing, or anything that required a human to grade. Further my father took the novice, technician and later advanced exams in 1967-1969, and he had no schematic drawing on any of these. So my personal evidence is that the FCC had removed these questions by 1966 if not well before. Since the general class exam that I took in 1966 had questions that would have been reasonable in 1936, I doubt if the exam I took was some newly developed one. (For example, although SSB had supplanted AM on HF, there were no SSB questions, but rather questions like "downward deflection of the plate current meter, when modulation is applied, is an indication of...")

Please post if you took a technician or general exam before 1966 and did not draw schematic diagrams. It would be amusing to find approximately when they were dropped.

Kevin w9cf@ptolemy.la.asu.edu

2377. Re: Lets open 10 !

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: horowitz@nosc.mil
Message-ID: <1996Feb15.080429.8117@nosc.mil>
Source record: 230650

Nowadays, your 10 meter openings will almost always be Sporadic E. Summer will be even better for that.

2378. "blast through" blanketing sporadic E by polarization tricks?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: horowitz@nosc.mil
Message-ID: <1996Feb15.075858.8009@nosc.mil>
Source record: 230651
Cross-posted to: rec.radio.amateur.misc,sci.physics.electromag

Do the clouds which comprise ionospheric sporadic E, have any known bi-refringent properties or soesuch, which would allow signals to reach the above-lying F layer, through polarization diversity? Or by any other trick?

2379. GB2RS News 18th February 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>

Good morning. It's Sunday the 18th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First this week's headlines:-

The RA's offices have been extensively damaged.

And the sunspot minimum is still a year away.

The new offices of the Radiocommunications Agency in Docklands were extensively damaged in the recent bomb blast. Thankfully none of the RA staff was badly hurt in the incident. We have received the following message from the RA:

"Following the bomb explosion in Docklands last Friday, the Radiocommunications Agency has had to move out of their headquarters building at South Quay Three. At this stage the Agency does not know where or when it will be relocated. The Radio Licensing Centre at Bristol is unaffected, but please keep enquiries to a minimum."

The RSGB's prestigious National VHF Convention is taking place today, the 18th of February, at the usual venue, Sandown Park in Surrey. The event features a full VHF, UHF and Microwave lecture programme, together with a trade show, special interest groups and an RSGB stand. The official show guide, including a map, can be found in the February edition of Radio Communication.

Another VHF Round Table will be held at the BT Laboratories, Martlesham Heath, near Ipswich in Suffolk on Sunday the 31st of March. The event will include round table sessions and seminars, testing facilities and a bring and buy stand. For BT Labs' security reasons, all access is by advance booking only. For tickets, send a list of the names of all persons attending along with a stamped, self-addressed envelope to Roy Smith, G0RRC, whose address is correct in the RSGB Call Book.

A new GB2RS news broadcast started on 2 metres last week. It covers the West Wiltshire and East Avon areas, which only had marginal VHF service previously. The new transmission is broadcast at 2030 local time on channel S21 from the Bradford-on-Avon area. Reports would be welcomed by main reader G0GRI and reserve readers G0HFX and G4YXS.

There will be a radio Scouting meeting at Youlbury Scout campsite in Oxfordshire from the 10th to 12th of May. This will be an opportunity to meet others involved in radio Scouting, to swap thoughts and ideas, and take part in discussions that will contribute to the development of

radio Scouting. A radio 'foxhunt' and barbecue have been organised, and indoor accommodation and meals will be provided. Numbers are limited, so if you are interested, contact the 'Scout Radio Newsletter' as soon as possible. The address is 19 Cleeve Close, Astley Cross, Stourport on Seven, Worcestershire. The postcode is DY13 0NY.

The draft of the EU EMC Standard has been published by the European Telecommunications Standards Institute. It covers testing procedures and test limits to ensure compliance with the EU EMC Directive which came into force on the 1st of January. The RSGB, through its EMC and Licensing Advisory Committees, is considering the document and will be responding in time for the 8th of March deadline. Copies of the document are available from the British Standards Institution, 389 Chiswick High Rd, London, W4 4AL. Their telephone number is 0181 996 9000.

City and Guilds has issued reports on the December 1995 Radio Amateurs' and Novice Radio Amateurs' Examinations. Those wishing to receive copies of either report should send a 19 pence stamped self-addressed envelope to Lynnette Ranger, 2E1EKT, at RSGB HQ, specifying which report is required.

Now some items from the RSGB HF Contests Committee:

Groups intending to take part in the RSGB's National Field Day contest on the 1st and 2nd of June are reminded that they must register, by sending details of the site to be used to David Hill, G4IQM, by the 9th of April at the latest. For further details see page 4 of the RSGB Contesting Guide, which was published in the September 1995 RadCom.

The RSGB HF Contests Committee will be holding an all-day meeting in mid-April in order to examine the thinking behind all current RSGB HF contests, including the mix of modes in the present range of contests. The committee would welcome the views of any RSGB member, and these will be discussed at the meeting. Input should be addressed to Chris Burbanks, G3SJJ, Chairman of the HFCC, to arrive not later than the 12th of April. Chris's address is correct in the RSGB Call Book.

Special contest callsigns, for example, G6A or M6B, should be available soon for use by clubs taking part in major worldwide contests. The RSGB's Licensing Advisory and HF Contests Committees have responded to a draft proposal from the Radiocommunications Agency and it is hoped that the scheme will be introduced in the near future. The licence will be a letter of variation on existing club callsigns. The HFCC, who will be responsible for allocating the calls, have said that no reservations will be taken for specific combinations. A fair method of distribution will be announced when the scheme is introduced.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Myanmar, formerly Burma, a group of Finnish operators including Martti Laine, OH2BH, his wife Leena, OH2BE, and son Petri, OH2KNB, will be active from today, the 18th of February, until the 28th of February.

They will be active as XZ1R using two stations with amplifiers. Look for them on CW on 1824.5, listening 1831 to 1833, 3504, 7004, 10114, 14004, 18074, 21004, 24894 and 28004. On SSB listen on 1845, 3795, 7042, 7095, 14195, 18145, 21295, 24945 and 28495 kHz.

From Crozet Island - FT8W - Rene, FR5HR, plans to be active from now until next Monday, the 26th of February, before going on to Kerguelen Island, FT8X, and then Amsterdam Island, FT8Z. However, his schedule may change due to the weather.

And from the Azores - CU - DL4XS and DL3KDV will be active from Monday the 19th of February until the 4th of March on all bands. The emphasis will be on 160 metres. Look for them around 1827 kHz.

Next the Rally News:

The RSGB VHF Convention is taking place today at Sandown Park in Surrey, as has already been mentioned. Other than that, we know of no rallies today.

Next Saturday, the 24th of February, the Rainham Radio Rally takes place at Rainham School for Girls, Derwent Way, Rainham, near Gillingham in Kent. The event features traders, a bring and buy stand, special interest groups and an RSGB bookstall and membership information stand. Doors open at 10.00 am or 9.30 am for disabled visitors. Talk-in by GB4RRR is on 2 metres channel S22, and further details may be obtained from Martin, G7JBO, on 01634 365980.

Also on Saturday the 24th, the Tyneside Amateur Radio Rally takes place at the Temple Park Centre, South Shields. This rally also features an RSGB bookstall and membership information stand, and Morse tests will be available on demand. Please take the appropriate fee and two passport-size photographs with you if you wish to take your Morse test at the rally. Talk-in will be on both 2 metres and 70 centimetres. Please note that doors open at 11.00 am, or 10.30 am for disabled visitors - this is half an hour later than the times listed in RadCom. For further details contact Stuart Hill, G0BEV, on 0191 281 0999.

On Sunday the 25th of February, the Barry Mobile Rally takes place at Barry Leisure Centre. Doors open at 10.30 am, or 10.00 am for disabled visitors and further details may be obtained from Brian, GW0PUP, on 01222 832 253.

Also next Sunday, the 25th, the Taw and Torridge Rally takes place at the Bideford Centre on the Quay at Bideford in Devon. Doors open at 10.15am and further details may be obtained from Mike, G3PGA, on 01271 860 930.

On Saturday, the 2nd of March, the West Wales Amateur Radio and Computer Rally will take place at its new venue - Penparcau School, Aberystwyth. For details call 01 545 580675.

Now a note for your diary: on Sunday the 9th of June, the Elvaston Castle Mobile Radio Rally takes place. Details may be obtained from 01332 720976, or for trade enquiries contact 01332 662896 after 7.00pm.

Now for the HF contest news:

The ARRL International DX CW Contest is taking place this weekend, the 17th and 18th of February. The contest started at 0000UTC on Saturday and lasts for 48 hours. Work USA and Canadian stations only on all bands from 160 to 10 metres - excluding the WARC bands - and send an RST report plus your power. USA and Canadian stations will send a report and their state or province. Brief rules can be found on page 22 of the February RadCom.

Next weekend, several international HF contests take place. The RSGB 7 MHz DX Contest takes place from 1500 on Saturday the 24th until 0900 on Sunday the 25th of February. The full rules are in the September RadCom.

The Belgian UBA CW contest runs for 24 hours from 1300 on the 24th of February, and the French REF SSB contest takes place from 0600 on the 24th until 1800 on the 25th. Brief rules are on page 23 of the February RadCom.

And the CQ World Wide 160 metre SSB DX contest takes place from 2200 on Friday the 23rd until 1600 on Sunday the 25th of February. Brief rules appeared on page 23 of the January RadCom, but please note that the contest starts on the Friday night, and not the Saturday as shown in RadCom. In last year's contest, G3NAS was in eighth place in the world in the DX single operator section.

Next some VHF contest news:

Next Sunday, the 25th of February, the fourth session out of five in the RSGB 70 MHz Cumulative Contests will take place between 10 and 1200UTC. The final session will take place on Sunday the 10th of March and the rules can be found in last September's RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS.

The period from the 5th to the 11th of February saw solar activity at very low levels and the geomagnetic field at quiet levels. The solar disc remained spotless throughout this period. Solar flux levels varied between 68 and 71 units and averaged 70 units. No solar flares were reported. Electron fluence levels declined from high to moderate levels. X-Ray flux levels remained at A1.0 units every day. The 90-day solar flux level on the 11th was 73 units, one unit down on last week.

Geomagnetic activity started at "very quiet" levels with an Ap index of 3 units on the 5th and the 6th. Levels then gradually increased until the 10th. From 1600 hours on the 10th, the solar wind speed increased from 400 to 600 kilometres per second. Consequently on the 11th the Ap index had increased to 18 units. During the second half of the 11th, the solar wind speed had subsided to 400 kilometres per second, and the average was Ap 7 units.

The aa indices, as supplied by the British Geological Survey for the period from the 30th of January to the 5th of February, saw levels increase from "unsettled" levels to just "active" levels on the 31st and the 2nd, with 21 and 23 nanoTeslas respectively. Levels then declined and the average was 15.7 nanoTeslas, about K2. Bartel's rotation number 2220 starts on Wednesday the 21st.

And now for the bad news: the latest information from the Space Environment Laboratory at Boulder, Colorado, has updated the forecast for the sunspot minimum. It is not now expected to occur until early 1997, with a smoothed sunspot number of 8.

I'll repeat the figures: spots - 0, flux - 70, Ap index - 7, X-Ray flux - A1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 2nd to the 8th of February, saw levels decline from 6.6MHz on the 3rd, to 5.7MHz by the 6th. There was a slight improvement until the 8th, when levels increased to 6.1MHz. The average for the period was 6.1MHz. The darkness hour lows declined to 2MHz on the 3rd but then gradually increased every day and ended the period at 3.2MHz, with an average of 2.6MHz. The daytime highs took place between 1200 and 1500 hours up to the 6th, and then between 0900 and 1000 hours on the 7th and the 8th. The darkness hour lows took place between 0500 and 0600 hours up to the 6th and then at 2100 and 2000 hours on the 7th and the 8th.

I'll repeat the figures: highs - 6.1MHz, lows - 2.6MHz.

And lastly the solar forecast:

From the 23rd of October last year, except for a five day period from the 3rd of January, solar flux levels have been no higher than the 70s. This trend looks set to continue over the coming week. Solar activity will remain at very low levels with the solar flux levels increasing slightly to the mid 70s. Also from the same period, geomagnetic activity has declined with only six days when levels have been above an Ap index of 20 units or more. Activity for this week is expected to remain at quiet levels with an Ap index below 10 units every day. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Whisky and G7 Whisky Golf series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Tango series.

2380. Re: Alinco DX-70 hum on 6 meters

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: Joe Fitter BV/N0IAT <FITR%mimi@magic.itg.ti.com>
Message-ID: <4fv577$9c1@tilde.csc.ti.com>
Source record: 230653

Hi Bryan,

I've had one of those rigs for about 8 months with no reports
of problems. However, I own the DX-70 Japanese model
(not the T model, so my unit did not come with CTCSS.
I have had no problems with the unit in FM -- reports are
consistently good on both 10FM and 6 too. As the other
ham suggested, perhaps RF is getting into your radio. Here is
what I would suggest for starters, to eliminate the obvious:

a. Does the hum change if high or low power? You need to
work a station who is close enough to be "full quieting FM"
on both high and low power. RF may be getting into the rig
or the microphone on high, but not low power.
If it goes away on low power, it could be RF in your rig or
more likely into your power supply.

b. Can the new power supply handle 19 amps of current continuously?
My rig draws about 19 amps on FM...which is a continuous duty
mode. Could be power supply hum if not hefty enough.

c. Are you using the Alinco microphone? After-market mic's
(especially electrec condenser mic's) can be prone to rf
and cause a hum in the transmission.

d. You mentioned CTCSS. Does the hum persist even after you turn
off your ctcss encoder? Go simplex with a buddy to find out
if your FM rptrs require CTCSS to access them. Or, just have
a buddy listen to your input frequency with and without CTCSS
encode.

e. Does the hum change frequency (pitch) when you change the dip
switches on the ctcss encoder board? If so, then the deviation
on the CTCSS board may be set too high. There is a small
surface mounted resistor on the ctcss board. Open the underside
of the radio and adjust the ctcss level...you can do this if you
are careful without the aid of test equipment.

f. Is the VSWR below 1.5:1 at your rig and antenna? VSWR can
sometimes cause funny things to happen to surrounding shack
equipment....which can induce a hum into your FM rig.

g. Does your rig sit on top of the power supply? Some rigs can
pick up the "hum" of the power supply even though the mic is
far from the source of the hum. Move the rig off of the
power supply.

These are some ideas...have had problems with hum before, but "usually a quick lesson to teach the radio all the words" solves the humming problem (sorry...old old joke couldnt resist).

Good luck and keep us posted on your findings.

73, Joe

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

2383. ARLB009 PRB-1 change sought

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb009.1996@arrl.org>
Source record: 230656
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB009
ARLB009 PRB-1 change sought

ZCZC AG88
QST de W1AW
ARRL Bulletin 9 ARLB009
From ARRL Headquarters
Newington CT February 15, 1996
To all radio amateurs

SB QST ARL ARLB009
ARLB009 PRB-1 change sought

The ARRL wants the FCC to take additional steps to compel state and local governments to make reasonable accommodation for Amateur Radio under PRB-1 and apply the least restrictive means to regulate amateur antennas and activity. In a Petition for Rulemaking filed February 7, the League calls on the FCC to amend Section 97.15(e) to say that any state or local ordinances restricting ham radio antennas to heights below 70 feet would be presumed unreasonable, unless the state or local authority could show its restrictions support a clearly defined health, safety or aesthetic objective. State and local governments also could not impose substantial application costs on amateur service licensees.

The League also wants the FCC to acknowledge that it has an interest in the effective performance of Amateur Radio stations in areas regulated by deed restrictions or restrictive covenants rather than by local zoning ordinances.

The League says clarifying the preemption policy (PRB-1) would help guide municipalities to enact provisions that make fair accommodation for amateurs and avoid highly divisive litigation between hams and localities.

Under the suggested changes, state and local governments could apply to the Commission for a full or partial waiver of the amended rules in unusual circumstances.

The FCC has not assigned a rulemaking petition (RM) number.

Here is the suggested wording of Section 97.15(e) the petition requests:

(1) State and local regulation of a station antenna structure must not preclude amateur service communications. Rather, it must

reasonably accommodate such communications; it must constitute the minimum practicable regulation to accomplish the state or local authority's legitimate purpose; and it must not impose substantial costs on amateur service licensees.

(2) Any state or local antenna restriction or regulation which, on its face or as applied, would limit amateur station antennas to heights below 70 feet is presumed unreasonable unless the promulgating authority can demonstrate that such regulation is necessary to accomplish a clearly defined, and expressly stated health, safety or aesthetic objective; that there is no less burdensome alternative to the regulation; and that the Federal interest in efficient amateur radio communications from the amateur station at issue is otherwise reasonably accommodated.

(3) Any state or local authority, or other entity that wishes to maintain and enforce zoning, land use or other regulations or restrictions inconsistent with this section may apply to the Commission for a full or partial waiver of this section. Such waivers may be granted by the Commission in its sole discretion, upon a showing by the applicant that local concerns of a highly specialized or unusual nature create an overwhelming necessity for regulation inconsistent with this section. No application for waiver shall be considered unless it includes the particular regulation for which waiver is sought. Waivers granted according to this rule shall not apply to later-enacted or amended regulations by the local authority unless the Commission expressly orders otherwise.

I did a SH/DX 10 on our DX Packet Cluster and during Feb found several DX spots for 10 Meters including ZL, PY, and LU stations. Band is very dead most of the time however. If you can get on your local DX Packet Cluster any 10 Meter DX activity will be posted there -- DXers don't miss a thing HI HI.

Hello all

Has anyone ever done any work to quiet down the ignition system (spark impulse noise) in a gasoline powered vehicle?? I wonder if one could use large ferrite beads to choke off the spectrum of the spark from radiating off the wire at the frequencies of interest. 1 mhz and above? I have done a lot of grounding , and am using resistor plugs and wires.. Are there any shielded wire kits out there?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 FEBRUARY AND FORECAST FOR 16 FEBRUARY - 18 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 14 Feb
Daily Proton Fluence >1 MeV: 4.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.5E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Feb 17 Feb 18 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Feb: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled with one active period

Estimated Indices : A K Observed A Index 14 Feb
Learmonth 12 3213 3242
Fredericksburg 7 16
Planetary 10 13

Observed Kp for 14 Feb: 4333 3321

2B. MAGNETIC FORECAST
Date Ap Conditions
16 Feb 16 Unsettled
17 Feb 12 Unsettled
18 Feb 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
15 Feb Normal Fair Fair-poor
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
16 Feb Normal Normal-fair Fair
17 Feb Normal Normal Fair
18 Feb Normal Normal Normal
COMMENT: High latitudes may experience degradation in HF comms
quality until 17 Feb.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
15 Feb -14

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values, spread-F observed
during local night.
Townsville: Blanketing sporadic E observed during local
daylight hours, depressed 30% during local night hours.
Sydney: Depressed 15-30%, MUFs recovered after dawn.
Hobart: Depressed 15-30% during daylight hours, blanketing
sporadic E during local night.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
16 Feb -5 depressed 10 to 15%/near predicted monthly values
17 Feb 0 near predicted monthly values
18 Feb 5 near predicted monthly values
COMMENT: The quality of HF comms for southern region circuits
may be slightly degraded until 17 Feb.

Yep I saw that program too, VERY interesting, I tried DEC's Alta Vista
search engine, but no luck there?... maybe it's a cover up, although I
did see a Netscape screen in the office of the protestors?..

"The truth is out there." :)

Max.

From: gary@ke4zv.atl.ga.us
Message-ID: <1996Feb15.160117.12366@ke4zv.atl.ga.us>
Source record: 230662

In article <4fuarh$t9a@axe.netdoor.com> jwever@netdoor.com (John Wever) writes:
>
>I have always heard about ham radio, and I am very interested in
>becoming an operator. Could you please tell me what kind of equipment
>is needed for a beginner? And how I can become an operator... and any
>information you can give to a potintal ham radio operator.

John, the equipment can range from very cheap and simple to very expensive and elaborate depending on what you want to do, and on whether you must buy the latest shiny toy or will be content with used or home built equipment. The results you achieve are only partially due to the expense of your equipment. Good operating skills can make up for a lot of equipment deficiencies, and home constructed equipment can actually be superior to factory built gear in many cases.

You must decide whether your interests lie at HF or VHF+ to start. Different equipment is needed for those different parts of the spectrum. In either case, the most valuable equipment you can own besides the grey matter between your ears is a quality receiver. Don't scrimp here.

Most amateur equipment today is configured as a transceiver. This is a combination of a transmitter and receiver housed in the same case. When shopping for such equipment, concentrate on receiver performance. In most cases, a transmitter is a transmitter, if you've seen one, you've seen them all. It's the receiver portion that's all important. There's an old saying, "You can't work'em if you can't hear'em", and that's very true.

Ignore bells and whistles, out of band performance, and the like. That's unimportant (and usually hurts amateur band performance and drives up costs). Concentrate instead on the basics. Good sensitivity, good selectivity, and good strong signal handling performance are what you're looking for.

The used market is a very good way to get equipment cheaply. There are many fine radios which are a few years old but still perfectly servicable. Many amateurs just have to have the latest gimmick on the market and trade frequently. That is a wonderful opportunity for the frugal bargain hunter to equip a very nice station at low cost.

There are two basic ways to enter amateur radio, the Tech or the Novice license. If you are interested primarily in

VHF+ operation, IE FM, repeaters, packet, satellites, EME,
ATV, etc, then the Tech license is for you, and may be the
only license you'll ever need. There is no Morse Code test.

If HF and the DX game is your desire, then you'll want to
start with the Novice license, and work on your Morse Code
speed so that you can move up to General as quickly as possible,
and from there learn some theory to take you on to Advanced
(you may never need Extra as it grants few extra privileges).

The ARRL publishes training materials. Start by pointing
your web browser to www.arrl.org.

2390. Re: Is it feasible to HAM broadcast out of an apartment?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDMtzv7.3zK@netcom.com>
Source record: 230663

In article <4fv958$c6o@taurus.neca.com> rwilson@neca.com writes:
-It DOES tend to suck being a ham and living in an apartment.

Definitely...

-Running HF *can* be done, but not too well.

I thought the same thing but ignored that thought. I use a 20M Hamstick clamped horizontally to my windowsill, with the metal frame and siding as a counterpoise. 100W from the TS-130 or TS-50 has gotten 116 countries. Now if only 4 more will QSL :-) Of course I'd prefer stacked monobanders on 200' towers, but that'll be hard to do in Boston.

-I was in an apartment which was below the ground level.

That will make things tough. Maybe you can feed something (downspouts? plumbing? flagpole) at the bottom? Run a wire up a tree?

/mike

3B8 - [Mauritius] Since 16th February , for two weeks , Peter - DK1RP
from Jacky's QTH (3B8CF).All QSLs for the contacts will be sent
via the bureau.[A good example to follow].
3V - [Tunisia] Starting 1st of March until 10th , DL8HYR (Frank) is
going to 3V8BB.Mainly on Satellite and EME.Possible operation
on the low bands.
YT1AD also from 3V8BB during the CQ WPX SSB contest.QSL via H.C.
5X - [Uganda] ON6TT (Peter) is in mission for the United Nations.
This could take from 6 moths to 2 years.He will be active from :
9X, 9U, 9Q, 5H, ST, ST0, T5, 5Z, E3, ET etc.Operation from Uganda
mainly on SSB/RTTY , CW on request.QSL via ON5NT.
8Q - [Maldives] HB9CYU (Chris) and HB9CZR (Rolf) , from 14 to 20 Feb. ,
as 8Q7YV and 8Q7ZR.
9L - [Sierra Leone] 9L1JC (Jim) his QRV until August 96 .
C56 - [Gambia] DL2RUM ,DL7BO ,DL7DF ,DL7UFR and DL7URH will be QRV :
CW : 1.822, 3.505, 7.005, 10.115, 14.005,18.073,21.005 MHz.
Also on operation on SSB.Look for the low bands and maybe on
Satellite AO13 , 6 meter are also possible.QSL via DL7DF
(ex-DL7UUO).
CQ5_ct - [Portugal] CT1FMX and CT1EWA plan to work from "Nazare'
LightHouse" (Ref: FBL-04) from 23 to 25 February.
The Callsigns issued for this event were : CQ5FMX and
CQ5EWA.This activation also counts for the Portuguese
Castle ' Awards , "Forte S.Miguel Arcanjo " , (Ref: F-027).
QSL via Bureau or Direct to Home Calls.
```

DL_ant - [Antartida AN-016] An new HAM is QRV from DP0GVN (Alemc Georg
Neumayer) - Ref. WABA DL-03 IOTA AN-016.This station is located
in the Princess Martha Coast.
EJ_iota - [Great Blasket EU-009] From 7 to 10 July the WestNet DX Group
and some HB9 op. will activate the Great Blasket Island (EU-007).
The Callsign is EJ7NET and QSL goes via EI6FR.
FS - [St. Martin] From Feb 22th. to March 6th. N0BSH using call
FS/N0BSH.He will enter the CQ 160 SSB Contest and ARRL DX
SSB Contest together with WE9V and WX9E at FS5PL.
QSL for FS/N0BSH via N0BSH , for FS5PL via WX9E (Only for
the Contest Operation).
Look for Mike's correct address below on QSL info.
Operation from 10 to 160 mtrs + WARC Bands , CW + SSB.
J6 - [St.Lucia] Until the end of February , YT1AD his QRV from St.
Lucia with the call J68AD.QSL via Home Call.
Also from 9 to 23 of March , Walter , DL6SDS is going to operate
as J6/DL6SDS.
JX - [Jan Mayen] JX9ZP is QRV from this Island , where it works !
OA_ssh - [South Shetland] During one month , OA0MP from the Antartic Base
"Peruana Machu Picchu" (WABA OA-01) located in the King George
Island (62.04S-58.27W).Special atention to the weekends around
23.00 UTC on 14.260 Mhz.QSL via OA4WM.
P5 - [Korea do Norte] Possible operation in February by OH2BH and
OH0XX.
PY0_iota- [Trindade Isl.] PY1UP is staying in this Island till March 96.
He his QRV on SSB/CW , 80 to 10 meters.Ref. for Awards are :
IOTA SA-010, DIB-02, DFB OC-04. QSL via PY1UP , see address below.
The callsign issued is PY0TI ...
S0 - [Western Sahara] EA2JG and some EA's will be active as S020R for
a whole week , starting 20 th this month.
They will be QRV on the usual bands , SSB and CW.
QSL via EA2JG , only direct.The Adress is listed below on QSL
info.
SJ9 - [Sweden] SM0DJZ will be on Morokulien , from 15 to 19 February
for the ARRL CW Contest and DARC HF RTTY Contest.Morokulien is
located between Sweden and Norway so John will have two calls
(for DXCC) SJ9WL [SM] and LG5LG [LA].QSL via SM0DJZ.
This is a good chance to "get" the MORKULIEN AWARD.To have more
information contact SM0DJZ !
UA0 - [Zone 23] UA0YAY is QRV from Oblast 159 - Tuva , CQ Zone 23.
QSL via Box 40, Kyzyl 667011, Tuva, Russia.
V4 - [Nevis] N0BSH will be QRV from V4 starting Feb 14th to 21th.
He will participate in the ARRL DX CW Contest.The callsign
is V47NZ.QSL via N0BSH (See below , on QSL info)
Operation from 10 to 160 mtrs + WARC Bands , CW + SSB.
VK8_iota- [Melville Island] From March 8th to 11th 1996 , two VK8's will
be QRV from this Island.They are : VK8HZ and VK8NSB.
Operation from 6 to 80 meters.QSL via VK4AAR (only direct).
Correct address of VK4AAR on 95 or 96 callbook.
The operators will be on the air at the same time with two

stations.Dates and callsigns can change ! The IOTA Ref. is OC173.
VK9C_+X - [Cocos Keeling & Christmas Is.] DL8WPX, DK7YY, DL3DXX and DL7UFN
will be active from Cocos Island as VK9CR , from 13 to 22 Feb.
and later as VK9XY (Christmas Island) , 23 and 24 February.
QSL via DK7NP.
VP2E - [Anguilla] AA4NC is in Anguilla until Feb.20th with the call VP2EN
Also from this spot KC0ZC (VP2ES) , WA0PUJ (VP2EZ) and N0ZS (VP2E)
starting Feb.28th to March 5th.QSL via Home Calls.
VP2M - [Montserrat] WA2UJH will be back in Montserrat .He will operate
with the call VP2MDY , from 16th February to March 1st.
Operation mainly on CW , 160 to 10 meters.QSL via NW8F.
XZ - [Myanmar/Burma] OH1MA, OH1RY, OH0XX and OH2BH , with calls XZ1A
and XZ1R from 20 to 28 February.
ZF - [Cayman Is.] K3DI is going to participate in the ARRL CW Contest
(17/18 Feb.) as QRP.Callsign is ZF2OP.QSL via K3DI or W3-Bureau.
ZK1 - [South Cook Is.] K8PDY and WT8S expect to operate from S.C. Isl.
from 17th to 24th February.Operation mainly on CW/RTTY a some on
SSB.Callsigns are : ZK1PYD and ZK1WTS.Also very active is ZK1DI
with strong signals on 40/80 meters.QSL via DK1RV.
ZL7 - [Chatham Island] Barry (ZS1JF/G3MFW) will be QRV from this Island
, 15th to 19th February . This is mainly an SSB DXpedition.
The callsign is not issued yet.QSL via KA1JC.
ZS - [Africa do Sul] Our CT friend in South Africa (ZS6AOO) is QRV as
ZSM6A until Feb 21st. QSL via WA3HUP.
ZW5 - [Brasil] Imbituba Lighthouse (DFB SC-09) , from 15-25 Feb.
Operation on SSB/CW from 80 to 10 meters.QSL via PP5VB , address
below (on QSL info).Callsign to be used is ZW5IZ.
ZW8_iota- [Grande Santa Izabel Isl.] Activity starting 16th February till
20th.The Ref. are : IOTA SA-025 , DIB-19.QRV from 80 to 10 meters
on SSB/CW.The callsign issued is ZW8P.QSL via PS8DX.

NPDXG Bulletin #12 [2/3]

I1HYW Management list -> Gianni is QSL manager for the following ARS :

UA0X/EK250RA 4K4/EK250RA EK250RA YB5NOC
N7UJN/A (NA169) R3RRC 4K3RRC 4K4RRC
4K5RRC 4K4/UA9OPA 4K3WQ 4K3GW
4K3/RW3GW UW1ZZ/A RW9OWM/0 RZ1AZO/1
4K3/RA3YG JI6KVR/6 LU3CQ/D AZ1D
VK6ISL VK8ISL TI2LAK/HP4

He does not QSL via Bureau , only direct to :
I1HYW, Gianni Varetto, P.O.Box 1, 10060 Pancalieri (TO), ITALY

Info BV9P QSL Cards -> KU9C (BV9P QSL Manager) is waiting for the QSL
Cards from W4MPY.The first package of QSL's should be out till February
29th.Steve is counting with K2PF for help . They everybody to have the
QSL's ready for submission in April 1st.For those who want a QSL via
the bureau just send a note to Steve with the QSO details and he will

reply via the bureau (Don't need to send QSL!).An QSL scan is on the web page [http://www.mindspring.com/~w4mpy] .

Lacepede Island DXpedition -> VK6LC is organizing a DXpedition to this Island and the Diamond DX Club asks for help on support ! Send your donations to :Diamond DX Club ,c/o I1 HYW, Gianni Varetto ,P.O. Box 1 10060 PANCALIERI (Torino) ITALY. This Island has no IOTA Ref. , they plan to give this one a new ref. just like CO0OTA , CO1OTA , VK6ISL , VK8ISL , YB5NOC ...

KC6 and XX9 by JH2MRA -> Hirotaka Asaoda (JH2MRA) is planning a DXpedition to Macau and Palau.He his trying to get an XX9 call and already has the call for Palau , he expects to go there when propagation gets better. The call for Palau is : KC6PX and KC6PR (His XYL).As soon he has more info on this we expect to inform you ! More info contact :
Hirotaka ASAODA - JH2MRA/AA5YM/PY0ZFB : jh2mra@yk.rim.or.jp (Internet)

HEARD ISLAND -> The Heard Island DXpedition Team it's reorganizing for their 96-97 operation.They have already rented a new vessel ("Marion Dufrensne"). The team is composed by : EA8AFJ (Michel Sabatino), HB9AHL (Willy Rusch), KA6W (Ted Algren), K0IR (Ralph Fedor), KK6EK (Robert Schmieder), N6EK (Bob Fabry), NP4IW (Carlos Nascimento), ON6TT (Peter Casier), PA3DUU (Arie Nugteren) e RA3AUU (Igor Harry Booklan).Any contribution should be sent to ON6TT.

KERMADEC DX'PEDITION UPDATE -> License and equipment are in hand.The boat they will take should make some stop-overs in Crozet and Kerguelen.Some operation from this Islands is possible !

RS12/13 Satellite info -> This bird has changed the operation mode to T. Now to use the satellite you will need two equipments, one for 21 Mhz and other for 145 Mhz (Both with SSB).It's equiped with a linear transponder (Up SSB / Dwn SSB).The Uplink is in 21 and Downlink on 145. The freq. :

UPLINK DOWNLINK

Robot : 21.170 145.907 : Beacon

2393. Where do I go first to get info on obtaining a ham license?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: bvolden@ionet.net
Message-ID: <4fvuja$9du@ionews.ionet.net>
Source record: 230666

I'm sure this question gets asked alot, but I was wondering where I should go to get info on obtaining an amateur license. I just read 'Enigma' by Robert Harris and I got all caught up in the nostalgia of sending coded messages across the ether...

Thanks.

Brent

2394. Repeater Listing

2395. Re: DX IS! (CW IS!)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: jjo@tekla.fi
Message-ID: <JJO.96Feb15081759@ds10.tekla.fi>
Source record: 230668

DX IS. Can not argue with that. Most of the hams are not true blue DXers, though. DXers are actually a small minority.

Perhaps CW IS might also be true. Pretty small minority of the hams are true blue CWers. I used to be (HSC 1182), but recently I have begun to think that my preferences should not force others to get into the hobby.

Having chased a few DX's on SSB in the recent years, I have begun to suspect that even SSB IS could be true, too. Perhaps even PACKET IS or even RAGCHEWING IS could hold some significant meaning to some of us who are less enthustiastic about CW.

>. I know that there is an effect called noise masking
>that occurs for a monotonic signal with noise in the immediate bandpass,
>and that's a FM quieting, or PLL-like, effect.

That is an interesting statement, Gary. Can you direct me to more information on this phenomena? It seems to be very relevant to the effect I mentioned where high (700Hz) tones and narrow (100Hz) bandwidth filters make CW copy difficult. I wonder if the 'noise masking' is a function of both frequency and bandwidth?

However, I've been reading about a technique of increasing signal detection
>sensitivity by *adding* noise to the signal (it has something to do with the
>behavior of chaotic systems and flipping the system to a different attractor,
>which is much easier to detect). Anyway, that may have some application here
>too, IE you may not actually be hearing the signal, rather you may be hearing
>a change in the noise caused by the presence of the signal and your brain
>is assigning that a tonal value. In other words, the tone is actually a
>psychosomatic response to the change in signal+noise. Something to think
>about anyway.

Where did you read this? I would be interested in reading it also.

Your reference to psychosomatic response could be an explanation. In, at least, one case I remember, I actually could not hear the signal as a tone (8Q7AJ on 80M in Dec '90) but I still had Q5 copy where the locals with better antennas thought I was crazy (I have the QSL to prove it!) I can imagine that sort of thing might be possible and would like to investigate it further. (Old research habits die hard, Hi.)

Message-ID: <3123b9af.10757682@news.innotts.co.uk>
Source record: 230672

Some readers have been telling me they have had problems accessing my pages.

http://www.innotts.co.uk/~asperges/

The local server has been having problems, so do please keep trying.

The pages have an extensive list of links, an explanation of aspects of amateur radio, new special pages for SWLs (listeners) with broadcast web page access, an IRC link, a tour of local historical site near the QTH, a mock exam, and even a history of Robert Burns, the Scots poet.

So it's worth the wait!

All welcome and I will reply to all e-mails sent through the pages. 2100 visitors to date (despite the recent server problems) since January.

Hi. Ham radio is a hobby that allows you to talk to other hams locally and world wide (there's about 2 million of them, so there's always someone to talk to :-). It also gives you the opportunity to serve your community by providing emergency communications during times of crisis; hams are frequently the only means of contact when a natural disaster isolates an area.

You must earn a license to operate a ham station by passing a test in radio theory and electronics, regulations, and operating procedures. There are five classes: Novice, Technicial, General, Advanced, and Amateur Extra. Each class grants more priviledges, and is more difficult. All require reception of morse code except one varient of the Technician class. With your license, you'll be assigned a callsign; mine's N4PDY. Most folks start with the no-code Technician license, which gets you priviledges that allow local contacts.

Hams operate locally on VHF (Very High Frequency). Most hams have radio sets in their cars, and talk to local friends over a 50 mile area. This is mostly through repeater stations operated by radio clubs. Repeaters pick up the signal from the mobile set in your car and rebroadcast it at high power from a very tall antenna. There are repeaters stations all over the country; every city has a dozen or more, and even rural areas are pretty well covered. Almost all these repeaters are open for any ham to use. Most hams also have small hand-held pocket VHF or UHF radios called Handi-Talkies (or HTs). These are very nifty; I have three of them :-)

Many of these repeaters can also link your signal to the telephone line; it's called an autopatch. You can make outgoing calls, but not receive incomming calls. Calls must be quite short in duration, and only personal calls are allowed; no business calls of any kind. In most cases, you must be a member of the club that runs the repeater to use the autopatch. Club dues tend to run around $20 a year.

Hams talk world wide on HF (High Frequencies), also called shortwave. With a modest station and an outside wire antenna you can talk to other hams around the world. Most of this is done on voice, but many old-timers (like me) still enjoy using morse code. Digital modes are also available, where you converse by typing messages on your computer keyboard. A device called a "terminal node controller" couples your computer to your radio; it's a

bit like a modem.

Ham equipment is not particularly cheap, but it need not be overly expensive, either. A VHF mobile set for your car runs around $300, and a good HT can be had for $250 or so. HF sets are a bit more; they start at around $900; a very good one is $2,000, and top of the line is $4,000. These are prices for new sets; there is a lively market in used gear, and you can get a good used set for around half the price of new.

There is a national organization of hams called the American Radio Relay League (ARRL). They will provide you with tons of free literature on becomming a ham, and will also put you in touch with a ham club in your area that will help you earn your license, and get the gear you need (some clubs even have loaner rigs to get new hams started). Call the ARRL at 203-666-1541 and tell them you want information about becomming a ham; they'll fix you right up. Best of luck.

Mike, N4PDY

: waters, what rules would apply?

: Thanks very much.
: KE6OCM
: --

Most opportunities to make VHF-UHF contacts are actually in port
or within 12-mile limits, so that usually the laws of the country
you are close to would apply. I have had a number of contacts in
Puerto Rico and the U.S.Virgin Islands from shipboard and have never
felt I was violating anybody's laws. Actually at sea, the comments
of others about ship's registry no doubt apply.
I have refrained in non-U.S. waters. There are, as far as I
know, no U.S.waters in the Mediterranean, so you will have to
consider Gibraltar, Spain, France, Italy..... etc.

2402. Have you read ARRL Bulletin #9 yet? A blockbuster!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-15 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <hfPJaMZ.sanderman@delphi.com>
Source record: 230675

The League is petitioning FCC to codify a more stiffly worded version of
PRB-1 into the Amateur Service Rules (Part 97). This could be a great day for
amateur radio if the Commission follows through with assigning an RM number,
and ultimately adopting this in some form. The ARRL and FCC have both
expressed an interest in shoring-up PRB-1 to the benefit of amateurs. It now
seems that the timing may be right for this League initiative.
Hope this generates some discussion. I'm sure ARRL will be forthcoming
with more information as it becomes available. Sounds like it's a petition
that deserves everyone's support, even if you may not be a fan of Newington.
It's something that will benefit all of amateur radio....

DX Bulletin 10 ARLD010
From ARRL Headquarters
Newington CT February 15, 1996
To all radio amateurs

SB DX ARL ARLD010
ARLD010 DX news

This week's bulletin was made possible with info provided by Wayne, N7NG, Tedd, KB8NW, Jaakko, OH1MA, and Contest Corral from QST. Thanks to all.

NORTH KOREA, P5. The DPRK project group has been working long and hard to put P51DX on the air and establish amateur radio in the Democratic People's Republic of Korea. Due to transportation scheduling and severe weather conditions, the group's next trip to the DPRK will not be until late April.

The goal of the DPRK project is to establish permanent on the air amateur radio activity with the large base of radio communications enthusiasts that are currently involved in radio direction finding and classroom Morse competitions.

MYANMAR, XZ. A team consisting of OH1MA, OH1RY, OH2BE, OH2BH and OH2KNB will be on the air February 18 to 28 as XZ1R. Two stations with amps will be active. Some members of this group will also be making final preparations for the XZ1N DXpedition scheduled for early April. On CW check 1824/1831, 7004, 10114, 14004, 18074, 21004, 24894 and 28004 kHz. On SSB try 1845, 3795, 7042/7095, 14195, 18145, 21295, 24945 and 28495 kHz. QSL via SCSDX-team, PO Box 111, SF 24101, Salo, Finland.

HEARD ISLAND, VK0. Tony, WA4JQS/VP8BZL, founder of the South Sandwich Island Antarctic DX Group, SSIDXG, reports his group scrapping plans for their three week operation. This is to allow the KK6EK/ON6TT Heard Island group maximum opportunities.

MACAO, XX9. Mine, JE1CTM, is in the early stages of planning a short trip and operation from Taipa Island.

FRANZ JOSEF LAND, R1F. Sergey, R1FJZ, is active on 3503 kHz and on 160 meters between 1100 and 1200z. He has worked 170 EU and JA stations on 160 meters but only VE1ZZ and KL7RA in North America. Also try 7003 kHz between 1230 and 1330z and 14243 kHz at 0915z. Sergey will go QRT in August. The Russian government may discontinue funding Arctic bases, so further activity could be rare.

SAINT MARTIN, FS. Paul, WX9E, is active from the shack of FS5PL. He will sign FS/WX9E except during the ARRL International CW Contest. Mike, N0BSH, and Chad, WE9V, will join him and be active from February 22 to March 6 signing FS/N0BSH and FS/WE9V. The group will be active on CW and SSB on all bands. Chad will make a special effort to provide RTTY contacts for those needing FS on that mode. The group will participate in the ARRL International Phone Contest. QSL FS/homecall via the homecall using the new CBA. QSL FS5PL or possible special contest call via WX9E.

NEVIS, V4. Mike, N0BSH, will be active until February 21, including an all band entry in the ARRL International CW contest. Listen for V47NZ, mostly on CW. QSL via N0BSH.

THIS WEEKEND ON THE RADIO. It's time again for the ARRL International CW Contest weekend. For full contest rules see page 105 in December QST. And good luck in the contest.

I would agree that many coversations you hear can be mindless (to
me) but to say that HAM's have no value in emergencies is to only

look at your tiny corner of the woods.

List of a few examples of how hams have helped in emergencies in the Pacific Northwest:

* '94 Fires in Eastern Washington - Hams provided primary and secondary communications for structural fire teams in the different fire complexes. In many cases hams were the only link between the Fire Boss and the field commander.

* '95/96 Floods in Western Washington - Some hams were used as fire dispatchers when dispatching was delegated to smaller areas. Others helped coordinate city flood control.

* King County Search and Rescue Association (Seattle Area) - Most SAR people are licensed hams and their primary means of communications in the field is through HAM repeaters since King County Police doesn't operate repeaters throughout the Cascades that are useable by civil service people.

* My dad and I on a hiking trip were able to help two FS rangers figure out what was wrong with their repeater and get the right equipment to make it work (not an emergency but we helped).

When you say that HAM's have no significant uses in emergencies is to say that phones, radio stations, cell sites, and power will never go out under any circumstances. All you need to do to kill communications is to knock out a couple of key switch sites.

It is hard to knock out an individual who carries a radio, batteries, and antennas around all the time.

I don't go around acting like Mr Big. However, if there is an emergency where my capabilities can be used I will help.

I don't really like to rag chew on the repeaters and actually don't spend much time on the radio. I enjoy the SAR and emergency work side of it the most. It's a good way to get involved and do some real good when stuff hits the fan. I hope your message isn't taken the way you wanted it to and people get involved in ham radio and emergency work.

BTW: Notice that the above examples had no actual communications failures. Because of the situation, normal communications channels were rendered useless. Imagine 25 fire trucks, all from different fire departments that need to be coordinated but don't have interdepartmental communications in the trucks. Quite a mess eh? Would you use cell phones? land line (really long land line)? mirrors? two cups with a string? sign language? smoke signals (plenty of smoke anyways)? None of the units had computers for reprogramming their radios, even if they did would they know how? Think about it.

FEB. 25 ARRL VE NORTH LINDENHURST,LI

From: KA2RGI@KA2RGI.#NLI.NY.USA.NA
To : EXAM@NLIBBS

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring RED (TOP) buzzer
for entry.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1996 Exam fee is $6.05, please bring exact change.
* Novice exams (elements 1A & 2) are free.

For addition information you may contact:

Tom Carrubba KA2DFO (516) 422-9684 or 422-9594

I called the ARRL before I went over to Holland for the Scouting World Jamboree and within 1 week I had a packet of info. Just be sure that you give yourself 3 month leadtime for the Dutch to process the application for reciprocal privaledges. You should be aware that some of the repeaters in Holland still use tone burst. Many are now PL. I was a guest operator for PA6WSJ, the Jamboree station and met many Dutch hams. Really a nice bunch of people.

If you are an ARRL member, just call them. They were very nice.

Jim,

I think you would get the most improvement on 80 by putting the coils near the end of the antenna (maybe 5 ft from each end). Putting them in the center will not accomplish anything over what you have now, you would still get the same amount of current into the antenna wire, all you would change would be the loading, not the signal. You want to get the most current flowing through the most wire. Coils in the center will not increase the current flow.

However, I can't begin to guess what effect the coils would have on operation on the higher bands.

You say that you cannot extend the length any. But how about adding to the rf length by going vertical (down) at the ends, or horizontal (make it Z or C shaped). From a radiation standpoint, I think that would be the most efficient on all bands.

well..you mean those tests that weren't updated very often? so infrequently that guys like Bash were able to produce credible guides to test content based on small samples of the tests?

in the early 1970s the tests were multiple choice...and there were study guides for them too.

i would doubt an fcc office test would be any harder than one of the current tests.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Hi,
I am going to be taking my Tech tests on Saturday (2/17) and am now starting to look in to what type of radios to get. I plan to put a 2M Mobile in my truck and get a more substantial base for home.

For home I'm looking into Base Multiband / Multimode Transceivers and trying to decide what will be my best bet. I was thinking of one that would cover at least 2M and perhaps 70cm. I am interested in working into Satellite and EME as well as FM and perhaps some local CW, 12V operation would be a plus but not a major requirement. I do plan on upgrading to at least General with in the next year and expanding also into some HF as well. So I would want to take that into consideration as well. possibly using Transverters get to the higher freqs for satellite and EME and going with a more basic UHF/VHF base unit.

For the mobile unit I was thinking of a rather simple 2M unit for repeater and simplex FM. I live in a rather remote area in the western foothills of the Cascades so I think one of the higher output power units would be in order. I was considering picking up one of the new Radio Shack units. As far as I can tell it has most everything I am looking for at a reasonable price. From the cross talk I have seen on the net and the write up in CQ (VHF) it seems to be a good choice.

I would like to take advantage of the wealth of experience of those out here on the net and get some input from you as to what you think. Suggestions on equipment to get or avoid as well as things to look for or useless features to not even consider. For me price, value and reliability are important, I have a modest but hopefully adequate amount set aside for starting up and want to use it wisely. The Base unit I'll be looking for used at up coming Ham fests so any information about current or older equipment would be helpful. I was thinking of picking up the Mobil new (if it is in or around the same price range as the Radio Shack unit) but am vary open to suggestions. I would also welcome comment on other accessory gear that you feel would be useful as well as thoughts on band selection (pros and cons of the diffrent amature bands) or what ever info. you would like to pass on to a newbie like myself. I know there are lots of books and other sources around and would not mind pointers to the better source like that, but I am primarily looking for personal insights and experience.

Thanks
TZ

From: Joe Fitter BV/N0IAT <FITR%mimi@magic.itg.ti.com>
Message-ID: <4g12p5$ntn@tilde.csc.ti.com>
Source record: 230546

I happened to be listening to VOA on my SWL and took a listen
up on 10 just for grins...

10 was in good shape last weekend. I heard lots of JA's
up in the FM portion of the band, centered around 29.100 and
again at 29.600 simplex. Also heard a few VK's, meaning
the trans-eq sporatic E was opening. At about 16:00
local, I copied the ZS6BCN beacon meaning ten was clearly
open to S Africa via the short path, though the sig was
heavy with QSB and maximum signal was S-2.

I agree...let's get on 10 and give a shout. Listen for Asia
on 28.500 and above (lotsa local bootleggers below 28.5 these
days).

lets hope it opens a bit for the cw contest. Could use a few
east coast Q's on 10! ;)

Joe

Lucky you. When cleaning the key, pay close attention to the dash and dot contacts. Lightly burnish the contacts with fine emery paper, then follow with plain cardboard (like a business card). Position the weight somewhere near the far end of the dot pendulum. With your analog VOM on ohms X10 and hooked across the "output" terminals, check that near zero ohms is obtained when you operate the dash lever (probably to the left). Adjust out any residual resistance with the ohms zero pot of the VOM. Now adjust the dot contact so that a clean string of dots is generated, and the meter hovers at 50% (half FSD) on the VOM scale. The dash contact is adjusted to what you feel is comfortable. It may take you some time to get the feel of the thing, so be prepared to put a good deal of effort into learning it.

Can you get at past issues of QST's? For a full description of bug key adjusting, look up QST Feb. 1934 "How's Your Fist" by F. Schnel W9UZ.

Oh, it changes, in any receiver. Sure, the first stage has the dominant
effect, but *every* stage makes a contribution to the final SNR. For
an extremely marginal signal such as we've been discussing, even the
fractional db contribution of the audio amplifier may matter.

From: bvolden@ionet.net
Message-ID: <4g2kdt$2vt@ionews.ionet.net>
Source record: 230549

I almost forgot. The Koch method claims you don't want to memorize the individual letters, but just learn by doing to get maximum speed in the shortest time. It sounds good, but I wondered if there is any truth to this. I'm thinking of becoming a ham and wanted to learn code. Now I'm confused on how to go about it. Thanks

Brent

2425. What's the best way to learn Morse code?

It would seem that Canadian amateurs would not share this sentiment regarding this restriction. During there proposal stage, where amateurs were asked for their opinions on this facet of the proposed structure, there was no discernable objection to implementing this proposal. Since impliemention (September 1992) there have been no discernable objections either. This would tend to confirm the government's position in its discussion paper to restructure the amateur service that indeed, home-building of transmitters and amplifiers plays a minor role in the operation of an amateur station by Canadians. This being the case, the government introduced a system whereby individuals could operate modern amateur radio equipment without getting into the intricacies of home construction and the theory that it entails. This is the objective of the Basic Qualification to the Amateur Operator's Certificate. Yet, individuals who hold only this qualification, are permitted to home build/ home brew their antennae, tuners, recievers and any peripheral equipment to the station. If however amateurs wish to home build their transmitters or amplifiers or both, they will be permitted to do so upon successfully passing the examination for the Advanced Qualification.

It seems to be working because there does not seem to be any criticism at all from the amateur community to the government with respect to this structure. Otherwise, I would think that the national amateur radio society, the Radio Amateurs of/de Canada (RAC), would be lobbying for changes.

Yes I would agree there is a lot of "ur 59(9) send me my card" activity on HF. However there is considerable goodwill created by the HFers/DXers of the world in many respects. DX Clubs throughout the world are well known as one of the first points of contact when visiting outside of ones own country. Local Hams will arrange for housing, hosting, and arranging tours and assisting the visitors in many ways.

On the repeaters, I have heard hundreds of Hams with non-USA callsigns sign in to the repeater and immediately have several people offer a warm greeting and any assistance that the visitor may need including housing!

The number of friendships formed over the air are countless. For example I know of a friendship formed over 10 meters between a Minister on Pitcairn Island and a Professor at UCI in California. Together they are working on a history of Pitcairn Island project and after 5 years of on the air friendship will meet this spring for the first time. One has only to listen to 20M during good propagation to be amazed at how many worldwide Hams know each other -- some for many many years.

Any way just a different perspective. === Ask the DX Community.

Another perspective on HF Ham Radio -- I'll bet not a single week passes that I can't hear hams internationally exchanging technical information as a matter of mutual assistance. Not a week passes that I can't hear one ham asking another about visiting their respective countries usually with an invite to meet. Not a week passes that you can't hear important traffic being passed from one country to another --- ask the missionaries and the marine nets.Yes International Goodwill is Alive and Well --- just listen!

>I'm sure this question gets asked alot, but I was wondering where I
>should go to get info on obtaining an amateur license.

We should have a FAQ on this...

1) Call the American Radio Relay League in Newington CT, 203-666-1541.
They will have some sort of poop and a list of ham clubs local
to you. They will also have their www address (which seems to have changed) etc

2) Go find a local club to your liking. This is to give you
moral support (in case you don't like operating in a vacuum)
and you will be able to do things with them that you can't do
by yourself (because no-one has _all_ the equipment ever).
Clubs have different orientations from service, running repeaters,
contesting, HF, VHF. Some clubs are just social groups for
hams to chew the fat.

3) Get a license. This involves passing an (or several) exam(s).
The exams now are all conducted by ham radio clubs (goto #2 above)
There are 3 parts, regulations, which just have to be learnt by
heart; operating procedures (good manners on the air); and theory
which is pretty much vestigial nowadays. You'll need some study
materials,and most of the stuff available is appallingly bad.
The main one used is "Now you're talking" by the ARRL, an introductory
book which attempts to teach you what you need for the lower two
licenses without using equations, physics, or linear thinking.

4) in the meantime look at http://user.itl.net/~equinox/ for
a ham page which will start you looking on the net.

All the best.

Hello:

It never fails, you keep a magazine for years and one day decide you should toss it out. Within seconds of the garbage man taking it away, you NEED an article from it!!!

I'm looking for an article on building a handheld D.F. antenna with a small doppler circuit on the handle. This particular one looked like a bow tie antenna on a short handle with a 9vdc battery and PCB doppler circuit attached. I can't remeber which mag it was in, but it was a few years old.

If you have the article or a similar circuit, can you PLEASE contact me and I'll pay for costs to get a copy.

If you wish, you could fax it to me, call my voice phone number and I'll arrange for the fax to be collect.

Hi,
I am going to be taking my Tech tests on Saturday (2/17) and am now starting to look in to what type of radios to get. I plan to put a 2M Mobile in my truck and get a more substantial base for home.

For home I'm looking into Base Multiband / Multimode Transceivers and trying to decide what will be my best bet. I was thinking of one that would cover at least 2M and perhaps 70cm. I am interested in working into Satellite and EME as well as FM and perhaps some local CW, 12V operation would be a plus but not a major requirement. I do plan on upgrading to at least General with in the next year and expanding also into some HF as well. So I would want to take that into consideration as well. possibly using Transverters get to the higher freqs for satellite and EME and going with a more basic UHF/VHF base unit.

For the mobile unit I was thinking of a rather simple 2M unit for repeater and simplex FM. I live in a rather remote area in the western foothills of the Cascades so I think one of the higher output power units would be in order. I was considering picking up one of the new Radio Shack units. As far as I can tell it has most everything I am looking for at a reasonable price. >From the cross talk I have seen on the net and the write up in CQ (VHF) it seems to be a good choice.

I would like to take advantage of the wealth of experience of those out here on the net and get some input from you as to what you think. Suggestions on equipment to get or avoid as well as things to look for or useless features to not even consider. For me price, value and reliability are important, I have a modest but hopefully adequate amount set aside for starting up and want to use it wisely. To all radio amateurs

SB PROP ARL ARLP007
ARLP007 Propagation de KT7H

It may be hard to believe, but solar activity has edged even lower. There have been no visible sunspots since the beginning of the month, and the sunspot number was zero every day last week. Solar flux was at or below 70 each day also. We should expect more periods of no sunspots as the current cycle bottoms out over the next year.

Unfortunately the geomagnetic field has been acting up a little. The worst period was around 0900Z on February 13 when the K index was five. 160 and 80 meters are really best when the solar flux is low, but an active geomagnetic field can disturb the low bands greatly.

For the DX contest this weekend, a recurring coronal hole could bring more geomagnetic disturbances. The solar flux should also edge above 70. The flux should peak at or just below the mid-seventies from February 25 through the first of March. No big geomagnetic upsets are foreseen.

Sunspot Numbers for February 8 through 14 were 0, 0, 0, 0, 0, 0 and 0, with a mean of 0. 10.7 cm flux was 67.5, 70, 69.8, 70, 69.1, 68.7 and 68.9, with a mean of 69.1.

Sounds like you want a phase-detector circuit, not a Doppler system.
A Doppler system relies on the apparent motion of an antenna in a
circular pattern to obtain the necessary directional information, and
less than three antennas will not induce the Doppler effect with the necessary
two-dimensional orientation required.

My suggestion is to try to get the book on DF'ing by Moell and Curlee.
Excellent book on DFing and a number of projects you can build. Your
local ham radio store should have it--otherwise, you can mail order it
from any source who sells a fair assortment of radio-related books.

2442. Grading Scale for H.R. Equipment

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-16 00:00:00 UTC
From: kb7et@usa.pipeline.com
Message-ID: <4g0hfn$881@news1.usa.pipeline.com>
Source record: 230689

Ever interested in an advertisement for ham equipment
and wished you knew a little more about its condition
before buying? Wish there was a uniform scale for
grading?

Does anyone know of an existing grading scale for
used amateur radio equipment to be sold/bought? If
not, then I'd like to propose the following:

```
Rating Description
-------------------------------------------------------------------------------
10 (N.I.B.) New in the box - free of blemish, complete
with original box, paperwork, accessories
9-10 (pristine) Pristine condition, perfectly functional,
all paperwork, free of blemish
8-9 (excellent) Excellent condition, perfectly functional,
very minor cosmetic blemishes
7-8 (very good) Very good condition, perfectly functional,
minor cosmetic blemishes
6-7 (good) Good condition, functional, some
cosmetic blemishes that do not detract
from operation
5-6 (fair) Fair condition, functional or readily made
functional, significant blemishes that may
interfere with operation
<5 (poor) Poor condition, not functional,
refurbishment requirements unknown
-------------------------------------------------------------------------------
```

Any comments or suggestions?

Hello Paul:

I have had good success with passing the ignition cables through some Snap-On Chokes. However, you will have to use a large number of them because, if your vehicle is like my Ford Ranger, there is not enough slack in the ignition cables to loop them through (I really wouldn't care to try it anyways).

I wish you luck

73 and live better digitally

>Do the clouds which comprise ionospheric sporadic E, have any known
>bi-refringent properties or soesuch, which would allow signals to reach
>the above-lying F layer, through polarization diversity? Or by any other
>trick?

Definitely. Of course all such propagation is refraction, and so near
the edges of an E cloud the electron density is low enough to fail to
refract the signal back to Earth. That signal will then go on to reach
the F layer, where it will pass through into outer space since it is
above the critical frequency for the F layer (else we wouldn't bother
with sporadic E propagation, we'd use F layer propagation from the start).

Burt, I've only been on the Internet for a couple of days now, but I have to say that a quick review of your recent articles reveals a distiinct lack of etiquette. Why are you so darned bitter? Did you lose your job or your wife or something? I think there is nothing wrong with you that a weekend of contesting or maybe helping out a neighbor to install some radio equipment wouldn't cure. Hell, you're as bitter as Pat Buchanan! Maybe you oughta run for President. Then again, maybe you oughta just go to church and get an attitude adjustment.

God bless you, Burt; you certainly need it!

2448. Where can I find Info. on grounding

separate the two pieces -- there's what you need to know to get the license.
and there's what you need to know to operate/build/etc.

the guides available address the first question. you generally find the answer to
the second question by listening on the air, reading the mags, attending club
meetings, taking part in operating activities and so on.

call the arrl at 800-3-2-new-ham...that should get you a list of clubs and classes
in your area.

did you calibrate the SM program to your computer? sounds like weighting and timing are off. there's the PARIS test in the program that will tell you if the program sending at rated speed. there's also a weighting adjustment - should be 3:1 for starting out (dahs should be 3x a dit.)

running other programs at the same time can also cause the programs to stumble around..

I bonded my entire vehicle a few years back. The interference from ignition dropped from S-9 to S-2. Follow thw suggestions in the Radio Amateurs Handbook for mobile installiations. Most police vehicles use the same type of body panel bonding where all of the panels are connected with braid. it does work quite well. Also you might want to install some 0.01 uf disc ceramic caps across the heater motor leads and wiper motor leads. This helped quiet them down too.

Gary

Hi,
First I would be sure to get a unit that does both UHF/VHF. There are now more UHF repeaters in some states (Texas for instance) than VHF! The Yaesu 5100 is a good choice as are some of the kenwood, icom, and alinco models. I like the one that allow for 2 V's or 2 U's as well as a V and a U at same time.. so look for that.

For satellite work you need All mode rigs (CW/SSB).. they are considerably more expensive than the FM variety. You can use transverters from an HF rig, but you will lose features like auto doppler shift correction etc. AND if you want to work some of the satellites that have UHF/VHF/HF capabilities it becomes difficult with the transverters in line.. but not impossible.

Get a good FM Dual bander... learn about the hobby from a local club, see if others are into satellites and find out what works for them. Grab the general/advanced and then have fun!!

73 hope this helped a bit.. perhaps others will comment.

If you want to join our listserver (we are in Houston TX) you may do so and post your question out there... to subscribe

These items are not within the charter for rec.antiques.radio+phono.
Indeed, they're not appropriate for rec.antiques.marketplace either. I
have set followups to rec.radio.swap, although I'm not sure those folks
want to know about stuff like this. It appears you are in the LA area.
If there is any market for this stuff, use la.forsale.

FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 FEBRUARY AND FORECAST FOR 18 FEBRUARY - 20 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 16 Feb
Daily Proton Fluence >1 MeV: 4.7E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.9E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Feb 19 Feb 20 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Feb: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 16 Feb
Learmonth 7 3212 2122
Fredericksburg 10 9
Planetary 9 8

Observed Kp for 16 Feb: 2222 2323

2B. MAGNETIC FORECAST
Date Ap Conditions
18 Feb 5 Quiet
19 Feb 5 Quiet
20 Feb 5 Quiet
COMMENT: Quiet conditions expected next three days.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
17 Feb Normal Fair-normal Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
18 Feb Normal Normal Normal
19 Feb Normal Normal Normal
20 Feb Normal Normal Normal
COMMENT: Good HF conditions expected next three days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
17 Feb 10

Observed Australian Regional MUFs:
Darwin: near predicted monthly values
Townsville: near predicted monthly values
Sydney: 15% depressed early in UT day then near predicted
monthly values.
Hobart: 15-20% depressed early in UT day then near predicted
monthly values. Blanketing sporadic E 10-13UT.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
18 Feb 10 near predicted monthly values
19 Feb 10 near predicted monthly values
20 Feb 10 near predicted monthly values

Best thing to do is call your local electronics parts stores or even CB shops to get the name of some local hams. They probably have formed a club which is the very best way to learn about Ham Radio. You can see anstation in operation and have the whole process explained to you first hand. If you want to give me your address,

There is a web page that I'll get the address for you where you can look up hams in your area by searching by city, etc. Good Luck.

That's a good book, isn't it. You're right, you can experience it
first hand with ham radio. Good luck!

The Radio Shack mobile is Ok, but wait for it to go on sale. There are
many other 2 meter radios that will also fit your needs. The used market
will offer you the best value. For example, the IC-28H was one of the first
"high power" compact 2 meter mobile rigs, and it is available used at
attractive prices. However, you might want to think twice about other
miniature mobile rigs if you need high power. While the IC-28H had adequate
heatsinking for extended high power operation, many of the other rigs do not.
An alternative is a lower power radio and a brick amplifier. You can find
tons of 10 watt class 2 meter radios on the used market cheap, and a brick
isn't too expensive. That can give you 160 watts.

You've also got to consider environmental factors. If temperature
extremes and rough off-road driving are factors, you need a radio

that will hold up under those conditions. Yaesu has some "milspec" radios that might meet the need. They're a bit larger than the current crop of tiny radios, but still small enough to be practical for mounting in a truck.

Also, don't forget a high performance, and rugged, antenna. Antenna gain works both ways, transmit and receive, so it is more valuable than just a high output radio. A NMO mounted Larsen 5/8ths wave antenna may be just the thing to put on top of the truck. If you travel into the outback regularly, a collapsable yagi and a push up pole might ride in the truck for those times when a bit more gain and height would make the difference (obviously for use when you're stopped). Good coax is a must, don't throw away your power in cheap coax.

For the base rig, your choices are quite a bit more limited. For a 2 meter only multimode, the IC-275H is the unquestioned champ. But for satellite, the tried and true FT-736R 2m/70cm *duplex* radio remains the favorite of satellite operators. Beware of the Kenwood TS-790A, it has problems for satellite use, and a bad thermal design and poor user interface to boot. The IC-820H is a bit quirky for satellite use, and the IC-970 is too expensive for your budget.

An option for the soon to be General is the new IC-706. It is both HF and 2 meters. That still leaves you looking for 70 cm equipment for satellite operation, however. And while the radio is nice (very nice), it isn't completely top of the line in terms of raw receiver performance. If you're thinking of HF mobile, however, and need a radio to do dual duty, it is a very attractive and cost effective option. It is 100 watts on HF and 6 meters, and 10 watts on 2 meters. So use of a brick to bring the 2 meter side up to 160 watts would make a potent mobile or base combination for HF through 2 meters all mode. (If I could have only one radio, I think this would be it.)

HF only radios and transverters are an option, but beware, there are several potential gotchas here. First, the number of suitable transverters is limited, and the number of HF rigs that work well with transverters is limited too. The SSB Electronics transverters are about the only commercial choice. They're very good, but also expensive. Second, you need to listen at the same time that you transmit for satellite operation, and that means two transverters and *two HF radios* because most (if not all) HF radios won't operate full duplex. Of course, one of the HF rigs can be only a receiver, but it needs to be a good one, and there are few of those on the market today.

You could pair a two meter all mode with a HF rig and 70cm transverter. That would work all right for satellite, but now you have 3 boxes to deal with, and a fair hunk of change invested. Or you could use a 70cm all mode, like the excellent

IC-475H, and a 2 meter all mode like the IC-275H (makes a *wonderful* Mode B station), but now you don't have HF, and the pair costs quite a bit more than a FT-736R.

The 2 meter rig *could* be the IC-706, however, paired with an IC-475H for 70cm, and then you'd have HF too. That's an interesting combination.

Again, I'd advise that there are tons of used rigs out there. You *can* find excellent buys on used HF equipment, such as the fine IC-735, and many many choices for FM VHF/UHF rigs. Where things get a bit tight are in the multimode VHF/UHF market and the transverter market. There have been many fewer of those sold, and some aren't very good, so you might have a hard time finding what you need on the used market.

And finally, you can *build*. That's not as popular as it once was, but thanks to high integration parts, and some excellent designs, you can build credible equipment for VHF/UHF FM or SSB, and even for HF. VHF FM rigs are almost trivial to build today, and thanks to Rick Campbell (and the new DDS chips), single band SSB rigs up through 70cm are also a snap. A multiband HF rig could be daunting, however, due to all the required filters and switching.

The real drawback to building is packaging. Making something homebrew look nice and be easy to operate is still not trivial. However, microprocessors can take much of the pain out of the user interface, and Ten-Tec sells some nice cabinets. This probably isn't the right approach for a new ham though. You do need some skills besides being able to solder to successfully build a quality rig from scratch.

You can basically forget kits, most of them offer less performance, and higher cost, than commercially built equipment (especially if bought used) and teach you little other than how to follow directions and solder. Some kits can be used as *subassemblies* however, such as the Kanga kits of Campbell's designs, the Down East Microwave kits, and some of Ten-Tec's kit offerings such as their 6 meter transverter (you can't buy a 6 meter transverter for what Ten-Tec gets for their kit). FAR Circuits also performs a real service by offering boards for popular circuits at low cost. This takes a lot of the pain out of building, though if you use SMD parts, making your own boards isn't hard. Accurately registering all those through holes is what makes PC board fabrication difficult for the home builder.

>being passed from one country to another --- ask the missionaries and the
>marine nets.Yes International Goodwill is Alive and Well --- just listen!

With over 2,000,000 amateurs globally, I'm not surprised you can find
52 examples of helpful international people to people contacts a year,
in fact there are certainly more than that. But that's still a small
fringe fraction of HF activity. I think it's one of the more important
fractions, obviously, but it isn't the dominant activity heard on HF today.
Even among what can arguably be called people to people contacts, most of
them appear to be domestic rather than international (as *old* friends
gather to reassure each other they are still alive day by day and compare
their latest illnesses). Nothing wrong with that, of course, but it doesn't
do much to advance international goodwill and understanding.

And the missionary and marine traffic arguably belongs on commercial
channels to a large extent since it facilitates the day to day business
affairs of the participants, which isn't permissable on amateur radio.
(This has been a bone of contention for a long time.) I too have heard
the (rare) true emergency traffic being handled, but most of it isn't.
It's just the routine of sailing business or missionary business being
handled.

>shortest time. It sounds good, but I wondered if there is any truth to
>this. I'm thinking of becoming a ham and wanted to learn code. Now
>I'm confused on how to go about it. Thanks

It's true, you don't want to learn the dot-dash combinations for the
letters. You want to develop a conditioned reflex response to the
individual letter sounds *as a unit*. In other words, didah must simply
generate the response 'A' and not, "hmmm, dot dash, lets see that's 'A'".
Such a mental lookup table will prevent you from achieving higher speeds.
To becomes successful copying Morse, you must bypass the conscious mind.
The most important thing about copying Morse is to continually remind
yourself, "Don't think!". (Depressing but true, Morse is the non-thinking
man's signaling method. You must become like Pavlov's dog, disengage the
rational mind that separates you from the animals and just respond
to the stimulus by conditioned reflex.) Eventually, if you're fortunate
in the way your mind works, you'll develop the ability to multitask and
can think about something else while unconsciously copying Morse.

>remotely approaching a large percentage of the available spectrum.

Hmmm, my dictionary says a "hobby" is a small European falcon with long wings. So much for dictionaries. Lets see what the government says amateur radio is. It says (in CCA'34 as amended) it's a radio service created to serve a set of stated purposes *in the national interest*, spelled out in Part 97.1. None of those purposes mention small European falcons.

The several hundred megahertz of spectrum available to amateurs has been conservatively estimated to be worth a billion dollars a megahertz to industry (some megahertz obviously being worth more than others). That's a major hunk of change we're sitting

on, and very hard to justify for just recreation.

>>Consequently, the structure we use to license new hams also needs to evolve.

>:for commercially available services of equal or better utility.
>
>If you reread FCC 97.1 these people looking for reliable local
>communication more than meet the basis and purpose of Amateur radio.
>I suggest it is your interpretation that is skewed.

I suggest you read 97.113(5). And I also challenge you to show anything
in 97.1 that says amateur spectrum is to be used solely as a substitute
for commercially available communications services. In fact such usage
is forbidden. Amateur radio has four clearly chartered purposes, and
none of them are to serve as a cellular telephone substitute. Nor are
any of them to be a small European falcon. Amateur radio exists solely
because its charter goals serve the public and national interest. Nothing
else. It wasn't created to be a passtime. It doesn't exist to be your
hobby. It exists because its value to the nation is perceived to be
greater than the value of the spectrum it occupies. When that ceases
to be the case, amateur radio will cease as well.

If you want to be an amateur to take advantage of the learning laboratory
its spectrum represents, if you want to become an amateur to provide service
to your community, if you want to become an amateur to sharpen your skills
as a communicator, or if you want to become an amateur to further the people
to people international contact that can lead to greater understanding
between nations, then you're meeting the charter purposes of the amateur
service. If you just want a hobby, take up stamp collecting, because you
won't be contributing to the service, furthering its purposes, or helping
to preserve its existence by your presence.

2478. This Week in Amateur Radio #151 (for air through 2/23/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-17 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5lFKKAq.sanderman@delphi.com>
Source record: 230585

Here is a summary of news items covered on edition #151 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 23-Feb:
-
1. ARRL Petitions FCC to Codify a Tougher PRB-1 in Part 97
2. Canadian Amateurs Spared Increase in 1996 License Renewal Fees
3. Commission May Again Delay Opening of Vanity Call Sign Program
4. Two New Computer Viruses Discovered, Targeted "Windows95"
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. "The RAIN Dial-up" from Chicago
7. DX Dinner Scheduled for 1996 Dayton Hamvention
8. Government "HAARP" Tests, Part II of a Special Report
9. Upcoming Special Event Stations with George Bowen, N2LQS
10. RAC Announces Several Administrative Appointments
11. Radio Canada International to Stay On the Air, Avoiding Cuts
12. Chinese Rocket Carrying Intelsat 708 Explodes During Launch
13. "Amateur Radio Newsline" - Edition #966 from Los Angeles
14. Weekly Propagation Forecast
15. Bullhorns Installed in Denver Airport Subway as PA System
-
Funding for the program's transmission and production expenses was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace
North Dakota, who carries "This Week in Amateur Radio" on the WA0ZOK
repeater on 443.75 MHz, serving Fargo, North Dakota, Morehead,
Minnesota, and the Red River Valley.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Satellite space and uplink services are provided by Skyvision,
Incorporated as a service to the amateur radio community. Further
information is available from George Bowen, N2LQS, at 518/283-3665
(e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-

6809 (e-mail sanderman@delphi.com). You may also reach them @
WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Hi Dennis

You might pick up a copy of QST and look at the ARRL publications listed in the back of the magazine. There are six pages of publications there including video courses on Ham radio. For a very comprehensive manual--go to ur nearest Ham Radio Store and look at The ARRL Handbook for Radio Amateurs.

Good Luck
See (hear) you on the air I hope
Rod

Hi David,

You might want to look at my DXtreme Amateur Radio Station Log
System V2.0. It runs in DOS on a 386DX or better machine with a
VGA or better monitor.

Designed for HF DXers, DXtreme lets you enter your
contacts and track the DXCC performance of your station. It
features attractive, easy-to-use screens, and a full range of
inquiries and reports.

A Demo version of DXtreme is available, free over the Internet or
for a nominal charge via regular mail. To obtain the Internet Demo
version of DXtreme, access the DXtreme Home Page, at:

http://www.geocities.com/TimesSquare/1702/

If you decide to order, feel free to take $10 off the price, which makes
it available for $19.95.

Thanks and 73,

Bob Raymond, NE1I

Ham radio is just a slice of society. Sure there are inane conversations (in the ear of the listener huh) going on. However TV, Radio, Newspapers, Movies and Books are "guilty" of this also. Same at parties, bars and where ever you go. Why would one expect Ham Radio to be any different ?? With TV, Movies etc we selectively choose what is "interesting" to ourselves and ignore the rest. Keep in mind that what you find "worthwhile" is not what others would agree with. Ever surf the TV channels and just give up and shut the durn thing off?

Fortunatly, we are no longer crystal-controlled, we can tune around until we find that "interesting QSO of substance" or shut er down! I for one find many many interesting conversations on all the Ham Bands. AND I don't stop and listen, whine and complain when two Hams aren't doing what I THINK they should be doing.

As for contesters on the weekend -- join em or go to 30M, 17M or 12M (Papa don't loaw no contesters there) or go mow the lawn.

As for DXers -- what better way to utilize available space ? 200 DXers on a single pileup or net frequency is better than 200 spread out on the band calling CQ DX (which all to many do I concede).

Maybe --Love it or leave it

HAM RADIO IS!

A different perspective

Source record: 230592

There are really two software packages that I use and find very fantastic.

KENTROL is a really great transceiver controlling software package that currently does not have logging but will presently. Get it at brian@synapse.net.

LOGICW is my other favorite that has both routine logging for awards and very sophisticated contest logging software. If connected to various transceivers thru computer port you don't even have to enter the start or end time of QSO, frequency, mode, ect. It even has a CD-ROM interface for only $48 that automatically looks up the callsign and enter the contacts name, address, etc. subsequently automatically printing QSL cards. Really to much to mention here. Get if from pda@hosenose.com.

Both packages are WINDOWS platform and as I have used them for uit a while with the LOGICW being my favorite because Ihave KENWOOD TS-940S & TS-440S that are included in their hardware driver lists. Most modern equipment with eomputer interfaces are supported though. Once you use the coputer controlled transceiver you will wonder how you ever got along without it even for just routine everyday non-contest logging.

Paulc,
You did not mention the age or type of vehicle. These are important factors since different models manifest there noise in different ways. One of the biggest problems in vehicles and boats are the alternators. A good preventitive maintenance item is to take your vehicle to an electrical shop and have them rebuild it. If that doesn't work then you might need an alternator filter. The marine types work best don't waste your money on the radio shack units. Install the filter as close to the output of the alternator as possible. The caps across all small motors and the bonding of body panels works good too.

To: All repeater owners on the East Coast
From: Jeff Hilliard WA6IOK
Ref: East - West repeater linkup on Fridays

Since our repeater group recently subscribed to the Sprint "Fridays are free" we are linking to other repeaters across the country on Friday afternoons during the West coast commute.

If you have a reverse patch on your system and wish to participate in this fun stuff we rarely get to do, let me know the information below. Here's the plan...

On Friday afternoons at 5:00PM Pacific Time, we will place a phone call from our repeater in Granite Bay, CA to any other repeater in the country or, in another country. All we need is your reverse patch telephone number and an agreed upon time and date. The phone call is on us! Are plan is to link for 1/2 hour to one hour each Friday afternoon.

If you are a control operator and have an interest in this concept, please Email me at the following address. Be sure to include;

Your callsign
The repeater call
The reverse patch area code and phone number
The approximate number of users that will participate
The date you wish to start. (We will be beginning this coming Friday)
Your return Email address

I will send a return Email as a confirmation. Let's give it a try!
We have from 5 to 20 users on any given commute here on the West Coast using our frequency.

Thanks for your interest in this project. I look forward to a great time.

Best Wishes and 73,

Jeff Hilliard WA6IOK
Granite Bay, California

Listen to a new world technologist's attitude that's shared by most:

I'm an electronics engineer, a member of the IEEE, and a computer
network architect. I like radio and analog electronics as a hobby.
I use the 2M band on a regular basis and that includes auto patch
and repeater services. I do not have ANY KIND of FCC license although
I might get one if I have the time to waste. One thing is for
sure:
I WILL NEVER TAKE A TEST ON MORSE CODE!!!!!!!!!!

What kind of a BONEHEAD is so obsessed with HISTORY that they seek
to make modern electronics professionals and hobbyists learn the
trade of the old telegraph operators of the 1800's? In terms of
electronics knowledge I have regularly WAXED every "amatuer"
radio operator that I have ever met and all they can do is try to
hold this childs toy morse code thing over my head. Gimme a
break man!!! That CRAP IS DEAD!!!!! It serves NO PURPOSE!!!!!
Don't even try and argue with that - YOU WILL GET WAXED TOO!!!!
Let's face it, in the 1990's it's outdated to even use HF for voice.
This is the age of DATA COMMUNICATIONS. I would like to invite
all really fast morse code guys to come over and try to beat the
speed of my terminal adapter at 9600 baud. And for those who
want to say things like "but what if, in a really bad disaster,
you didn't have your TA?" Do I even need to get involved in
such a pathetic arguement? NO!!
Now, to change the subject a bit, I don't ever want to be called
an "amatuer radio operator" - what a pathetic label. I got my
general class professional ticket while I was in the Navy, so how
am I supposed to be called an "amatuer" - really weak label. And
as for being called a "Ham Operator", I'll never be a HAM.
I've been extremely successful as a designer of TCP/IP networks
and recently became a Cisco Certified Internetwork Engineer to
boot, so, maybe with all that extra cash I'll pick up an HF radio
for home and another for the car, hook up some TA's and have
a roving data terminal, NATIONWIDE!!!!! One thing that will never stop

me is MORSE CODE!!!!!!!

C. McCane

Well, until the requirements are changed and the United States is on the
exception list of the ITU treaty, the morse code will be required..at least
for HF.

Yes, CW may not used by as much as it was (so what), it is still a
requirement. Therefore the purpose the CW requirement serves is that it
allows the U.S. to complete the ITU treaty. If you have a problem with
that...take it up with the State Department.

>Now, to change the subject a bit, I don't ever want to be called

OK, so what are you doing on 2 meters? Why would you want an HF radio
(unless it is just to listen)?

: WA7ROI

Nope ..... this all changed in the mid-80s. Used to be that the Tokyo International Amateur Radio Association would help foreigners to form "clubs" comprised of "at least 51% JA nationals" ... meaning three man clubs. ;-) So, lots of foreigners wound up with "club calls". Since mid-80s, you apply directly (actually thru JARL) for BOTH station and operator licenses. The fee is a bit steep and the license is only good for one year (unless you are a "permanent resident" of Japan).

The license info is available on the World Wide Web. I'll provide more details if anybody is really interested.

>"into" communications?

Yes, Newington DOES have to be on each one. All of the lines
have a purpose.

The ARRL Headquarters and Newington CT lines are only redundant
if you are a person who would know the source from personal
experience. Not everyone has seen the bulletins many times
before.

These bulletins are essentially a press release, and in fact
are used as such quite often. Most traditional press releases
are transmitted on letterhead. Since ARRL's are transmitted
on the Internet and via radio, that information must be
included, even if only briefly. When these bulletins are given
to newspapers as a press release, as some of the bulletins are,
the source attribution is REQUIRED before the newspaper will
print the release.

Many of the ARRL bulletins are picked off of the Internet and
distributed by other means, such as RTTY and Packet. The other
cryptic lines serve as Bulletin IDs and RTTY synchronizers (NNNN).
The ARRL has provided these lines so someone may take the
bulletin intact and transmit it without having to generate
this information manually, and possibly erroneously.

In short, the ARRL has provided a bulletin format which is
compatible with the Internet, Packet Radio, RTTY and press
releases without end-user intervention.

Having a Dutch license I may be able to help you ;-).
If you need more info send me mail _this week_ as I'll be unreachable
for some time after that. Anyway, here goes:

*** it would be useful for someone (ARRL?) to collect this info and
*** make it available on the net for countries around the world.

1. License
You need a reciprocal license. If your country supports CEPT, then you
are home-free as that's enough. If you don't, then you should apply
for a license. I would get in touch with:
HDTP/RDR
Postbus 450
9700 AL Groningen
Phone: +31 50 5222111
FAX: +31 50 3135645
I suggest calling them first. Keep in mind that we're at GMT+1 or GMT+2,
so calling early in the morning is probably best. Calling in English
is OK; in case of doubt use the word 'radiozendamateur'.
Prepare well in advance; I think that 3 months in advance is a good idea.
I must confess that while I have very nice experiences with USA and
Canadian guest licenses, the Dutch license may not be free, sorry :-(
In case of problems mail me and I'll make a call to them for you.
(my news system is busted up so send mail to GeertJan.deGroot@ripe.net
instead of the address above)

Note that 3rd party traffic is NOT ALLOWED HERE.

2. 2 meter band
- The 2m band is from 144.0 - 146.0, NOT to 148.0.
Be careful as transmitting out of band is a crime.
(watch your memories in your HT!)

- Stay out of 144.825-145.0 and 145.800-146.0 as these are beacons/sats respectively
- Repeaters can be found on 145.600 - 145.800, with 12.5 KHz raster. The inputs are 600 KHz lower. All repeaters are open; you will only find one per region.
Some repeaters only need a carrier, some need a 1750Hz tone which you need to send before your first transmission to open the repeater; if your HT doesn't have that, consider building something with a 448 KHz resonator and a 4060 divider (448/256=1750 HZ).
Keep in mind that unfortunately the repeaters are sometimes affected by 'changes in acceptable social behaviour'; if you hear abuse, please ignore it and keep in mind that I'm emberassed because of this.
- Simplex calling frequency is 145.500. Working frequencies are 145.225-145.575 except 145.300 (RTTY) with 25 KHz raster, sometimes 12.5 KHz. You may find some activity on 144.700-144.800 too.
- Packet is on 144.675, 144,650, 144,625 (in that order).
- Stay out below roughly 144.500 as that's CW and SSB and the like.

3. 70 cm band
- The 70 cm band is from 430.0 - 440.0, so WATCH OUT. This is DIFFERENT in other European countries so watch out.
The bandplan is really complex, so I'll only make some highlights here:
- Repeaters can be found on 430.0-430.375, 12.5 KHz raster. Inputs are 1.6MHz higher. Access is usually carrier-operated or 1750 Hz; we don't have many PL-only repeaters yet.
- Simplex calling frequency is on 433.500; working frequencies are around that.

Have fun,

73, Geert Jan PE1HZG

Eugene Kang <wired@genes.pl.my> writes:

>Is the Standard C108/158 modable? How much do they cost in
>London?

You need to ask. Standard also makes J-mark radios which you can't mod;
this is not easy to see so ask before you buy.

Standard isn't sold much in Europe; their marketing strategies suck IMHO.
The other four have much more market share. Looking at the advertizements
in RadCom, I think you may find that London prices are expensive.

What I would do is buy one on the USA. If you are looking for an 108,
consider the 508 instead.

HRO is very friendly to remote sales; ask for Barry Onigman
<barryo@tiac.net>; he helped me several times in the past.

Hyperlog Pro is the next version due out. I have heard rumors of 1-2 months
yet. Hyperlog is now up to version 3.05. I am still using 3.04 so I do not
know what the change to .5 is. Possibly something to do with the CD callbooks.

Source record: 230435

I am a HAM, working my way up from No Code Tech, and I need a source of
extremely low cost equipment.
Disability income doesn't leave a whole lot, and everyone selling good
used equipment wants almost full retail for it, which I can't afford.
It's a matter of simple economics.
I am not looking for freebies!
What I need is a dual band (2m & 70cm) mobile rig that will crossband
repeat for less than a king's ransom.
It has to have a decent power output and a digital display.
If anyone has one or knows of one, please let me know.
Thanks
Gerry

If you know the longitude and latitude of the road location you can
figure out the grid locator - The ARRL World Grid Locator gives the
description and also a BASIC program for calculation. A good USGS map
may help though the road name may not be there. Also I haven't tried
out any of the US Map programs but they may work...

2518. Release News: FBB v7.00

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-18 00:00:00 UTC
From: andy@g1dil.demon.co.uk
Message-ID: <31278a76.2806827@news.demon.co.uk>
Source record: 230439

Hello SysOps,
18-Feb-96

This bulletin is to advise of the forthcoming "Evaluation Release" of
FBB Mailbox and Server v7.00

The software has been developed over the past 2 years to run under
MicroSoft
Windows and is in the final Beta Test phase at this time.

F6FBB has decided that a preliminary release should be made in order
that
those who wish to contribute can assist with final de-bugging. The
change
of platform has resulted in a complete re-write and so there has been
a
long and arduous de-bugging process already. Indeed the Evaluation
Release
will represent 64 previous Beta Test releases to get to the current
position.

There is still work to do, and so SysOps should not see v7.00 as a
finished
product. That said, I am sure there will be those who will complain of
bugs.
Don't waste time telling everyone, just tell us...

There is no, and will be no documentation with the evaluation release,
as
this has yet to be completed. This will accompany the "Official
Release"
at a later date.

As usual distribution will take place via many and varied methods,
mainly
reliant upon InterNet FTP sites in various locations. Keep a look out
at
ftp.funet.fi in the \pub\ham\packet\bbs\f6fbb area.

Copies will appear quickly at GB7BBS.#28.GBR.EU in the FBBFILES
directory.
Access is avilable 24 hours without password on +44.1746.862531 - this
site
carries more than 15Mb of FBB related material. I will also upload the
distribution archive to the WA6RDH BBS in Dixon, CA on +1.916.678.1535
as

soon as possible.

Meanwhile for those who have no on-line capabilities, you can send a sturdy
mailer containing:-

2 x 1.44Mb HD 3" -Formatted- diskettes
4 x International Reply Coupons (overseas)
1 x Return address label

to me by post at:-

Andy Witts
P.O Box 73
Bridgnorth
Shropshire
WV16 6YY
England

Mailers received with unformatted disks, no return address label or insufficient postage/IRC's will be placed in the trash can outside!

I will turn around these disks at my earliest opportunity.

Best 73 - Andy Witts G1DIL SysOp @ GB7BBS - UK FBB SysOp Support Mailbox

: Trade marks acknowledged where used.

Sender Andy Witts
Owner U.K FBB SysOps Support BBS
E-mail <andy@g1dil.demon.co.uk>

2520. New WWW Amateur Exam Practice Page!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-18 00:00:00 UTC
From: Simon Twigger <simont@post.its.mcw.edu>
Message-ID: <4g8574$ls1@post.its.mcw.edu>
Source record: 230441

Hi there,

Having recently discovered the joys of Perl and CGI on the WWW I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is
now complete and has all five examinations along with figures (including Extra).

The results are displayed question by question and then broken down by subelement so that you
can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the
relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

<A
HREF="http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html">http://www.biochem.mcw.edu/P
ostdocs/Simon/radio/exam.html</A>

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

Thanks,
Simon Twigger, AA9PW/G1SNT

PS: If the page is slow, or not to your liking, try Ham Exam at:
http://w5ac.tamu.edu:80/ham-exam.html

Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NH2G, WA3YVN, KK6EK, N6YRU, KD7H, N7NG, AA8GL, W9KIA, WA0PUJ, Pacific Daily News, DF4RD, DL7IO, VA3AOC, F6AJA, JA3MAS, OH1MA, OH6YF, OH8BQT, ON6QR, G4BUE & DX News Sheet and VK3EW for the following DX information.

9H, MALTA (Gozo and Comino Island). NODXA members and friends Holger/DL7IO, Birgit/DL7IQ, Tom/DL7UTM, Ragnar/DL7URH, Tom/DL2RUM and a few more (not yet confirmed) will be active from May 17-31st. Their activity and location will be on the northwest end of Gozo Island. From there they MAY be active from Comino Island (9H8) to take part in the CQWW WPX CW Contest with an experienced team. They have planned a minimum 2 complete stations and a lot of titanum, aluminum and copper wires. They plan to use a 22 meter high vertical antenna and Holger is preparing log periodic dipole arrays from wires for the low bands. If anyone needs 9H on 160/80/40 meters, this may be your chance to get these band points. They will be active all nights during this time. The callsigns for Birgit and Holger are 9H3TZ and 9H3TY, respectively. The other operators' callsigns are not known yet. The contest callsign will be 9H3TY from Gozo or a 9H8 callsign from Comino Island. QSL via DL7VRO.

CQ5, LIGHTHOUSE OF NAZARE (PORTUGAL). On February 23, 24 and 25th there will be activity from the "Lighthouse of Nazare" for the Portuguese Lighthouse Award (Ref FBL-04). Activity will be on 80-10 meters with operations only SSB. The callsign to be used is CQ5FMX. QSL via CT1FMX, P.O. Box 189 - 2562 Torres Vedras, Portugal, also ok by the bureau.

KH5, PALMYRA ATOLL (Being SOLD!). An article appeared in the Monday, February 12th, "Pacific Daily News" newspaper in Guam, titled "Family selling Palmyra Atoll to New York firm". Excerpts from the article state: "The Fullard-Leo family of Honolulu is selling Palmyra Atoll to the New York investment firm of KVR Inc. The sale price for the atoll located 1,000 miles south of Hawaii was not disclosed. The last listed price, from about four years agao, was $36 million. The sale was said to be for more

than that but under $50 million, "The Honolulu Advertiser" reported Saturday. "The new owner was thinking about using Palmyra for scientific research and hotel development", Peter Savio (listing agent for the sale). The atoll, covers about 6,000 acres of lagoons and land, with about 600 acres of dry land which has never been developed.... Palmyra was bought by the parents of brothers Ainsley, Dubley and Leslie Fullard-Leo in 1922.... (Pacific Daily News staff and wires)

P5, NORTH KOREA (DPRK). The DPRK project group, which is headed by Mr. Chen Ping, BA1HAM, Deputy Secretary General of the CRSA, has been busy maintaining multiple contacts and discussing additional steps required to establish amateur radio in the DPRK and make P51DX QSOs available. This week's tentative trip to the DPRK has been re-scheduled to the second half of April because of a variety of reasons. Among them are that currently there are only sporadic flight connections from Beijing. An exceptionally severe winter is effecting the normal life in the DPRK. The underlying aim of the DPRK project is to establish permanent activity with the large base of radio communications enthuasists that are currently involved in ARDF (Amateur Radio Direction Finding) as well as in class-room morse competitions. (This was an excerpt from a OH2BH/VR2BH press release provided by N7NG. An added bulletin with the whole press release will be sent out to all OPDX subscriber on InterNet.)

PJ7, ST. MAARTEN. Ron/ND5S, his wife Sue/KF5LG, Bil/AA8GL, and his wife Dorothy/KB8ZXO will be on the Dutch side of St. Maartin signing PJ7 from the Sapphire Beach Club from February 25th to March 9th. They will be in the ARRL SSB Contest the first weekend in March. They hope to have a special call sign once they get to the island. QSLs to the home calls. Special cards will be printed for the trip.

QSL CARDS ROUTES, CHANGES AND UPDATES..... Jari, OH2BU/OH7RF, reports that R1MVI and OH2BU/MVI QSL card goes to printer late this week and he expects to have them mailed by the middle of March..... Bob, KK6EK, reports that Dave, WJ2O, a member of the Easter Island XR0Y Dxpedition, has shipped the cards for XR0Z to the QSL manager: Mary Ann Crider WA3HUP, 2485 Lewisberry Rd., York Haven, PA 17370. There were about 2300 QSOs. The cards for XR0Y are being overprinted with the QSO data, and will be shipped to Mary Ann in batches beginning next week. Everyone is most grateful to Dave and to Mary Ann for this big effort, and to John Hilbish, W3UM, for processing your corrections to the logs before they went to the printer. Mary Ann has full authority to resolve any discrepancies in the logs, and she has a supply of blank cards to use in case the over-printed card is in error..... Jean Michel, F6AJA, has received the S79JD QSL cards from the printer. He states direct request will be in the mail as soon.... Gerard, F2VX, has received the old logs from F2CW when he was active as FO0CW/A and FO0CW/M few years ago. Gerard is the new QSL manager for 9U/F6FHI and 9Q5FHI. His address is: Gerard Debelle, 4 Le Haut d'Yvrac, Yvrac, F-33370 Tresse..... Please note that KD7H is no longer the manager for UN7FW. QSLs should now go directly to: Vadim Mikhin, UL. Lenina 47-27, Ekibastuz 638710, Kazakhstan, C.I.S..... The following were active in the ARRL CW Contest this past weekend can be QSLed to:

6Y5XX and WH6X/6Y5 via JE3MAS (only via bureau) or direct to:
Hiroyuki Kozu, c/o J.O.C.V., P.O.Box 8202 C.S.O. Kingston,
Jamaica W.I.
OH0MYF via OH6YF
OI8BQT via OH8BQT
PY0FF via W9VA....

S0, WESTERN SAHARA. Operators Naama/S01A, Arseli/EA2JG, and others EAs and Europeons will be active from here February 20th, as S020R. Activity will be for a week on the usual DX frequencies on CW/SSB. QSL via EA2JG, Arseli Echeguren, Las Vegas 91, 01479 Luyando, (Alava) Spain. NO bureau cards.

SPECIAL EVENT STATION. From March 1st until May 31st, look for VG3CRC, the Canadian Red Cross Headquarters special event station celebrating the 100th anniversary of the Red Cross in Canada. Also, look for other provincial Red Cross stations with special callsigns. Special QSL card via bureau or SAE + IRC to callbook address (VA3CRC). (TNX to Ric Guidone)

TF, ICELAND. Fred/ON6QR, Peter/ON7PC, Jack/ON5OO and Stef/ON1KSZ will take part in the CQWW WPX SSB Contest (March 30-31st) as Multi/Op entry. They expect to use a special callsign during the contest. From March 26th to April 2nd, they will be active from Reykjavik (IOTA EU-021) with the TF/callsign/P. On March 28th, they will transmit mainly in the afternoon from the Westman Islands (IOTA EU-071) with TF7/callsign/P. Look mainly around 14260 kHz and the IOTA frequencies. QSL via home call.

V31, BELIZE. The Cuba Libre Contest Club will be active as V31DX from Ambergris Caye, Belize for the ARRL SSB DX Contest. Operators will be Vic, KI6IM, and John, N6YRU, as a Multi/Single entry in the contest. QSL to AA6BB.

VP2E, ANGUILLA. VP2ES (KC0ZC - Stew), VP2EZ (WA0PUJ - Glenn), VP2E/N0ZSU (Loring), and VP2E/KL7YL (Vivien) will be active February 28th-March 6th. QSL to home calls. VP2E will be the call during the ARRL SSB Contest. QSL to KC0ZC.

VQ9, CHAGOS ISLANDS. Ron, AA5DX, will be active from here for the next 4 months. Ron's call will be VQ9DX or VQ9RM and he will be concentrating on 160, 80 and 40 meters.

XZ, MYANMAR. A Finnish-team will activite this rare one again. The operators will consist of: Jaakko/OH1MA, Pekka/OH1RY, Leena/OH2BE, Martti/OH2BH and Petri/OH2KNB. They will be on the air as XZ1R from February 18-28th. Suggested frequenies:
CW - 1824.5 (QSX 1831), 3504, 7004, 10114, 14004, 18074, 21004, 24894 and 28004 kHz
SSB - 1845, 1845, 3795, 7042/7095, 14195, 18145, 21295, 24945 and 28495 kHz

The team intends to have two stations running with amplifiers. They also plan to make a special effort on the low bands due to the sunspot cycle and pay attention to short-propagation areas of the world such as

the U.S. East coast. During this operation, special attention will be paid to the U.S. on 3504 kHz from 1200 to 1300z as well as 2200 to 2330z. QSX up only. QSL to: SCSDX-team, P.O. Box 111, FIN 24101, SALO, FINLAND Leena, Martti and Petri Laine (who are already there) will be traveling to other parts of Myanmar during this trip before Jaakko and Pekka arrive on Wednesday, 21st of February. Then the team will conduct another training session for three selected Myanma students. ADDED NOTE: This group is also making final preparations for a large American Expedition (XZ1N) now scheduled for the first week of April, 1996.

ZL8RI KERMADEC ISLAND DXPEDITION UPDATE. The DXpedition team of Ken/ZL2HU, Chris/ZL2DX, Ron/ZL2TT, Lee/ZL2AL, Al/WA3YVN and one Japanese operator (to be announced) will be active for eleven days from Kermadec, May 4-14th. The team will depart from New Zealand, April 30th, aboard the Research Vessel "EVOHE". This modern ship has been inspected by the team in New Zealand and meets the highest specifications of reliability, safety, and has some of the best communications, navigation and mechanical system available (charter cost $25,000). The ship has two Zodiacs and two additional safe landing crafts. However, the DX team URGENTLY needs your financial support to raise the remaining $21,000 needed by April. The team states no donation is too small and ALL donations will be used for non-personal expenses. Donations can be sent to: SGI Expeditions - Kermadec Project, P.O. Box 2235, Melbourne, FL 32902-2235. Make checks payable to: SGI DX-pedition for Kermadec Project and include your call sign on the check or envelope. Please contact Al, WA3YVN, at phone: (407) 727-0201 or FAX: (407) 728-8072, if you need further details.

ZL9, AUCKLAND ISLAND. Graham, ZL4MV, is now active as ZL9GD for a seven day operation (weather permitting), possibly ending February 22nd. Graham had only a 24 hours notice to go on this trip, so he took up on the offer. Graham suggests listening for him on SSB on 14260 kHz (+/-) and 7060 kHz (+/-) maybe QSX up for USA. Graham says listen carefully because he will be only running a 100 watts (no linear - no generator - only battery power). He will not be operating "on board a ship" this trip.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 FEBRUARY AND FORECAST FOR 19 FEBRUARY - 21 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 17 Feb
Daily Proton Fluence >1 MeV: 9.0E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.5E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Feb 20 Feb 21 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Feb: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 17 Feb
Learmonth 10 2223 3322
Fredericksburg 5 8
Planetary 6 7

Observed Kp for 17 Feb: 3322 1122

2B. MAGNETIC FORECAST
Date Ap Conditions
19 Feb 8 Quiet to unsettled
20 Feb 6 Quiet
21 Feb 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY

In article Vance Campbell <vcampbell@novell.com> writes:
>
>Morse Code Whining

Yes, the code testing forever people do a lot of that.

>Have we all forgotton that we are bound by international treaty to keep
>a morse code requirement?

No, we haven't forgotten that. What you may have forgotten is that the treaty section requiring Morse testing has been put on the agenda for the next WARC. In fact, *all* amateur regulation has been placed on the agenda of the next WARC, and the US position will be set within the next year. We have only a short time to influence that position.

>If everyone spent as much time studying the code as we all have
>reading everyone's bitching about it, everyone in the newsgroup
>could have at least a general.

Many of us calling for reform of amateur testing *already* have licenses beyond General. We want regulations and testing relevant to the 21st century, not the 19th century. We don't want a "personal radio service". We don't want to "dumb down" the exams. What we want are *relevant* exams. We want exams that are "smartened up" from the current rote manual mechanization of an alphabetic encoding as dominant element. We want exams that reflect (and lead) amateur practices which will carry us into the next century.

Amateur radio and amateur technology have changed dramatically in the last half century, but our regulations and exam structures have not changed properly to reflect those changes. No longer is Morse Code the dominant communications method of amateurs, yet it remains the dominant element in amateur testing. That must change. It is leading amateur radio down a dead end road toward obsolescence.

: cwhiffen@atl.mindspring.com (Clay Whiffen) writes:

: >What tone do you set your receiver to when digging DX out at the ESP
: >level?

In the discussion of this question, neither Clay Whiffen nor Gary
Kaufmann has mentioned that a severely bandwidth limited noise sounds
very much like a tone. This probably accounts for several posters
mentioning a preference for fairly wide bandwidths as compared
with narrow ones. A narrowly band limited noise with a keyed
tone mixed in with it will produce the effect of a large carrier
with weak modulation.

I regret that I have no equipment to make a test of what
my own preference in tone is.

For one thing you need a license before you can "HAM brodcast." And another
you don't broadcast in amateur radio.

Source record: 230511

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line, in our classified search engine, in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

```
I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.
```

2541. QRM from my Shack Computer

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-18 00:00:00 UTC
From: ian@james.powernet.co.uk
Message-ID: <4g725i$11g@power2.powernet.co.uk>
Source record: 230512

I have an IBM clone computer in the shack which I use for Internet and hope to use for radio logging. However, the QRM from the computer doesn't allow me to operate successfully on most bands.

Does anyone know of a simple way of eliminating this interference?

2542. Sneaky suggestions for fox in foxhunt wanted..

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-18 00:00:00 UTC
From: Wally@moor.slip.uky.edu
Message-ID: <614.6622T1404T199@moor.slip.uky.edu>
Source record: 230513

I am going to be the fox in a foxhunt here in Lexington, KY March the 3rd, and I am looking for suggestions on how I can be sneaky and throw my hunters off. They've been waiting the winter (as every time I thought about having a hunt it was nasty or really cold) and I am afraid they're going to track me down in 15 minutes due to being so anxious.. :)

Any suggestions on what I could do to throw them off would be appreciated. I've a couple ideas, but hopefully I can get some better ones and make 'em work to find me. :)

Thanks..

Hello Geoff. Here in San Diego we have a repeater club with over 800 members. Included are at least 10 or more hams who are in your age bracket 10 to 17 years old. They have a "Young Persons Net" once a week and are now planning and designing their own repeater. Several of these young Hams were motivated and licensed as a result of talking to the astronauts while in orbit, this was last year at Fallbrook High School. Three of the young hams are now in ARES learning emergency procedures. Two have upgraded to general and one to advanced.

Really great to see a new group of folks, regardless of age -- join the wonderful world of Amateur Radio.

Please send me your packet address and I will pass it along so as to set up a schedule on HF with our "Young persons Group"

Yo Burt. I figured we would cross paths sooner or later. Hope you don't mind my different perspective to Ham Radio as opposed to yours. I only respond to you so that new comers and non-hams don't get a distorted perspective of Ham radio.

Re: Last "interesting" QSO on Ham Radio -- it was yesterday on 2 Meters. Callsigns KE6WOF, KE6ZLY, KE6BIG, KE6QIQ, K7NA, KM6YS, WA6UTQ and AC6V.

Subject: Airships and Lighter Than Air. We discussed aerodynamics, history of lighter than air, the AKRON, THE MACON, THE HINDENBURGH, use during WWI and WW2,the fact that the MACON carried up to five fighter planes for scouting, and much more. The Germans flew over a million miles in airships without mishap until the HINDENBURGH. There is a great page on WWW devoted to lighter than air.

The scout planes on the MACON left and docked on the big airship while in flight. One of the scout planes from the MACON dropped a newspaper to President Roosevelt on the Houston while far out at sea -- the Pres and the ships company wondered where in the heck did they come from!! Boring HUH ?

One of our QSO group flew in Navy Blimps and had several blimp-submarine stories to tell. Also one of our group saw the MACON in flight -- it was over 700 feet long-- two and a half football fields!!!!! Another of our group flew in the Goodyear Blimp quite an experience.

Did the above interest you?? I didn't think so. Well lets try these --

Other recent QSO's have included a discussion with a professor at UCI (KD6UVN), subject -- Ancient Greece. He is one of the worlds leading authorities.

Another great QSO (several hours in the log on 10M, 15m including ssb, cw and digital) -- VR6ME (Mark Elmos) on Pitcairn (The Bounty of course) and current conditions. Do these interest you ??
Didn't think so.

Two days ago we had a discussion on 2 Meters re -- pressure cooking
Maybe this wud grab your fancy ?? Nope -- well hows the this last one ?

An inane conversation about No Code Techs and the CW requirements -- ah bet this got ur attention. I bowed out of this one ! Boring boring. In my humble opinion --- The no-code Tech license is a great addition to Ham Radio.... (period).

PS the little grainy stuff on the beach is sand not sans.

73 et al
Rod with a different perspective on the wonderful world of Ham Radio.

NO_CODE TECHS I HAVE KNOWN

ART -- designs ATV and antennas and much more from scratch! I mean down to the component! Equips helicopter avionics.
TED - A professor at UCI (no electronic background -- now a general) A worlds leading authority on the Ancient Greeks
BILL - Designed his own cavities for his homebrew 6M repeater (see QST)
JOHN - Former head of a Hewlett-Packard Division (one of the best)
FRANK - A decorated Marine Corp Jet Pilot, now in ARES
PAUL - Vision impaired -- knows more about VHF/UHF than many, now in NTC
JEFF - Drives a truck probably makes more that u and I, knows computers inside and out

Could site many more.

THESE FOLKS HAVE ENHANCED AMATEUR RADIO GREATLY.

Nuff said ??

Rod with a different perspective to the whining going on here.

Can any one supply information on the Mid-Winter "Cabin Fever"
Hamfest located in LaPorte, IN on February 24?
Specifically, I'm looking for direction and a talk-in frequency.
I'm also interested to hear comments about this one. I have the
address for the LaPorte ARC, but there will not be enough time to
get an SASE there and back by the weekend.
Thanks to all.

>For one thing you need a license before you can "HAM brodcast." And another
>you don't broadcast in amateur radio.

Brent,

You will be happy to hear that there are lots of hams out there
who will be forthcoming with good suggestions, and will help you
with your license studies and equipment needs.

You can probably reach a local VHF or UHF repeater from your
apartment with no trouble. There are some neat "stealth" antenna
designs out there, too. If you wish to talk around the world
in the HF ham bands, you may find the apartment more of a problem.
Don't get discouraged until you talk to the locals and find out
what is possible for you. You can find ham radio clubs and
interest groups through your local ham equipment stores, or
through the ARRL.

Getting scolded about the difference between broadcasting and
transmitting is mostly something that happens on the internet,
not on the ham bands.

Good Luck, and 73

John,
try http://www.arrl.org/

The American Radio Relay League is the main umbrella organisation
for hams in the US. Call them in CT (203)-666-1541 and find one
of the local clubs to your liking (different clubs have different
orientations, from techical to public service to just social clubs
for chewing the fat). You can start doing things with them and get
help from them. Pretty soon you'll be doing it with them.

I've looked into this for my TS-520SE. The DC version TS-520S
(or did I reverse the two names?) has an added heatsink on the back
with two switching transistors, wired to a terminal strip in the
rig. The power transformer is different, however. It has an added
winding to serve as a low voltage primary, switched by the transistors.
To convert to 12V DC in you would have to change the transformer
and add the heat sink/transistors on the back.

: i tend to agree.

: this is one area where amateur radio clubs with club stations can help out.
: a group of people set up 1 station where it can be made decent and everyone shares.

One other thing to look into is what bands you want to operate in. I live in
an apartment too, and one without a balcony at that. For the 2m band, the
antenna that I use most consists of a square loop of wire held to the window
with suction cups. It's not the greatest of gain antennas, but being 150 feet
in the air makes up for a lot of shortcomings. The short feedline helps too,
it isn't everybody that can have the shack up at the top of the "tower" :-)

True, HF work is a a bit of a pain from an apartment, but if you're interested
in anything from VHF to microwaves, an apartment may well be better than any
house way down on the ground.

>Have any of you done the math for this and would you be willing to
>share it with me?

To get a sort like the Callbook sort, I set up two fields - one for prefix and one for suffix, and other fields for any other data you might want. Then, when you make a query that you want sorted by callsign, pull both prefox and suffix fields into your query making sure your suffix field is first (in addition to any other data wanted). Sort on the suffix field, then the prefix field, hide then (or not), and you have your list sorted by callsign.

Not quite the answer to your question, but I live in an apartment and operate HF almost every weekend. I installed my rig in my pickup and drive to a nearby park and operate from there. I find the noise level is much lower in parks than apartment complexes and I don't cause TVI. I have worked from JA to 9K2 in the passed 6 months.

Well Burt..you've reached a new high in low's.

It's a shame we have to share you anal retentive views. Now I really know why the operators near you on the Cape consider you
clod and a bore.

Rather than welcome this person and letting him find out on his own what the hobby may offer, we get your stunted views.
I can see why your daughter shares those...the acorn falling from the tree

Archie Bunker and Gloria, etc etc.

Geoff..forget Burt..his is the epitome of which he speaks..he's old, probably fat, definitely lily white (dead things usually
are!!!)

You'll find alot of people to talk to you, and Yes..even a few Burt's. Just remember, everyone is entitled to their opinions.

Just some are more asinine than others. BTW, just for your information, Burt teaches the mentally challenged for a living.
Obviously, they learn better from one of their own

73, enjoy..

Special Event Information
The Center for Amateur Radio Learning "C.A.R.L." will operate a special event station during HamDaze weekend at the Arizona Science Center Mar 23-24. HamDaze will be a showcase of Amateur Radio Technology presented by members of many Phoenix area amateur radio clubs. Testing for the No-Code Technician license will be available Saturday at 10:00 a.m. Visitors to ASC will be making contacts under the supervision of volunteer operators. KC7LUL will be on the air in the phone portion of the novice 10 meter band, and general 15 and 20 meter bands. Hours are Saturday 9-5pm and Sunday 12-5pm. The Arizona Science Center is located at 147 E. Adams. For a certificate send a QSL and 9" x 12" SASE to C.A.R.L. P.O. Box 51048 Phoenix, AZ 85076-1048. For information call 602-561-8405.

Bill, could you post a QSL address? I worked KC4AAA a number of years ago, and did not ever receive a card for the QSO. I remember having a very nice chat with the op on the other end. But I got no QSL, even though I sent an SASE to the address he gave me.

Perhaps you picked the wrong hobby to develop an interest in? Like it or not, CW has been, is, and always will be the essence of amateur radio. BTW, the foundation for the word "amateur" comes from the French word "amore;" that is to have a love for the art (after Clinton B. DeSoto -- 200 Meters and Down).

Get an education, find a hobby you enjoy, and stop spreading your pessimism here.

>Min.

Eric, read Al Bloom's article in Technical Correspondence in the current QST. Grounding has almost no effect on interference in general, other than sometimes (often) making interference problems *worse* instead of better. Shielding, filtering, suppressing, and proper design are what reduce interference. Connections to Earth do little or nothing to help except in certain very limited cases.

Grounding is an electrical safety issue, and a very important one, but it isn't an interference reduction issue except in as much as it *causes* interference through ground loops. About the only exception to that statement is when you are feeding an unbalanced antenna. Then Earth can be called upon to act as a counterpoise. But to be effective, the Earth connection needs to be at the antenna feedpoint, not back at the station (though the two can be the same physical point in some layouts).

One of the best references on grounding is the National Electrical Code. These handbooks can be obtained at any good electrical supply house. Pay particular attention to Articles 250, 800, 810, and 820.

Another usage of the term "ground" is important for interference and interaction reduction *internal* to electrical circuits. That is usage of the term "ground" to refer to the electrical common connection in circuits. For sensitive circuits, particularly at RF, circuit common connections have to be well thought out. This is a part of the design process. Techniques such as single point "grounding" and use of "groundplanes" can reduce *ground loops* internal to the circuitry which could lead to instability. These usages of "ground" have nothing to do with Earth connections. The ARRL Handbook has a (all too brief) treatment of this subject.

In summary, ill thought out "grounds" can be a *source* of interference, but "grounds" are not generally a cure for interference (other than in the sense of correcting ill thought out ground connections to reduce their contribution to circuit interaction).

Actually no, you're confusing cause and effect. The current treaty
requirement, as you note up for reconsideration at the 1999 WARC,
is a reason for *meeting* the current requirement if you want immediate
access to HF, not a reason for *retaining* the requirement into the
indefinite future.

You're a pathetic outlaw, McCane. I for one hope you never are
a licensed amateur operator. And I hope you are caught in your

scofflaw operations. It's one thing to be willing to work to
change licensing requirements to reflect modern technology,
but it is quite another thing to simply break the law. I don't
think you speak for "most" of your so-called "new technologists"
in this respect unless what you really mean is "new outlaws".
Criminal behavior won't achieve positive change. This is not
the civil rights struggle, and you don't strike me as the type
to stand up to be arrested to protest an unjust law. You're just
a petty criminal, out for what you can get.

In article <4g83b1$npl@srvr1.engin.umich.edu> mlamb@sunny.ncmc.cc.mi.us (ML, Michigan, USA) writes:
>I have a 2m rig set up in the kitchen...I want to wire the audio to 4 or 5
>different location, inside and outside my house...I would like to have a cheap
>mic hooked up at each location I have a speaker. Has anybody ever made a
>project like this? Any suggestions?

There are several approaches to this problem. Let me suggest one that, while not the cheapest, is least likely to cause unexpected problems.

First, I'll assume your radio has a healthy audio output (on the order of 2 watts or more). Feed its output to a 8 ohm to 70.7 volt audio distribution transformer. Feed the 70 volt line to all your stations and use a 70 volt to speaker stepdown transformer and *L pad* at each station. This will offer a near constant load on the radio and allow you to adjust volume at each location. This is standard off the shelf public address technology.

If OTOH the radio doesn't have sufficient audio output to drive the line, you will have to use alternate means. One way would be to add an outboard audio amplifier to the radio (RS has PA amps that are setup to drive a 70 volt line). Or you can add small amplifiers at each station to boost the audio level. Or you can arrange a switching matrix that allows the radio to drive only one remote speaker at a time. (This can get complex, but does offer some advantages.)

Now microphone feeds to the radio are the second part of the problem. You really don't want to feed microphone level high impedance unbalanced lines around the house. They will almost surely pickup stray noises such as hum, and possibly pick up stray RF too, leading to feedback problems. What you need is another buss line, this one at line level (+4 dbm) and operating *balanced* at a relatively low impedance (600 ohms). You can use internally preamplified microphones, or install simple microphone preamps at each station for use with ordinary microphones. These preamps should be switched on to and off of the bus via a relay (or solid state analog switch IC) controlled by the local PTT signal. At the radio, a matching transformer and L pad will set the transmit level from the bus.

PTT control is simple, just a wired OR connection to a PTT buss connecting all the remote stations to the radio.

Now this is a simpleminded approach requiring a shielded pair, an unshielded pair, and a PTT line and ground (can be the shield), looped around the house daisy chain fashion among all the remote stations. Adding another remote station is trivial, just add it to the busses anywhere you like.

Now I mentioned a matrix approach above. This can offer some
real advantages, among them allowing the remotes to act as
home intercom stations, but requires a star wiring topology
back to some central wiring closet where the matrix is kept.
The central idea here is that each remote station is an audio
transceiver with preamped microphone audio and a speaker
amplifier. Control consists of a PTT line for *each* remote
location you want to be able to reach. At the matrix, you
have several listen busses, one for each remote and one for
the radio, and several transmit busses, one for each remote
station and the radio. PTT selects which listen buss receives
audio from a given station transmit buss. This is done by
activating a specific relay in the matrix (or better by
activating a particular analog switch IC).

The advantage of the matrix approach should be obvious, but
so should the major drawbacks, lots more control wires to be
run, and expanding the system will require modification of
the matrix.

There's yet a third alternative using carrier current signals
circulated around the house to distribute audio and control
tones to and from the remote stations and the radio. This can
be a bit tricky to get to work well, but requires only a single
coax daisy chained among the remotes.

Another (better) way to do that is to digitize the audio and
control signals and distribute them ethernet fashion around
the house. That makes the remote stations somewhat complex,
but its a very stable system.

In any of the cases listed above, good RFI suppression techniques
should be used, IE bypass capacitors, RF chokes, and the like
should be liberally used to keep the busses "cold" to RF. And
the lines should be operated balanced to avoid common mode hum
pickup in all but the carrier current and digital cases. For
the active stations, power can be phantomed down the cables,
or local power can be used.

Does anyone have or know where I can get software to help me learn code
at 13wpm. Currently a Tech (KC7AXU) and passed my general exam in 12/95
and have less than a year to get it done.
Anything would be appreciated.............Rick

Take a tip from the folks at Motorola. They do it all the time. The unit
at the radio is called a remote adaptor, and the various remotes are just
that, remotes. Change the levels to 600 ohm line, and run everything around
at 0 dBm. (1 miliwatt into 600 ohms). You can use 6 wire phone cords, and
their matching jacks to hook everything together. (Of course Motorola makes
it tricky so they can do all this, and change channels too, with a single
pair.)

Wiliam,

The vehicle I am driving is a Volkswagen Vanagon, 1984 with electronic
ignition and fuel injection. The noise is coming from the ignition
system it is very easy to determinr when each plug fires. I may try
bonding parts of the vehicle although there are not a lot of
unconnected parts. I could try the doors and rear gate .

Thanks alot PaulC

>is the power (DC) connected into the system ?

I've looked into this also for my TS-820. The box that connects
to the TS-820 that allows DC operation only contains a two resistors
and two mega transistors.

The transistors are no longer in production, but the equivalent
is ZN4049, PNP germanium, 60A, 45V, TO-36, NTE28 at the tune
of $45 each. Thats $90 a pair. Not a pretty picture.

I think it would be more feasible to buy a DC to AC converter for
your cigarette lighter plug and drive the TS-820 with 120VAC.

I would be interested in anyones experience doing this.

The following is a QST

The FCC says it needs more money to do its job and support for the
concept of an independent repeater spoc grows. These stories and more
on Newsline report number 965 coming your way right now!

(*****
FCC FUNDS LOW

FCC Chairman Reed Hundt says that telecommunications laws cannot be effectively overhauled and enforced without more money from Congress. Hundt told reporters on January 18th he would ask congress to give the FCC $225,000,000 for fiscal year 1996. This is a 26 percent increase over its current budget.
Congress has provided the FCC with only $165,000,000 for fiscal year 1996. The FCC's 1995 budget was $186,000,000. The current $165,000,000 figure is an 11 percent decrease from last year. Hundt faces an uphill battle in a Republican-controlled Congress that wants to hold down federal spending.

(*****
FCC DENIES KV4FZ LICENSE RENEWAL

The FCC has acted to deny the application of Herbert L. Schoenbohm to renew his Amateur Radio license. Schoenbohm, who holds the call sign KV4FZ had his application to renew designated for public hearing after the FCC received complaints that asked his application be rejected. This, based on a federal court conviction several years ago a charge that he had in his possession a counterfeit telephone access device.
The decision against Schoenbohm was issued on January 26th by FCC Administrative Law Judge Edward Luton. Schoenbohm was given the usual thirty days to file a further appeal before the entire Commission. If they deny his renewal application, Schoenbohm's only option will be to take the matter into the federal courts. Schoenbohm has been heard on the air to say that he will fight to retain his license even if it means going all the way to the Supreme Court.
If he fails to file in the required time period, the order becomes effective fifty days after its date of issue. Until that time, Schoenbohm is free to continue to operate on the air.

(*****
SPOC RESPONSE POSITIVE

Efforts to develop a single point of contact between the nation's amateur repeater coordinators and the FCC appear to be making important progress. A committee of amateurs has released its recommendations on who should serve as the contact point. This has been a very controversial issue, it's one that could ultimately affect the repeaters you use for communication. At the center of the dispute is whether the ARRL should serve as contact liaison between coordinators and the Commission on coordination and interference issues. The controversy grew after an October 1995 meeting between coordinators, League representatives and the FCC. One groups reaction to the committees recommendation is very positive.

The committee's report comes more than 3 months after a heated meeting, one that saw coordinators complaining of a railroad job in favor of making the League the single point of contact. But if what

the committee proposes becomes reality, the League won't have that role. Instead, a council of amateurs would be created and called the National Frequency Coordination Council or NFCC.

"I think this is a good compromise" David Baughn, KX4I

Baughn is Frequency Coordinator for the Alabama Repeater Council. He says the Committee's recommendations are somewhat of a surprise.

"It's a little bit different from what the committee was charged to do, which was to develop a SPOC at the ARRL. However, I think that, that this is a good approach to the situation. The ARRL has said that they really are not interested in actually being the SPOC." Baughn

NFCC would receive start-up money and other support from the League. But the ARRL would not oversee or direct the Council's activities. That arrangement is considered likely to please coordinators who opposed having the League serve as the single point of contact. Coordinators from each state would be able to vote on key issues. The number of votes each state could cast would be based on the size of its amateur population, the more hams a state has, the more votes its coordinators can cast. Another committee recommendation could mean a major change affecting repeaters and other amateur radio systems nationwide.

"As it stands now the bottom line would be that eventually coordination would be required for repeater operation." Baughn

That means it could ultimately be illegal to put an amateur repeater on the air that is not coordinated. Baughn supports the committee on this idea, too. He says current rules making uncoordinated repeaters responsible for fixing interference problems are weak.

"Anybody that's had a repeater that had interference problems or been a frequency coordinator and has dealt with interference problems knows that's just not enough to get these situations straightened out." Baughn

Requiring repeaters to be coordinated would mean changing FCC rules governing the amateur radio service. Baughn says coordinators are currently discussing whether to ask the FCC to hold a rule making proceeding to make that happen.

Frequency coordinators across the country have 60 days to respond to the Committee's suggestions. Depending on what additional action is taken, the Committee could then proceed with plans to incorporate. The Committee's work may signal the beginning of a solution to the entire single point of contact issue. The Alabama delegation initially opposed the single point of contact proposal but later changed its position. And the Southeastern Repeater Association, SERA, which initially went on record opposing the idea has clarified its position. SERA now says it, too, can support a single point of contact if that liaison is made up of the nation's coordinators. The

only question now. Will the ARRL will support and possibly fund an organization over which it will have absolutely no control?

(*****
ARRL vs. AUTO LOCATION

The ARRL says no to limiting the 76-77 GHz band to vehicle radar systems. In comments on an FCC Notice of Proposed Rule Making to temporarily remove hams from the band, the League tells the FCC to maintain existing ham allocations from 75.5 to 81 GHz to spur development of short-range high-speed data links.
Automobile manufacturers differed on the issue of continued Amateur Radio use of the 76-77 GHz band. Ford Motor Company opposes continued use of the band by hams. General Motors says that vehicle radar systems would not be adversely affected by continued amateur use of the band. Japanese automakers don't want to use these frequencies at all. They say they prefer 60-61 GHz for these systems instead.

(*****
FUND ADMINISTRATORS REPORT

If you are one of those stations who gets to hear the closed circuit advisory that precedes the newscast, then you know that Newsline is once again in deep financial trouble. The problem is that there have been few donations of late. Heres a report from our support fund administrator, Andy Jarema, N6TCQ:

This month we heard from the Penntucket Radio Association of Haberville, MA, the Radio Amateur Service Club of Baton Rouge, the Wichita Radio Club and the Santa Clarita Amateur Radio Club in California. Period.
As we move into the new year, keep in mind that the news is daily. Please remember that when you think about the only Amateur news service who brings you that news as it happens.
Remember that the clubs that support us with the club name, repeater call and service area get a mention during the newscast id break.

Andy will be back in about four weeks. Hopefully with far better news.

(*****
SCHOOL CLUB PROVIDE COMMUNICATION DURING BLIZZARD

Yet another story of ham radio bravery in the wake of the Great Blizzard of 1996. As the storm hit New England the weekend of January 6-7, the Bethel Educational Amateur Radio Society of the Bethel, Connecticut Middle School got the call to action from the City Office of Emergency Management. The students operated around the clock to provide backup communication for the town and acting as a net control station for 34 surrounding towns in the greater Fairfield County area.

The club maintained vital communication links with the Area Office of Emergency Management in Bridgeport. They relayed weather information and prepared materials if emergency shelters were

activated.
Using the call sign of their coordinator, Peter Kemp, KZ1Z, the group operated from the local fire department on both HF and VHF. They also have a club station at their school. A dozen students participated in the effort.

(*****
HAMS HELP HEART ATTACK VICTIM

A group of Boy Scouts that included several hams lived up to the Scouts' motto, "Be Prepared". As a result, the victim of a heart attack is alive to talk about his ordeal.
It all happened during a wilderness outing last August. Dave Smith of Saratoga, California and his wife Janet were accompanying their younger son and other scouts on an eight-day backpacking trip into California's Yosemite high country when Dave Smith experienced chest pain one day into the outing. Scoutmaster Paul Wesling, KM6LH, took Smith's vital signs and used ham radio to relay the information to the Yosemite emergency response staff. Smith was rescued and transported by helicopter to Yosemite Valley and then to Modesto, California, where doctors determined he'd suffered a mild heart attack.
Wesling says that ham radio is a standard part of his troop's outings. Both Wesling and Eagle Scout Rajeev Goel, KD6MXV, had VHF handheld radios along for the trip. As a result of their experience, Dave and Janet Smith are making plans to take one of the troop's Amateur Radio licensing classes. This way, they to will always be prepared.

(*****
SUMMERS RECEIVES ARRL LIFETIME ACHIEVEMENT AWARD

ARRL Midwest Director Lew Gordon, K4VX reports that Bob Summers, K0BXF, has received the ARRL Lifetime Achievement Award plaque after more than 30 continuous years as Kansas section manager and section communications manager.
First licensed in 1955, Summers has held a variety of ARRL appointments, including Official Observer, Official Bulletin Station as well as Section Emergency Coordinator for Kansas.
He was appointed acting section communication manager for Kansas in 1965 and was successfully elected for every term up until his retirement last November.
Director Gordon, made the presentation at the Kansas State Convention one day after Bob turned 67.

(*****
CB RADIO MAGAZINE

A few weeks ago we reported an unexpected and unprecedented resurgence in 11 meter Class D Citizens Band radio. Retailers say that more 11 meter CB sets were sold this past Christmas than in the past ten holiday sales seasons combined. On a percentage scale, CB is again one of the fastest growing radio services. And for the first

time in almost two decades, CB radio now has a magazine of its own. CB Radio Magazine is now available through subscriptions and on newsstands. The first issue contains a myriad of information for anyone who owns a CB radio or who is planning on buying one. And if you think that CB Magazine will be one of those short lived publications, you might want to guess again. CB Radio Magazine is the product of those same minds that bring you CQ Magazine, CQ VHF Magazine, CQ Contest and Popular Communications to name only a few. And, as the radio industry knows, the people at the helm of CQ Communications usually produce winners each time out.

(*****
HAVANA MOON S.K.

Any ham that has regularly tuned outside of the HF amateur bands to listen to international broadcast or utility stations and has followed background stories on those stations in SWL publications probably has heard of "Havana Moon". Bill Godbey, KB2OOR, who's alter ego was the mysterious "Havana Moon" is now a silent key.
Godbey, a resident of Ossining, New York, died shortly after being diagnosed with terminal lung and liver cancer at the age of 59. He had not been feeling well since this past summer. His wife Christine Paustain got him to see a doctor just before Christmas. He was admitted to the hospital on New Years Eve and passed away on January 9th.
Under his "Havana Moon" pseudonym, Godbey wrote regular articles about some of the more unusual aspects of shortwave listening. Though his own research he exposed those mysterious "numbers" stations that seem to be everywhere in the spectrum as government run spy stations sending encoded messages to operatives in the field.
A broadcast veteran, Godbey had also been involved in a mail order company that specialized in shortwave memorabilia, a radio hobby news program called Signals, and more recently in an internet consulting company.
The March issue of Monitoring Times magazine will pay tribute to "Havana Moon" with a reprint of an early article by Godbey and a biography of him written by his wife who is also known as "Kristin Kaye".

(*****
W1RJA S.K.

VHF veteran Ed Bristol, W1RJA became a silent key last December 1st. Bristol died in his sleep from a heart attack at age 64.
Active on 6, 2, 222 and 432, Ed had a commanding signal from his Connecticut QTH for over 30 years. A staunch supporter of the North East Weak Signal group from its inception, he had just been elected to its Executive Board of Directors
Ed Bristol is survived by his wife Rae, K1LXD.

(*****
DX

In DX, 3A2MD, in Monaco reports she is on every day between 14:00 UTC and 16:00 UTC on 14.175 to 14.180 MHZ. QSL to Laura-Marcelle Martinez, 73 Bd du Jardin Exotique, 98000 Monaco.

And to the north, Industry Canada Quebec Region has authorized all Canadian hams to use special prefixes through February. This to mark the 50th anniversary of the end of the Holocaust.

And in case you have not already heard, the ARRL Board of Directors has voted to add Scarborough Reef to the DXCC countries list. QSL cards for Scarborough will be accepted by the DXCC desk after April 1st. Cards received before April 1st will be returned without action.

(*****
STS-76

Five schools have been selected for participation in SAREX during space shuttle flight STS-76. Launch is tentatively set for March 21 for a nine-day mission that will include the third docking with Mir. Two or more students at each of the selected schools will get to ask the astronauts questions during scheduled SAREX contacts.

(*****
ASTRONAUT HAMS MARRY

And finally, in what appears to be a "first" for ham radio and for the United States space program, astronauts Steve Nagel, N5RAW, and Linda Godwin, N5RAX, were married December 29. Steve and Linda flew together on STS-37 in April 1991. Both have appeared as speakers for ARRL at conventions.
Nagel was the commander aboard space shuttle mission STS-55 in April 1993 and operated SAREX. Godwin, a NASA Mission Specialist, operated the SAREX during mission STS-59 in April 1994. She flies again on STS-76 in March.

The FCC meets to talk future spectrum needs, threats to a new ham
band are diverted and guess who's going to Spacecamp. Find out on
Newsline report number 966 coming your way right now!

(*****
SPECTRUM HEARING DATE SET

The FCC has set March 5th as the new date of its hearing on spectrum policy and management. The original hearing date was January 31st. It had to be rescheduled because of the Federal furloughs triggered by the congressional budget deadlock and heavy snow which extended the shutdown. At the hearing, the FCC will hear oral presentations and will allow a direct exchange of viewpoints between individuals and representatives of affected industries. The commission will select panelists from among those who have submitted letters of interest. They will address future spectrum demand and user needs, trends in technology, and approaches to spectrum allocation and assignment, including licensing and uses.

(*****
EXPAND PRB-1 REQUEST FILED

PRB-1 could be expanded to further protect the rights of radio amateurs to erect towers and install antennas. This, if the American Radio Relay League gets its way. The League wants the commission to take additional steps to compel state and local governments to make reasonable accommodation for Amateur Radio under PRB-1 and apply the least restrictive means to regulate amateur antennas and activity. In a petition for rulemaking filed February 7, the league calls on the FCC to amend Section 97.15(E) to say that any state or local ordinances restricting ham radio antennas to heights below 70 feet would be presumed unreasonable, unless the state or local authority could show its restrictions support a clearly defined health, safety or aesthetic objective. State and local governments also could not impose substantial application costs on amateur service licensees. The league also wants the FCC to acknowledge that it has an interest in the effective performance of amateur radio stations in areas regulated by deed restrictions or restrictive covenants rather than by local zoning ordinances.
The league says clarifying the preemption policy of PRB-1 will help guide municipalities to enact provisions that make fair accommodation for amateurs and avoid highly divisive litigation between hams and localities.
Under the suggested changes, state and local governments could apply to the commission for a full or partial waiver of the amended rules in unusual circumstances. At air time, the FCC has not assigned a rulemaking number to the League petition.

(*****
VANITY CALL SIGN PROGRAM STALLED

Meantime the FCC says that it will probably not start up the vanity call sign program in the foreseeable future. Newsline has learned that the FCC will delay until at least mid-1996 announcing the date when it plans to open the first gate or gates of the program. A Commission spokesman says the FCC must first deal with remaining Petitions for Reconsideration asking for numerous changes in the way vanity calls will be issued. The FCC had been expected to announce opening dates early this year. Now it could take up to a year or more

before the current crop of petitions for reconsideration are addressed.
Ironically vanity call sign application 610-V is now available, but the FCC says that it will not accept completed forms until it opens the appropriate filing gates. That could be many months, or possibly years away.

(*****
FCC SAYS YES TO HAMS ON 219-220 MHZ

The FCC has affirmed the secondary allocation of 219-220 MHZ to Amateur Radio. The action also denies a Petition for Reconsideration filed by Orion Telecom, an Automated Maritime Telecommunications System licensee.
Orion had argued for the FCC to rescind the decision to allocate 219-220 MHZ to ham radio. It says the 50-mile exclusion distance between AMTS and amateur operations was insufficient to protect primary AMTS operations from harmful interference. Orion asserted that a 575 mile exclusion distance was necessary. This would have precluded Amateur Radio operation in many areas.
The FCC did however agree with Orion's concern that the amateur rules do not adequately specify the frequency range of AMTS operations. It went so far as to amended its rules to specifically call attention to the fact that hams must look at 217-218 MHZ assignments to know what AMTS coast stations are operating in a given area.
But what it did not do was what Orion Telecom wanted. Orion may object to sharing with radio amateurs, but ham radio will stay.

(*****
FCC TAKES UNLICENSED FM STATION OFF THE AIR

A New York City FCC Field Engineer has successfully removed an unlicensed broadcaster from the airwaves. FCC Engineer Jud Mansbach used what appears to be a combination transmitter hunting know-how and personal diplomacy to put an end to a station called Nasty Radio. According to the trade publication Radio World, Nasty Radio first came to the FCC's attention last September as the result of a citizens complaint. The complaint was that a station operating on 91.9 MHZ was transmitting offensive material. Engineer Mansbach took a listen and found that the disk jockeys at the unlicensed station were using sexual innuendoes and making rude noises. They were also doing something that was not all that smart. They were giving out a request line call in number with a 718 area code prefix. That meant the station was in Brooklyn or Queens and making Mansbach's job a lot easier in tracking it down.
And track it down he did. Using the FCC's radio direction finding van it took him only fifteen minutes to arrive in front of an apartment house in Woodside Queens that sported a large mast on the roof. And it was at this point where Engineer Mansbach got a rather brilliant idea.

Since he was taping Nasty Radio in the van, Mansbach decided to call the request line to see what kind of a response he would get if he asked the DJ if he knew the operation was illegal. The announcers allowed that their operation might well be illegal, but added that they assumed the FCC really didn't care.

"They usually give phone numbers on the air, which are request lines. When they gave that number on the air I decided to call them. But the reason for calling them was not to make a request, but to actually prove intent. When I spoke to the guy he said that he knew that what he was doing was illegal. He also indicated that the FCC doesn't care. Which was nice, nice to know. Which isn't true of course, not in the New York area or anywhere in the country. But, when he said that I know what I am doing is wrong, a violation of FCC law, I can go criminal against this guy if I need to, because I proved intent, that he knew what he was doing was a violation of the law and he never the less said he wanted to violate the law." Mansbach

With that information, coupled with field strength measurements indicating that Nasty Radio was running at least 100 watts of power, Mansbach headed back to the office and quickly penned a cease and desist order. Nasty Radio went silent in mid December and has not been heard since. And while its true that Mansbach had more severe enforcement options available to him, he told Radio World that his primary interest was in getting compliance with the rules and getting the unlicensed broadcaster off the air.

(*****
ARIZONA HAM HELP

A Payson, Arizona teacher is being called a hero for providing aid to an injured motorist using Amateur Radio. As students were leaving school on Wednesday, January 17th, Roger Rohrbach, KB7IPU, heard a call for help coming over the classroom ham radio station. According to the ARRL Letter, the call came a ham who was an accident victim trapped in his vehicle in a sandstorm. He told Rohrbach that visibility was near to zero. The man wanted Rohrbach to call his wife and warn her away from the scene.
Rohrbach called the police 911 emergency number which dispatched emergency service rescue teams to the site of the twenty five car pile-up on Interstate 10.
Rohrbach, who is a fifth grade teacher at Payson Elementary School was said to be reluctant to accept praise for his actions.

(*****
NORTHWEST FLOODS

When major flooding hit the Pacific Northwest last week, ham radio was there to provide support for relief operations. Hard hit were Western Washington and Oregon where several rivers over-ran their banks causing massive destruction. More on this situation in future newscasts.

(*****
FAR OFFERS SCHOLARSHIPS FOR HAMS

The Foundation for Amateur Radio says that it plans to administer 57 scholarships for the 1996-97 academic year. This, to help licensed radio amateurs with their post-secondary education.
Eight of the scholarships are fully funded with income from grants and the foundation's annual hamfest in Gaithersburg, Maryland.
Licensed hams are eligible if they plan to pursue a full-time course of study beyond high school and are enrolled or have been accepted at an accredited university, college or technical school.
Awards range from $500 to $2000, with preference given in some cases to those pursuing certain courses of study or to residents of specific geographical areas.
Application forms and information are available by letter or QSL postmarked prior to April 30th mailed to:

FAR Scholarships
6903 Rhode Island Ave.
College Park, Maryland
20740

YOUNG HAMS NEEDED FOR DAYTON YOUTH FORUM

And speaking about youngsters and ham radio, if you are a young ham who is planning to attend next May's Dayton Hamvention, then Carole Perry, WB2MGP, wants to hear from you. Carole is the New York City teacher who hosts the annual Hamvention Youth Forum and she needs articulate young hams to come and speak:

"What we are looking for are youngsters who would like to get up in front of what we hope is going to be a large group of their peers and adults who have come to hear what they have to say. Who are willing to speak about and share their experiences in amateur radio. Describe what they have been involved with. And hopefully, youngsters who are enthusiastic and can convince others teenagers why this is a worthwhile endeavor for them." Perry

With her forum expanded to two and a half hours, there will be lots of time for a lot of young hams to talk. If you want to be one of them, contact Carole Perry by phone or fax:

(718) 983-1416

This number is available 24 hours a day.

(*****
KANTRONICS ON THE WEB

In ham radio industry news, Kantronics now has an e-mail account for customers to get technical support and service. Questions go to:

service@kantronics.com

The company says that representatives will respond via e-mail. By the way, Kantronics now includes the RF Concepts line of products as well.

(*****
APPLE SPLITS FROM IBM

Apple and IBM are shutting the doors on their Kaleida Labs. Kaleida was multimedia venture and its demise spells the end to a symbol of their effort to work together.
Kaleida's core products, including their multimedia software programming language will be transferred to a development team within Apple, to be based at Apple's headquarters in Cupertino, California.

(*****
NEBRASKA CONVENTION

The 1996 ARRL Nebraska State Amateur Radio Convention, sponsored by the Elkhorn Valley Amateur Radio Club will held March 8th to the 10th at the Northeast Community College in Norfolk. For more information you can e-mail to:
davidn0xbn@aol.com

(*****
GB2RS

Almost every week, Newsline finds itself quoting the GB2RS News service as a source of information from Great Britain and the European continent. A number of listeners have asked to learn more about this service, so this is what you want to know.

GB2RS is the news broadcast service of the Radio Society of Great Britain and is provided for the benefit of all radio amateurs and listeners. Unlike Newsline, the GB2RS newscast is not pre-recorded. The script is prepared each week at RSGB headquarters. It is then transmitted live each Sunday by a network of volunteer news readers on the HF, VHF and UHF bands, covering the whole of the United Kingdom and into other parts of the world as well.

(*****
IEEE MEETING

And from GB2RS comes word that the Institute of Electrical Engineers hosted an international conference on 100 Years of Radio at Savoy Place in London at the beginning of September. The opening of this three day event was graced by the presence of Princess Elettra Marconi. Several hundred leading personnel from the electronics field gathered for this unique conference, which included a series of 30 papers on the present state of the art, including some related to amateur radio.

(*****
DX

In DX, PA3GBQ, is now active from Ghana as 9G5BQ on all bands.
Check around 3515 kHz around 0240 zulu and 7010 kHz around 01:15 zulu.
The length of his stay is unknown at this time. QSL via his homecall.

Also, PY5CC says he will be on Fernando de Noronha Island for about
a week starting on the 27th of March and on 6 meters. His call sign
will be PY0FM. QSL to his home call via the bureau.

YHOTY WINNER TO SPACECAMP

And finally, the youngster selected as the 1996 Young Ham of the Year
will almost get to fly in space! This, with the announcement that CQ
Magazine will treat this years winner to a week at Spacecamp. Rich
Moseson, NW2L is the editor of CQ VHF Magazine and a spokesman for the
company:

"As an extension of our co-sponsorship of the Young Ham of the Year
Award as we enter our second year of the program we're going to
provide the winner this year with a one week paid visit to Spacecamp."
Moseson

In addition to Spacecamp, the 1996 Young Ham of The Year will be
treated to an expense paid trip to next August's Huntsville Hamfest.
There, he or she will receive a gift of a commemorative plaque and a
piece of ham gear. The trip and the radio equipment is courtesy of
Yaesu USA Corporation. The plaque is from us here at Newsline.
According to Bill Pasternak, WA6ITF who administers the award, its a
giant step forward for the youth of ham radio:

"We began almost eleven years ago with a very simple idea. We
wanted to honor young hams of their accomplishments the same way that
grownup hams are praised for theirs. And we started with nothing more
than an idea and a plaque. Yaesu made it possible for the winner to
be presented the award at a ham convention banquet. And they added a
gift of their own. Now CQ and especially Dick Ross, K2MGA, over at CQ

is adding another gift. The gift of a week at Spacecamp as a fun and educational experience. Who knows where that will take this years winner in his of her career in years to come." Pasternak

CQ's Rich Moseson agrees:

"For a kid who may be considering a career in technology. Wether or not it is space technology, I don't think there isn't anything that can compare with the experience that they will have in the week at Spacecamp. It's, from everything I've seen and heard about that place, it's just a wonderful experience for everyone who goes through it." Moseson

The Young Ham of the Year Award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger. A ham who has provided outstanding service to the nation, the community or the betterment of the state of the art in communications through the Amateur Radio hobby service.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a self addressed stamped envelope mailed to the:

1996 Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus, California
91350

Forms are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on America Online.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF at our editors desk, we at Newsline say 73 and we thank you for listening.

Alas, older VWs had chronic ignition noise problems. Fortunately
there is a cure. VW engines are used in homebuilt aircraft, and
there is a *fully shielded* ignition kit available for the VW
engine. Check at the airport.

Perhaps this may be true with respect to the US regulatory framework, but I hardely see how it is germaine to the original posters's comments when FCC juristiction does not apply in Canada. I suspect that the poster is looking of a reply that would be more applicable in the broader context, rather than the (supposedly) narrow view of Part 97, which I repeat for emphasis, is not applicable to Canadian amateur operation.

73 and live better digitally
Jim, VE3XJ

2608. Any Alternative to Code?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-19 00:00:00 UTC
From: macino@mail.fwi.com
Message-ID: <4ga358$dho@news.ios.com>
Source record: 230544

Hi,
I've been scanning packet now internet headers for years. Code - no code, reminds me of Ford-Chevy, Tastes Great-Less filling, debates. WHAT is the big deal? If as much energy was spent whining about the pro and cons of this debate was used to study to improve ourselves and our knowledge of Radio and Electronics we would all be a lot better. I'm an Extra, there is a lot that I don't know. When I hear guys on the air that have 'higher leveled' licenses that can't explain how to calculate what size fuse to put in the line of a two meter mobile rig. I wonder if the real test should be a combination of theory, practical knowledge, knowledge of transmission principles (yes, at least know when you might use code to get through when nothing else works) like CW, RTTY, AMTOR, PACTOR, PACKET etc.

For the last three years I've taught 'HAM' classes at our club and at a local Junior High. At least the 'HAMS' that I've Elmer'er can figure out an Ohms law problem, discuss propagation, and tell you what the block diagram components of a radio system can do, and how. Mindlessly sitting in front of a computer screen memorizing quiz questions, isn't exactly 'furthering the abilitity'. I've been 'hamming' off an on for 35 years. Over the weekend, I worked a little of the CQWW CW contest. Is using a computerized keyer slapping that virtual paddle at 40 WPM CW?, or is it low grade RTTY? I think 13 WPM is attainable for the bulk of the individuals that 'want to do it'. If you don't, then maybe a 'practical factors' test would be an alternative method of obtaining a higher level license. Maybe sitting down and designing a workable transceiver with commonly available components, and then building it, in front of a group of your peers. Of course, the parts list would have to be standardized across all test sites. It's not as wacky as it sounds. One element could be a receiver, another element the transmitter, the third the antenna system.

> Thanks in advance

Here's a shopping list (from the equipment list for the N6MZV/KD6JTT 1.2g repeater):

Icom used to sell a 1.2 GHz repeater IC-RP1220 23cm repeater
Wacom WP-698 23cm Duplexer
Down East Microwave 23LNA preamp
Down East Microwave 2335PAHS 35W Amp
PolyPhaser IS-MR50LN 23cm lightning protector
Astron RM50-BB power supply with gel cell backups

We used an ACC RC-850 repeater controller. They're no longer in business.

You need a duplexer. The combination of the duplexer and any length of line to the antenna (we use 7/8" Andrew LDF-50) costs you db, so we put a preamp in front of the Rx and a power amp after the Tx.

Drop me a note if you want more info.

Hello,

can anyone send a simple wiring diagram of a Morse key (transmittor)?

This is what a young friend of mine asked me to put into a BB.
I'm not quite sure what he means but I hope there's help.

Cheers
H.B.

SB NEWS @ AMSAT $SPC0219
* SpaceNews 19-Feb-96 *

BID: $SPC0219

=========
SpaceNews
=========

MONDAY FEBRUARY 19, 1996

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* CHINESE LAUNCH FAILS *
========================
A Chinese "Long March 3B" rocket crashed during launch on 14-Feb-96
destroying an Intelsat VII A2 (TVRO) communications satellite, according
to industry sources. The Long March rocket just barely cleared the tower
before it started veering sideways, and then crashed to the earth. At that
point the uplink was immediately cut. It is not clear whether the drop of
the uplink was caused by interruption of power or the censor's finger on
"the button".

[Info via Gary Bourgois, WB8EOH]

* W0CY - SILENT KEY *
====================
Another sad note. Jim McKim, W0CY, became a Silent Key 14-Feb-96. Jim
was born in 1915 and first licensed in 1933. He had been involved in
satellites since the launch of Sputnik I in 1957. A Life Member of AMSAT,
with a Life Membership Number of 7, as well as a life member of ARRL and
QCWA, Jim was known as "Mr. Ham Radio" all over central Kansas. W0CY was
an ardent supporter of AMSAT. Among his activities for the organization
was his stewardship of the of the Mid-America Section of the 75 Meter AMSAT
Net since its inception in the 1970's.

Jim McKim was also active in the Central States VHF Society and was an avid
VHF'er. He was especially fond of the six meter band. His first love was
CW and he was still able to copy it to the end.

The heating and air conditioning business, which he headed, designed and installed the systems in the Eisenhower Library and Museum complex in Abilene, KS. Jim had also been an amateur radio equipment dealer in Salina, Kansas. His satellite activities were featured in the December 1986/January 1987 issue of Smithsonian Air & Space magazine in an article entitled: "Homebuilt Satellites." This article, by Nancy Shute, captures the essence of Jim's activity on satellites and the AMSAT 75 Meter Net. He was also featured in an article by Jim White WD0E in the May/June 1994 issue of the AMSAT Journal. W0CY's booming voice will be missed by all on the 75 Meter AMSAT Net and the bands above 50 MHz.

[Info via the AMSAT News Service]

* MIR NEWS *
============
Yuriy Gidzenko and Thomas Reiter carried out a 3 hour, 2 minute spacewalk on 08-Feb-96, starting around 1307 UTC from the Kvant-2 airlock. The walk was reportedly shorter than planned due to a pressurization problem in the suit of EO-20 mission commander Gidzenko. The Cosmonauts recovered some samples which had been exposed to space on the exterior of the Spektr module (the ESEF or European Space Exposure Facility) to study the effects of radiation, vacuum and debris impacts. Launch of the EO-21 crew, Yuriy Ivanovich Onufrienko and Yuriy Vladimirovich Usachyov (callsign Skif-1 and Skif-2) will take place on 21-Feb-96.

[Info via Jonathan's Space Report #275]

* STS-75 LAUNCH *
=================
Just a reminder that space shuttle "Columbia" is scheduled for launch this week on 22-Feb-96.

* RS-12 NEWS *
==============
RS-12's recent switch to "Mode KT" allows its 2-meter downlink to be received and relayed through any satellite with an uplink passband within RS-12's VHF downlink passband. Such satellites include RS-10 operating in "Mode A", and FO-20, operating in "Mode JA". Careful planning can yield some interesting "dual-hop" contacts when these satellites are properly aligned in orbit.

1.4 List of contributions.
1.5 Credits and other things.

_____________________________________________

1.0 What is BASIC Stamp ?
-------------------------

This is being written for people who have no idea of what a BASIC
Stamp is...

BASIC Stamps are small reprogrammable single board computers (SBC)
that run BASIC programs and are made by Parallax, Inc. in US. At
first glance, they may seem fairly minimal - and in fact, they are.
But with software that fully utilizes all available hardware, the
Stamps give you powerful features - without the cost of hardware.

Their low cost and simplicity make the Stamps perfect for many
prototyping and control applications. It's suitable for electronics
hobbyists as well as electronics professionals in many different
areas.

Typical application areas for BASIC Stamp's are...

- General electronics
- Home automation
- Robotics
- Mini PLC
- Education
- Prototyping
- HAM related applications
- Special effects in films
```

- Industri control
- Geological instruments
- Computer peripherals
- Scale model hobbyists

As an talent engineer and technical writer expressed it...

- BASIC Stamp is the 555 of the 90's !

1.1 What is L.O.S.A all about ?

I started to compile L.O.S.A because I know there are lots of great ideas and many problems that are solved with the BASIC Stamp and the main purpose of this list is to get an idea of what other people are using their BASIC Stamps for and maybe get some inspiration or hints.

Remeber it's up to all of us if this list are going to be any good and I'm looking forward to receive a description of your application.

1.2 How can I contribute to this list ?

If you have done something with the BASIC Stamp (big or small) that you are willing to tell others please use the form given below and write a short description, nothing fancy is needed just a simple explanation. If you have source code to share that's even better but it's not necessary.

Then e-mail the form to:

cj@hth.com

With the following as the subject:

L.O.S.A Contribution

Or you could point your Web-browser to the following URL and fill in the L.O.S.A form on the Web-page...

http://www.hth.com/losa.html

==========
Title : Robo-Cat [# 001]
==========
Date : 950807
Author: Gustavson Guy W.
E-mail: GWGUSTAVSO@mpg.norstan.com

Stamp model : BASIC Stamp Rev. D
Code available: N/A
Filename : N/A
URL : http://www.winternet.com/~bigfoot/cat.html

Description :

My cat, Kesha, was recently diagnosed with Heptic Lipodosis. Or
"Fatty Liver", basicly what this means is that for some reason he
stoped eating and his liver started converting body to useable
sugars. The fat deposists biuld up in the liver and cause severe
liver damage. Because the liver isn't working well the cat feels
crappy and wants to eat even less. The treatment for this disease is
to run a tube down down the cats nose into his stomach, or a PEG
tube through the abomine wall into the stomach and feed the cat a
liquid diet this way.

I love my cat, but I can't be there every three hours to feed him
through the tube for a month. Something about work and deadlines and
such. So I went to a local supplus house and got a tiny motor driven
pump, a case, some switches, a micro switch, ect...

The micro switch is mounted such that the switch trips for every
rotation of the pump shaft. The stamp turns on the pump for on a
single rotation at intervels programable from the controll switches
on top. An alarm buzzer and LED flash if the pump fails to run for
any reason. The unit is programable for 9 differents deleviery rates.

Now he gets a slow continuious feeding and he seems to tolerate this
better than the 100ml feeding every three hours.

==========
Title : Logic Rudder [# 002]
==========
Date : 950812

Author: Christer Johansson
E-mail: cj@hth.com

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : LRUDDER.ZIP
URL : http://www.hth.com/filelibrary/BS1-IC/

Description :

Many of the new and very realistic flight sims available today needs rudder to let you get full control. This one uses a digital pot from Xicor (X9104) and 10 other components. Connects to a standard IBM-PC game port and power is taken from the port.

It uses two micro switches for controlling the rudders left or right and to indicate when rudders move there is a red LED that lights up when you press the micro switches and to indicate center there is a green LED. If you press the both micro swithes the rudder will automaticly return to center position.

There is a trim pot to set the desired step rate from slow to very fast and the Xicor pot has 99 steps wich gives a fair resolution.

==========
Title : Interfacing MAX186 8 channel 12bit A/D [# 003]
==========
Date : 950925
Author: Helmut Fligge
E-mail: h.fligge@asco.nev.sub.de

Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : N/A

Description :

This Program interfaces the Stamp1 to the MAX186 A/D converter. Via RS232 2400bps the stamp is asked to measure channel numbern. After conversion the result will be returned to the host computer as an ascii string (0 .. 4096). Conversion rate is about 4 measures per second.

==========
Title : Scrolling LED Sign [# 004]
==========
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org

Stamp model : BASIC Stamp Rev. D

Code available: Maybe sometime
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html

Description :

Scrolling LED sign, 35 super-bright LEDs in a 5-by-7 matrix in the prototyping area of a Basic Stamp rev D. A scrolling alphanumeric message moves one pixel at a time, just like real scrolling LED signs, except this one only displays one full letter or portion of two letters at a time as the message moves by.

==========
Title : Tone Decoder [# 005]
==========
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org

Stamp model : BASIC Stamp Rev. D
Code available: Soon
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html

Description :

Listens for telephone touchtones, displays phone numbers on LCD screen and echos them out RS-232 port. Circuitry fits in prototyping area of rev D Basic Stamp:

Microphone preamplifier, touchtone decoder IC.

==========
Title : Pager [# 006]
==========
Date : 950928
Author: Don McKenzie
E-mail: donmck@tbsa.com.au

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : PAGER.BAS
URL : http://www.labyrinth.net.au/~donmck

Description :

This program for the Basic Stamp is used to monitor 4 hardware signals. If a change takes place, (after testing for a false trigger) then a cheap 2400 baud MODEM is used to dial into a Telecom Alpha-Numeric pager. It leaves a message which consists of a 2 digit I.D. (01 to 99) followed by the 4 signal levels of pins 3 to 0.

Status of the signal levels message: 0=Low, 1=High. EG: "011110"
means Unit "01" has pins 3, 2, and 1 high, and pin 0 is low.

A "Ring-In" feature is also included. By ringing the MODEM for a
short period, then hanging up, the Stamp will dial your Pager and
report the current hardware status of these four signals.

This program uses about half of the available memory, so if the user
wishes to add enchancements such as "Multiple Ring-In's" say within
a minute, for a command selection, there is plenty of program space
left.

```
=============================================================================
Title : HexWalker Mobile Robot [# 007]
=============================================================================
Date : 950929
Author: T. R. Thornton
E-mail: mandtsys@ix.netcom.com
-----------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D or BS1-IC
Code available: YES
Filename : WALK.BAS
URL : N/A
-----------------------------------------------------------------------------
Description :
```

HexWalker is a six legged mobile robot that is controlled by a BASIC
Stamp or BS1-IC, and driven by three servo motors (similar to Futaba
S148). It is the simplest walking machine architecture that can walk
forward, backward, and turn left or right.

```
=============================================================================
Title : Robo Bug [# 008]
=============================================================================
Date : 951003
Author: David Novick
E-mail: dkn@cimar.me.ufl.edu
-----------------------------------------------------------------------------
Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : http://www.me.ufl.edu/~dkn
-----------------------------------------------------------------------------
Description :
```

Using two stamps, a robot with six legs (2 degrees of freedom each)
was able to walk and turn (at this stage, not very gracefully).

```
=============================================================================
Title : EXPBOT Robot controlled by Stamp [# 009]
=============================================================================
Date : 951009
Author: Marvin Green
```

E-mail: marvin@agora.rdrop.com

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : EXPBOT.BAS
URL : E-mail author and he will send it

Description :

This program allows a cool robot to move abound a room in search of light. Like a moth. Simple program changes can dramatically change the robots behavior.

==========
Title : Andrews Ever Evolving Lego Robot [# 010]
==========
Date : 951119
Author: Andrew H. Hochheimer
E-mail: softarts@ciaccess.com

Stamp model : BS2-IC
Code available: YES
Filename : N/A
URL : http://www.wincom.net/~softarts

Description :

Currently the robot can only navigate to the brightest light source in a room. It's current operation mode has four major steps: - Scan a 180 Degree Field of "Vision" taking light level readings, and determining the brightest direction of light. - Decide if it needs to turn left, right, or continue moving forward. - Check for collision with an object while moving, if a collision occurs, display the total travel distance on the display - Move forward for 1.5 Seconds and then repeat the process.

Currently I am using Two Futaba FP-S128 Servos (any RC Car Servos would work) one to sweep it's "sensors" form left to right, and one to "stear" the robot.

You can see pictures and more information on my homepage, just follow the lego robot link.

==========
Title : Factory Monitoring System [# 011]
==========
Date : 951120
Author: Paul Willemse
E-mail: pjwill@merlion.singnet.com.sg

Stamp model : BASIC Stamp Rev. D
Code available: YES

Filename : N/A
URL : E-mail author

Description :

The system presently consists of 4 Basic Stamp units. Each monitors up to 5 inputs. The inputs are 'digital' (switches) and/or analog (temp, airflow, current, etc using commercial sensors). All stamps communicate the results via serial mode to a Macintosh (Yes a Mac!) where the results are graphically displayed and monitored. Alarms are set for certain conditions.

The transmission is simple, one way only. Each stamp sends the info at a 'random' interval not exceeding 2 seconds. The message format is fixed, the Mac will throw away any conflicts in case two or more stamps transmit at the same time. BTW this happens very seldom. The max time any stamp can be 'absent' from the chain before an alarm is raised is six seconds (failure, transmission collisons, etc). This is controlled by the Mac.

The 'system' is presently in beta test, the client wishes to expand up to 20 stamps. At that point we will likely use the BS1-IC or BS2-IC on custom boards located around the facility.

Code is available upon request (e-mail) partial, some is proprietory to my client.

==========
Title : Wave to the Cats/Desk Temperature [# 012]
==========
Date : 951121
Author: Paul Haas
E-mail: paulh@hamjudo.com

Stamp model : BS1-IC
Code available: Yes
Filename : See web server
URL : http://hogwild.hamjudo.com/cgi-bin/stamp

Description :

The Stamp has a serial connection to web server, a cardboard hand, a servo motor to move the hand, and a DS1620 thermostat chip to measure the temperature. The web server can request the current temperature or start the hand waving. See the web page for the source code for the temp and the web server.

It's mostly useless. The cats ignore the hand. A few people find it entertaining.

==========
Title : Gamer's Die Roller [# 013]
==========

Date : 951122
Author: Larry Tremblay
E-mail: ltremblay@domus.com

Stamp model : BS2-IC
Code available: N/A
Filename : N/A
URL : N/A

Description :

The Gamer's Die roller is a little thing I am putting together as my first Stamp Project. The Roller allows cumulative rolls of n dice up to 256 sides, so long as the sum does not exceed 99,999,999(!)

It uses two 74HC161 4 bit counters cycling at 1MHz to draw random numbers off of. Input is achieved via a Grayhill model 38 keypad and a 74C922 keypad decoder. Display is on a Siemens PDSP-2111 8 character smart display (5x7 LED characters) fed by two 74HC164 serial to parallel shift registers cascaded so I can use Shiftout to feed 16 bits of control + data off of 2 pins.

The code is very simple, the most exotic part being the random numb-er generation. In a nutshell, it is:

Begin Loop
S = 8 bit number drawn from the counter (random)
if S < (255/N) x N (integer divide, N is number of sides on die)
exit Loop
End Loop

This gets (pseudo) random numbers whose average is not skewed downwards by the counter's max of 256 (i.e. a 100 sided die is not affected by the extra 56 in the count maximum)

Using gamer's dice notation, (5d6 = sum of 5 six sided dice, 3d10 = sum of 3 ten sided dice), the user can input whatever combination they wish, including just 'd6' for one six sider. The keypad I have has removeable keycaps with legends, so I have 0-9 plus 'd' and '=' on them.

As noted earlier, since I am using an 8 bit counter, the maximum die size is 256, although that could be fixed easily by sampling two, three or more times for each die.

Anyhow, that's it. When the code is done and debugged, I'll be happy to e-mail it to any who want it.

==========
Title : Stamp II Serial I/O [# 014]
==========
Date : 951128
Author: John Hansknecht

E-mail: Hansknec@cebaf.gov

Stamp model : BS2-IC
Code available: Yes
Filename : HAL01.bs2 and HAL01.bas
URL : ftp.parallaxinc.com

Description :

A bare-bones demonstation of 2 way serial communications between a
PC running Qbasic and 1 or more Stamp II's.

==========
Title : Voice and CW Fox Hunt Transmitter IDer [# 015]
==========
Date : 951221
Author: Sam Guccione
E-mail: sguccion@outland.dtcc.edu

Stamp model : Counterfeit Stamp
Code available: Yes
Filename : Revision of S. Edwards MORSE program
URL : N/A

Description :

An IDer based upon the MORSE program. Has 4 time delays as well as
a random time delay. Circuitry includes selection of a voice id
using the Radio Shack 10 voice board or the Walden bookstore 10 sec
talking gift card. This is a very simple circuit and program but was
developed by my students under my direction.

May be of interest to someone out there.

==========
Title : Lift (elevator) Controller [# 016]
==========
Date : 951225
Author: Dave Bell
E-mail: dbell@cup.portal.com

Stamp model : Faux Stamp (BASIC Stamp clone)
Code available: Yes
Filename : Upon request
URL : N/A

Description :

A simple control loop monitoring lift Call buttons (with debounce)
and Limit switches, forbidding manual control past limits, and en-
forcing a Stop before reversal of direction. This will be used in
an owner -designed and -built single story platform lift for a home.

=========================================================================
Title : Paging with the Stamp [# 017]
=========================================================================
Date : 960104
Author: Kurt Clement
E-mail: kclement@kraft.com
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: Yes
Filename : monitor.bas
URL : N/A
-------------------------------------------------------------------------
Description :

Use the Stamp to monitor several inputs, two temperature and two
contact closures in this application. When inputs go outside set
limits, dial pager and send coded message. Used to monitor power
failures and temperatures for computer and network equipment since
August 1994, running on 9 V power supply from one of the UPS units.

=========================================================================
Title : Switching Sytem [# 018]
=========================================================================
Date : 960109
Author: Alexander Avendano
E-mail: aavendan@aros.net
-------------------------------------------------------------------------
Stamp model : BS1-IC Module
Code available: N/A
Filename : N/A
URL : N/A
-------------------------------------------------------------------------
Description :

I'm almost finishing a Basic Stamp Based Switching System (Small
Phone system) which I consider very usefull for small companies that
cant'n afford other brands. This is designed with a host computer
which will have a vox-mail and all the functions like big ones to
choose. I'm using BS1-IC's for the extensions process right now.

As soon I have complete it I will give the code away for small
Intelligent Switching phone system up to 2 Lines and 4 Extensions
using the L.C.D serial circuitry for information display. I forgot
to mention that the computer (Host for many processing functions)
will be running under Windows 3.1 and Windows 95, making this way a
usefull computer not only for the phone system but for ithers
application at the office.

Please be free to send me E-mail, about any suggestion.

=========================================================================
Title : Door Entry Card Reader [# 019]
=========================================================================
```

Date : 960110
Author: Ed Buckley/J J Barbarello
E-mail: ed@milinst.demon.co.uk

Stamp model : BS1-IC Module
Code available: YES
Filename : N/A
URL : N/A

Description :

Stamp 1 based version of the Card Reader article by J J Barbello as described in the August 1995 edition of Electronics Now. This version uses the Stamp 1 as a local controller determining the card number and deciding whether or not to allow door opening. Optional serial comms back to a master controller and optional local message readout using an LCD Backpack.

Lots of scope for further enhancement/experimentation. Circuit schematic and listing available.

==========
Title : Telephone Card Reader [# 020]
==========
Date : 960119
Author: Francesco Volpe
E-mail: f.volpe@ee.mu.oz.au

Stamp model : BS2-IC Module
Code available: YES
Filename : TELEMARK.LZH
URL : ftp://ftp.ix.de/pub/elrad/010/

Description :

The BS-II is used to read a German telephone card, which is a smart card. For more details see the German Electronic Magazine ELRAD (http://www.ix.de/el).

The data is transfered via RS232 to any terminal program.

==========
Title : DTMF Decoder [# 021]
==========
Date : 960125
Author: Joe Altieri
E-mail: radioman@banished.com

Stamp model : BS2-IC Module
Code available: YES
Filename : DECODE.BS2
URL : N/A

Description :

A new parallax BASIC Stamp II program for decoding a nine digit DTMF sequence of "Touch Tones" for remote activation/de-activation of any electrical appliance via Ham Radio, radio link, telephones, intercoms, etc.

==========
Title : Ion chamber radiation monitor [# 022]
==========
Date : 960125
Author: Jeffrey L. Rothman
E-mail: rothman@bnlls1.nsls.bnl.gov

Stamp model : BS1-IC Module
Code available: YES
Filename : RADMON12.BAS
URL : N/A

Description :

A Basic Stamp monitors the operation of an ion chamber radiation detector. The ion chamber and related circuitry produce a signal with a frequency proportional to the dose rate. The Stamp measures the frequency and calculates the dose rate and total integrated dose.

The results are displayed on a log scale panel meter and an LCD respectively. The dose rate is also transmitted over RS-232 to a remote PC.

A Front panel button allows the user to reset the total integrated dose. Another button allows the audio alarm to be muted at low dose rates.

==========
Title : Barn Monitor [# 023]
==========
Date : 960203
Author: Lynn A. Roth
E-mail: lynnr@hesston.edu

Stamp model : BS2-IC Module
Code available: YES
Filename : N/A
URL : E-mail author

Description :

The Barn Monitor checks the temperature in 5 rooms of a farrowing house. The temperatures are taken by DS1620 chips.

If the temperature goes outside the limit set by the farmer, the Stamp dials a pager using a 2400 baud MODEM. The same occurs if the power goes out.

==========
Title : Dallas one-wire interface [# 024]
==========
Date : 960212
Author: Daniel G. Clemmensen
E-mail: dgc@shirenet.com

Stamp model : BS2-IC Module
Code available: YES
Filename : N/A
URL : http://www.shirenet.com/~dgc

Description :

As part of a furnace controller project, I've interfaced A Stamp II to a string of Dallas 1820 digital thermometers. The interface consists of three cheap IC's and some subroutines. A design note and a demo program are available on the web. I have successfully tested the interface with a string of twelve 1820's.

I have not yet tested it with other one-wire devices, although I will update my web site when I do.

2618. Re: No Code = No Brain = C.B.

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: <>
Message-ID: <4gb4pa$182@news.onramp.net>
Source record: 230382
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner

No Code = No Brain = C.B.

The following message is a refutation of the above statement.
In fact, the following is much more true:

Amatuer = Ham = No Brain

My last post on this thread caused me to receive no less than 5
emails from upset amatuer radio operators attempting to defend
the current F.C.C. license tests which include Morse Code testing.
Let me take a moment to say that it has been my experience that
amatuer radio operators are usually fine citizens and they are very
helpful to persons seeking to follow the prescribed path to obtain
a license to transmit within the bands designated for amatuer radio
operation. I commend the amatuer operators for being so darned
helpful. The flipside of the situation is that the number of people
becoming interested in the old hobby is at an all time low. In my
opinion, most types of people today who might become interested
in radio are very quickly choosing computers instead, and for many
reasons. The rate of technical progress for radio is at a snails pace
compared to computers. Computers require no license at all. I think
that one of the problems here is that most of the old ham radio
people (the ones who are still interested) fall into one of 2 classes:

1. They are proud that they learned the 1800's trade of Morse Code
2. They think the government is god and it would be unwise to challenge

At this point in time it might be best if the F.C.C. started thinking about
alternative uses for the many bands that are assigned for amatuer usage.
These bands are currently under utilized and would be
more useful if they were assigned to another purpose.

As an alternative, the government should then assign some bands for
general civilian use and then require every radio to have a sub carrier
digital encoder that identifies the radio so that any person causing
problems could be identified and fined. Needless to say, some people
would just remove the encoder, so maybe it's not really possible to
regulate radio use.....

Just some thoughts and ramblings.....

>>
>For one thing you need a license before you can "HAM brodcast." And another
>you don't broadcast in amateur radio.

What Victor is trying to say is that amateur radio operators aren't
allowed to "broadcast" to the general public. There are, however,
amateur radio stations that broadcast to amateur radio operators,
about subjects relating to amateur radio although it's generally
frowned upon when done by private individuals.

As for living in an apartment - it depends on how creative you are. :-)
I lived in a townhouse for two years in which I used "invisible"
antennas strung up along the roofline, and never ran more than 5 watts.
(Which is generally considered to be very low power). I still managed
to have contacts with nearly all 50 states, and quite a few
European countries, on the HF bands.

If you're interested in VHF and higher, which generally provides you
with local contacts using voice, Morse code, and packet (computer-to-
computer) communications, antennas are MUCH smaller, and therefore
easier to deal with.

Try contacting the American Radio Relay League in Newington, CT.
They have all sorts of free information on how to get an amateur
licence. Additionally, they sell at least one book describing
"low-profile" communications for people who are living in apartments/etc.

"Macnet Roster" (ver. 733) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

ANARTS RTTY News Bulletin 896 18th FEBRUARY 1995

[Sigh - somebody remind me to tell these RTTY types to not shout
or double-space; just when I thought I had them trained ...]

Welcome to A.N.A.R.T.S., The Australian National Amateur Radio

Teleprinter Society

A.N.A.R.T.S. News Bulletin 896 18th FEBRUARY 1995

OUR REGULAR BROADCAST OFFICER PAT VK2JPA IS AWAY THIS WEEK

HAVING A LITTLE BREAK AND THIS WEEKS CAST IS COMPILED BY COL

VK2CTD WHO SENDS GREETINGS TO ALL OUT THERE IN RTTY-LAND. HOPE

YOU ALL HAD A TERRIFIC (HIC) TIME OVER CHRISTMAS/THE NEW YEAR.

I DONT GET TOO MANY OPPORTUNITIES TO SAY HELLO TO ALL THE GUYS

AND MAYBE A FEW LADIES WHO TAKE THE CAST ESPECIALLY THOSE OVER

IN W.A., HOPE YOU CONTINUE TO ENJOY THE CASTS THIS YEAR. THE

LAST TIME I PREPARED THE CAST, I MENTIONED PROPAGATION, THERE

HAS'NT BEEN A LOT OF IMPROVEMENT, UNLESS THAT PIECE OF STRING

HUNG UP ON TOP OF MY ROOF THAT I USE FOR AN ANTENNA HAS BECOME

FRAYED AGAIN AND THAT IS THE CAUSE OF ALL MY TROUBLES.IT WOULD

BE INTERESTING TO KNOW HOW CONDITIONS ARE IN YOUR PART OF AUSY

HOW ABOUT SENDING ME A REPORT LETTING ME KNOW CONDX WHERE YOU

LIVE AND I WILL COLLATE THE REPORTS AND INCLUDE THE RESULTS IN

A FUTURE BROADCAST. EVEN IF YOU DOWNLOAD THIS BULLETIN ON YOUR

PACKET BBS, SEND ONE IN.THATS ENOUGH FROM ME THIS WEEK 73'S TO

ALL DE COL VK2CTD(AT) VK2DAA.

ONE HUNDRED YEARS OF RADIO. MARCONI DX NOTE FROM I0KHP.

THE EVENT MARCONI STATION IY0TCI, PERIOD - FEB 15 TILL APR 30
1996, LAST DAY TO OBTAIN THE QUOTE GMA UNQUOTE GUGLIELMO
MARCONI AWARD, OF THE CENTENARY OF RADIO, BY ARI HQ MILAN.
IY0TCI WILL BE ON AIR, SINGLE OR MULTI, DURING INTERNATIONAL
CONTESTS:
CQWW 160M PHONE, ARRL DX CW AND SSB, CQWW WPX PHONE, AND THE
INTERNATIONAL MARCONI DAY APR 20 1996 SATURDAY (24 HOURS). SO
FOR IMD AWARD, SPECIAL QSL, SASE OR BURO, VIA I0KHP.

FIRST MAN - I HAD TO SHOOT ONE OF MY DOGS LAST NIGHT
SECOND MAN - GEE THATS BAD LUCK, WAS HE MAD?
FIRST MAN - WELL, HE WASNT VERY HAPPY ABOUT IT
BOOM BOOM

IPS REPORT

THE REPORT I HAVE RECEIVED FROM THE IPS SERVICE IS VERY BRIEF
THIS WEEK. ONLY THE A INDICES AT LEARMONTH FOR THE 6-12 FEB
WERE INCLUDED. I HAVE THE DAILY REPORTS WHICH GIVE A MASSIVE
AMOUNT OF DATA, FROM WHICH I HAVE SORTED SOME RELEVANT INFO. I
CAN NOW APPRECIATE THE MIGHTY JOB PAT VK2JPA DOES EACH WEEK.
IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
6TH TO 14 FEBRUARY 1996
ISSUED ON 15TH FEBRUARY 1996
SUMMARY
DATE FEB 06 07 08 09 10 11 12 13 14 (AT LEARMONTH)
A INDICE 6 8 8 7 12 17 13 11 12
SOLAR ACTIVITY WAS VERY LOW. NO FLARES OR FADEOUTS OBSERVED.
THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET TO
UNSETTLED AND SLIGHTLY HIGHER ON THE 17TH FEB. MUF'S AT
DARWIN WERE DEPRESSED 15 TO 20 PERCENT UNTIL 0500 UTC AND

SPREAD F WAS OBSERVED AT LOCAL DAWN. AT TOWNSVILLE STRONG

SPORADIC E WAS OBSERVED. AN INCREASE IN ACTIVITY OBSERVED ON

10TH AND 11TH FEBRUARY IN ASSOCIATION WITH CORONIAL HOLE.

FORECAST 15TH FEB TO 15TH MARCH 1996

SOLAR : LOW TO VERY LOW.

GEOMAGNETIC: THERE WILL BE SOME UNSETTLED PERIODS ON THE

15-17TH, 24-27TH FEB WITH AN ACTIVE PERIOD EXPECTED 9TH

AND 10TH MAR. BEST QUIET PERIODS 18TH-21ST FEB, 1ST-4TH MAR.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

THANKS FOR THIS INFO TO THE IPS RADIO AND SPACE SERVICE.

VK2SG RTTY DX NOTES FOR WEEK ENDING 9 FEBRUARY 1996.

Our information this week came from AA5AU G3ZYP DJ3IW and the

the Central Europe DX Cluster DB0SPC I5FLN and the IK5PWJ

Packetcluster SM0DJZ OH2BUA OH2LU W5KSI WB2CJL ZS5S and the

Minnesota DX Packetcluster Network. Thanks to all or the info.

ARRL DX NEWS BULLETIN NUMBER 089

FROM ARRL HQ NEWINGTON CT FEBRUARY 8, 1996.

TO ALL RADIO AMATEURS

THIS WEEKS BULLETIN WAS MADE POSSIBLE WITH INFO PROVIDED BY :

JOE NJ1Q, TEDD KB8NW, THE OPDX BULLETIN AND CONTEST CORAL FROM

QST. THANKS TO ALL.

KERMADEC DXPEDITION. UPDATE. PERMITS, LICENSES AND EQUIPMENT

HAVE BEEN OBTAINED. AT NEWS TIME, 18 OUT OF THE EXPECTED 20

POSSIBLE OPERATOR POSITIONS HAVE BEEN FILLED. THE VESSEL TO BE

USED WILL MAKE BRIEF STOPS AT CROZET AND KERGUELEN AND THE

TEAM MIGHT BE ABLE TO OPERATE FROM THESE ISLANDS.

HEARD ISLAND, VK0. A MAJOR DEVELOPMENT IN THIS OPERATION IS

THAT A SUITABLE VESSEL HAS BEEN SECURED, THE MARION DUFRENSNE.

THIS IS A NO-NONSENSE VESSEL WHICH CAN SAIL AND WORK UNDER WX

CONDITIONS IN THE POLAR REGIONS.

COCOS KEELING AND CHRISTMAS ISLAND. VK9CR/VK9XY. DL8WPX, DL7YY

DL3DXX AND DL7UFN ARE ACTIVE FROM CHRISTMAS ISLAND USING VK9XY

UNTIL FEB 12 AND AGAIN FEB 23 AND 24. OPERATIONS FROM COCOS

KEELING ISLAND WILL RUN FROM FEB 13 TO 22. THEY WILL OPERATE

CW AND SSB. ON 160 THRU 6 METRES AND SOME SATELLITE ACTIVITY

QSL VIA DK7NP.

NETHERLANDS ANTILLES PJ9. JACK W1WEF AND JOHN W1BIH/PJ9JT WILL

BE OPERATING THE ARRL DX CONTEST MULTI-SINGLE, USING THE CALL

PJ9C. QSL'S FOR THIS OPERATION GO TO K1CPJ.

ANGUILLA, VP2E. WILL, AA4NC, WILL SIGN VP2EN FEB 12 TO 20. HE

AND K14HN WILL BE IN THE ARRL DX CW CONTEST. QSL VIA AA4NCD

DIRECT W/SASE. STEWART , KC0ZC AS VP2ES, GLEN, WA0PUJ AS VP2EZ

AND LORING, NO2SU AS VP2E WILL OPERATE FEB 28 TO MAR 5. QSL TO

HOME CALLS.

MONTSERRAT VP2M. ART WA2UJH HAS HAD A CHANGE OF PLANS AND WILL

NOW OPERATE TILL FEB 21. HE WILL BE ON 160 THRU 10 METRES. QSL

VIA NW8F.

KUWAIT. 9K2. HAMAD, 9KWHN, REQUESTS ALL TO ONLY QSL VIA HAMAD

J. AL-NUSIF, PO BOX 29174, 13152, SAFAT, KUWAIT. OR VIA THE

BUREUA. HH2HM/F NO LONGER HANDLES CARDS FOR 9K2HN.

QSL INFO. W6JOX IS NOT REPEAT NOT MANAGER FOR HPWCWB OR CO2JA.

QSL HP2CWB VIA WT3B. QSL CO2JA DIRECT.

2628. learn cw software

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: hbcsc274@csun.edu
Message-ID: <4gbrsq$jmd@dewey.csun.edu>
Source record: 230392

I have written a program for DOS that will help amateurs learn cw, from
5 wpm to 40 wpm. If you would like a copy of this software, visit my
web page at http://www.csun.edu/~hbcsc274
Look in the Software section one you reach the page.

2629. Atlantic MM Net Info Please

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: kwalker@qb.island.net
Message-ID: <4gbtme$hlo@nash.qb.island.net>
Source record: 230393

I am not a regular reader of this group so I apologize in advance if this question was just answered yesterday!

I will be sailing from Scotland to Newfoundland in June via the Faroe Islands and Iceland. I would like to gather any information I can in advance about what maritime mobile nets run that I may be able to reach. Also any nets that deal with weather would be useful as well.

Please email any info to me direct.

Thanks.

The Laporte Cabin Fever Hamfest

Saturday, Feb. 24
8 A.M.- 2p.m.(Chicago time)
Laporte civic auditorium, Laporte,IN
Info and Reservatons: (219)362-1121
Table Charge: 5.00
Talk-in on: 146.610
Donation: $4.00 at the door
food-refreshments available

I have been to this fest before, it wasn't bad at all. It was not very big, but I found a few good buys the last time I went.

I hope this helps,
John

Excuse me, please, but I thought *radio communication and experimentation*,
if anything, is the "essence" of amateur radio. Selecting one mode and
exalting over it all others is nonsense. I suspect the prophecy ("CW
... always will be the essence of amateur radio") will be disproven
inside my lifetime, if not before my infant graduates from high
school.

Note the followup-to: line, please.

2632. WTB ICOM CW FILTER

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: flanders@znet.groupz.net
Message-ID: <4gbeq7$u56@news1.sunbelt.net>
Source record: 230446
Cross-posted to: rec.radio.amateur.equipment,rec.ham-radio.swap,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.swap

I want to buy a CW filter for my ICOM Ham Radio.

I need the FL52A (500Hz BW) for the 455KHz IF.

These fit several of the ICOM radios.

How much?

Jerry W4UKU flanders@groupz.net

2633. Are Ten-Tec Transverters Any Good?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: zaax@aol.com
Message-ID: <4gc401$iip@newsbf02.news.aol.com>
Source record: 230447

I would like to hear from anyone that has built a Tec-Tec 6 metre transverter.
How good is the receiver? Would you build on again? Any impressions would be most welcomed!

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station location becomes available.

I would like to extend the table to include the best five QSOs for each band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station location becomes available.

I would like to extend the table to include the best five QSOs for each band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

This is true. I've never made use of club stations, but I
have made use of various clubs' Field Day stations. :) I go
out to a FD site and spend a good 12 or so hours operating. :)

I would like to give away a couple years of old QST magazines. Covers 1979 to 1981 aprox. Free if you are local, otherwise pay shipping by UPS or US Mail book rate.

While I'm here I'd like to mention that I'm looking for a low end HF trancsceiver with receive capability from .5 MHz to 30 MHz so it can double as my short wave receiver.

From: dpmoore@west.net
Message-ID: <4gco5h$euh@daffy.sb.west.net>
Source record: 230454

Does anyone have a modification for the Yaesu FT-736R to allow operation in the 70cm band down to 420Mhz? I would appreciate any advice regarding this subject.
Please send response to: dpmoore@west.net
Thanks

I know of no math to do this but there is one way that I have used in an xBase dataset. Assuming that what you mean is that you want to sort on the area number and suffix first then the prefix you can put the prefix and the rest of the call in separate fields. That makes it easy. When you print the database out you can combine the two fields in one print area or just use a general print utility and leave a space showing between them.

If you're having trouble logging onto the oakland FTP site
they also have a WWW site.

The URL is

http://www.acs.oakland.edu/oak/SimTel/msdos/hamradio.html

Seems like a pretty good site. You can also check out their
Windows site but the msdos site seems to have more software. The
Windows site URL is

http://www.acs.oakland.edu/oak/SimTel/win3/hamradio.html

Yes, there is a regulated 13.8V supply at Radio Shack. It's not very
impressive but it will do what you want. (Regulation is not so great.)
An Astron would be a better investment but will be heavier.

>
>Does anyone know of a simple way of eliminating this interference?

The way is simple, but tedious, all you have to do is improve
shielding and filtering until the noise remains in the computer
and not in your radio.

It will be helpful to do a few tests to determine where the bulk
of the problem lies. That way you can attack the worst problems
first. The first step should be to disconnect the antenna from
your radio. If you still hear computer RFI, you have a problem
with the radio's shielding or power supply suppression. Fix
that first. With no antenna connected, you should hear nothing
but the internally generated noise of the radio.

Once you get the radio shielding and power supply suppression in
hand, reconnect the coax, but put a dummy load at the antenna end.
You should still hear no computer RFI in the radio. If you do,
junk the bad coax and replace it with better shielded coax.

Now hook the antenna back up. In many cases, computer RFI will
now be at a low enough level that you can stop. But if the problem
persists, a few tests of the computer are now in order.

First turn off the monitor. This is usually the worst offender.
If the RFI mostly goes away, you need to improve the shielding of
the monitor. Most computer monitors have essentially no shielding,
just a plastic case. There are a couple of ways to shield the plastic
case. One way is to line the case with a metal foil or screen. Another
is to use a conductive spray product, such as the one available from GC.
In either case, carefully cover the shielding with fish paper in any
area near high voltage to prevent flashovers.

If turning off the monitor didn't get rid of the RFI, try disconnecting
the video cable from the computer. If this makes a difference, the
cable probably isn't shielded. Replace it with one that is. You can
also use ferrite beads on the cable to reduce RFI. Also unplug any
serial or parallel cables. If these make a difference, make sure that
they are shielded cables, and use ferrite beads on them if necessary.

If you still have RFI, try disconnecting the keyboard and mouse.
There isn't a whole lot you can practically do about shielding

the keyboard and mouse. The best course here is to try other brands or models of keyboard and mouse in order to find units that have lower RFI. I like the Focus 2001 keyboards. They're pretty quiet, and have a good feel. You can try ferrites on the cables, but I haven't found that to be much help. You can also open up a keyboard and try sprinkling bypass capacitors liberally around the scan matrix. This can help, but can cause some keyboards, those working on the capacitive switch principle, to malfunction.

Finally, if you still have RFI with only the computer mainframe powered up and connected, you'll need to improve the case shield of the computer itself. Use standard VHF practices here, all seams must make metal to metal contact, sand off any paint on mating surfaces, and there should be a screw every 5 cm along a seam. Any ventilation openings should be covered by metal mesh. And the power cord should be fitted with an RFI filter. If, heaven forbid, the computer case is partially plastic, you can try the steps mentioned for shielding monitors, but a better course is probably to just replace the case with an all metal one.

Note well that I have made no mention of "grounding". In general it won't help, and it can make the problem worse. The solution to noise problems is to either suppress the noise at the source to prevent the RFI from being generated in the first place, or shield the offending equipment to prevent noise egress, or shield to prevent noise ingress. Some or all of these steps may be needed in stubborn cases, only one or two may be sufficient for less stubborn cases.

Christophe Marchal's Super Marathon

WE NEED YOUR HELP TO FIND CLASSES WHO WOULD MEET CHRISTOPHE WHEN HE ARRIVES IN YOUR COUNTRY THANKS

An educational project by Jean-Marc Dumont, English teacher at Lycee Gaston Febus High School, Orthez, France.

OBJECTIVES:

-To allow the pupils, through the use of Internet and the amateur radio station F6KGF,run by Gaston Febus' radio club, to follow the sporting exploits of Christophe Marchal, who will take part, in his wheelchair, in the Five Continents Marathon from 25 May to 16 June 1996.
-To bring together pupils and the handicapped
-To sensitize pupils to the possibility of surpassing oneself
-To make use of modern means of telecommunication
-To work with a desktop publishing package on writing in reaction to information on the Internet
-To allow our pupils to communicate with pupils in the countries Marchal passes through
-To introduce pupils to the wonderful world of Amateur Radio.

The classes

The whole school i.e. about 800 pupils aged 11-18, plus all the participating pupils in the countries Marchal passes through.

The subjects

This is a multi- and cross-disciplinary project; the majority of teachers from Gaston Febus are involved.

The schools involved

Lycee College Gaston Febus in Orthez, Tamalpais High School, Redwood High School and Drake High School in San Francisco, and several schools elsewhere in the USA, in Great Britain, Canada and Australia, all of which are linked by the Global Village project on the Internet.

Activation and Operation

As soon as Marchal arrives in a country, pupils from its schools will come to meet him and will communicate news by Internet or by amateur radio links if the Internet is not available. Pupils from Gaston Febus will then broadcast this news on news group pages (Global Village project), on their Web page on the Internet, on local radio, in the on-line press and in local newspapers, as well as to short-wave international radio stations - The

Voice of the Andes in Quito, Ecuador, Radio Australia International, Radio France International - either by Internet or by fax.

Project 'Amateur Radio Operator'

We will launch a National Appeal amongst amateur radio operators to help Marchal, himself a radio operator (F5TGY) to finance his project. The donations will be collected by the 'Association Basco-Bearnaise des Radioamateurs' in Pau, France. We shall work in partnership with the IDRE and the REF.

Activation and Operation

A national appeal will be launched to help Marchal to finance his project. Various partners will be sought.
An Amateur Radio Operator's Diploma will be created.
The Amateur Radio enthusiast Associations of the countries visited will be brought into the project.

The F5TGY 'Association Basco-Bearnaise des Radioamateurs' Contest

To obtain the Five Continents Supermarathon Diploma an amateur radio station will have to contact at least ten stations in the country where F5TGY happens to be at the time. This means, for example that a station contacted in the United States can oonly be valid for the diploma if Christophe Marchal is in the US on the day and at the time of the radio contact. Completed logs should be sent before 30 July 1996 to F5RKJ who is the QSL manager and judge of the contest. This contest will run from 25 May 08:00 UTC until 16 June 15:00 UTC. Each station contacted will count for one point, two points if this station is in the town where the marathon is taking place ON THAT DAY. In the log reports, the date and time (in universal time) of contact and the town and call sign of the correspondant must all be noted. The same station may only be contacted more than once if on a different band each time.

TIMETABLE OF EVENTS

Friday 24 May 1996: 09:00 Departure Paris - London
Saturday 25 May 09:00 Prologue 15km in a London park
15:00 Flight London - Los Angeles (12hr flight)
Monday 27 May 09:00 MARATHON - Los Angeles area
Thursday 30 May 22:30 Flight Los Angeles - Sydney (14hr flight)

: Lazy blighters! When I took it in 1967 it was a serious ESSAY test
: where you had to draw circuit diagrams etc.!

It's harder now, you have to be able to unscramble *their* circuit diagrams, then work out which answer *they* think is right when some questions give you a choice of several or none that are actually right :-)

I jest not

David

2650. Re: ARRL Bulletin Header, was ARLB011 Vanity calls delayed

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: WN4BBJ@gnn.com
Message-ID: <4gdih3$3jg@news-e2a.gnn.com>
Source record: 230464

>>experience. Not everyone has seen the bulletins many times
>>before.
>
>Who has not? Be real 99% have seen them before. Must it be repeated
>EVERY time?

YES. Otherwise, it is an anonymous bulletin. Maybe 90%+ of
the readers HERE have seen it every time, but this is a
distribution medium too, and the bulletins are sent to many
places from here. Some of the people who read or hear the
redistributed bulletin may be hearing it for the first time.

At the rate the Internet is growing, who knows what the
percentage of new readers are? Be real.

My local newspaper prints its name and city every day.
That may be redundant too, but there are new readers
every day who haven't seen it before. Identity is not
always obvious to everyone.

>
>Tell me what newspaper prints ARRL bulletins?

They don't use the bulletins verbatim, normally... they
are source material for an article. General interest bulletins,
such as SAREX announcements, have been used as parts of stories
in newspapers, especially if a local school is involved.
That was the case for a school about 50 miles from where
I live.

Other information of historical significance (museum openings,
inventor obits, etc.) have appeared in newspapers as a result
of the bulletin being sent to the paper.

Information about the national scope of Field day is sometimes
presented almost word-for-word from ARRL bulletins.

Propagation bulletins are generally not printed, nor are
DX bulletins, since they are directed towards a very
specific audience.

As for which newspapers, it depends on what newspapers you read.
Weeklies seem more prone to print the historically significant
information. Dailies print more event-oriented stuff.
Specialty newspapers such as the Wall Street Journal probably
won't focus on either.

They certainly won't print ANYTHING if you don't give it to them.

This also applies to newsletters and other ham magazines,
who reprint the bulletins, or selected information from them.
Only about 30% of the ham population is a member of ARRL,
so not all see this information in QST.

>>In short, the ARRL has provided a bulletin format which is
>>compatible with the Internet, Packet Radio, RTTY and press
>>releases without end-user intervention.
>
>They have used that "format" since time began.
>Cut the bull.

I doubt very seriously that Packet Radio information has
been included since time began. Internet certainly hasn't.

Nevertheless, you feel so strongly about it, so I suggest
you contact ARRL directly and register your complaint on
a regular basis. They are the only organization that
has the ability to change the headers. Or you could cut the
bull yourself and design a new format and suggest it to them.

>I am going to be the fox in a foxhunt here in Lexington, KY March the 3rd, and
>I am looking for suggestions on how I can be sneaky and throw my hunters off.

The worst I ever ran into was a fox that had a audio modulated signal on it that climbed and dropped from about 200 Hz to 2000 Hz in about 5 second cycles that also cycled the power output from 100 mw to 10 watts in a seemingly random method and speed.

Beware though, the hunters were so furious by the time they found the fox he barely escaped with his life. I simply got frustrated and left.

: If HF and the DX game is your desire, then you'll want to
: start with the Novice license, and work on your Morse Code
: speed so that you can move up to General as quickly as possible,
: and from there learn some theory to take you on to Advanced
: (you may never need Extra as it grants few extra privileges).
^^

I think I have to take issue with this statement. Yes, in terms
of actual spectrum, the Extra-only portions are pretty tiny slices.
But, on the other hand, that's sure where most of the DX is in this
period of low sunspots (except during the DX contest!). The extra
class lets you work the DX where the DX works most of the time.

I have no quarrel with anything else Gary says here; it's all right on
target.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 FEBRUARY AND FORECAST FOR 21 FEBRUARY - 23 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 19 Feb
Daily Proton Fluence >1 MeV: 1.4E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 6.1E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Feb 22 Feb 23 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Feb: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsetteled to quiet.

Estimated Indices : A K Observed A Index 19 Feb
Learmonth 9 3222 3222
Fredericksburg 7 7
Planetary 6 7

Observed Kp for 19 Feb: 2332 1012

2B. MAGNETIC FORECAST
Date Ap Conditions
21 Feb 5 Quiet
22 Feb 5 Quiet
23 Feb 5 Quiet
COMMENT: Quiet conditions expected next three days.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
20 Feb Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
21 Feb Normal Normal Normal
22 Feb Normal Normal Normal
23 Feb Normal Normal Normal
COMMENT: Good HF conditions expected next three days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
20 Feb 6

Observed Australian Regional MUFs:
Darwin: near normal until 05 UT after which no data.
Townsville: near normal after 15% depression at
0000 to 0100 UT. No data after 04 UT.
Sydney: Near normal with spread F observed during local
night from 1000 to 1900 UT.
Hobart: Near normal until 0400 UT after which no data.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
21 Feb 10 near predicted monthly values
22 Feb 10 near predicted monthly values
23 Feb 10 near predicted monthly values

It's also legal for Esperanto, a "non"-natural language.

Gary Coffman <gary@ke4zv.atl.ga.us> wrote:
: In article <311624EA.3AC2@kuai.se> Fredrik Hofgren <hofgren@kuai.se> writes:
: >
: >I wounder if anyone could help me out on the history of the Morse Code?
: >Some info on "language", "when" and "why".

: Morse Code is, as its name implies, a code, actually an encoding of
: the Roman alphabet, no different in concept from ASCII. It is not a
: language, though as with any alphabetic symbol set, it can be used to
: *spell* words in a natural language such as English.

: The Morse Code as we know it today is not the original Code invented
: by Samuel Finley Breese Morse in the period 1832 (concept) to 1844
: (demonstration before Congress with the famous message "What hath God
: wrought"). It is a modified code called the International Code that
: we actually use on radio. The difference is that the Morse code used
: dots, dashes, and *intracharacter spaces* while the International
: Code only uses dots and dashes to make up letters. For example, in
: Morse the letter C is .. . while in International Code it is the
: familiar -.-. instead.

: Morse's telegraph did not use a key to send. Instead it used a device
: called a *port rule*. And the Code was not received by ear. Instead it
: was written as a series of dots, dashes, and spaces on a moving strip of
: paper by a pen controlled by an electromagnet. In other words, Morse
: intended his Code to the *sight read* off a paper strip.

: Composing a port rule was like setting movable type. The operator
: would select the letters out of type boxes and assemble them onto
: the rule to spell out the message. The port rule was then drawn
: through the Morse transmitter which had a roller and switch which
: followed the characters on the port rule and turned the current
: on and off in a series of dots, dashes, and spaces corresponding
: to the text sent.

: Morse borrowed from the printing industry in devising his Code.
: He assigned the type box with the most frequently used letters
: the shortest dot-dash combinations, IE the letter E is used most
: in the English language, so Morse assigned a single dot to represent
: it, T is next with a single dash, A after that made up of dot dash,
: etc.

: For receiving, a strip of paper was moved past a pen controlled
: by an electromagnet. The strip was either hand cranked or moved

: by a clockwork mechanism depending on the particular telegraph.
: When the port rule closed the switch on the other end, the
: electromagnet would pull the pen into contact with the paper.
: Depending on how long the contact was closed there would be
: a short or long mark made on the moving paper. As the port
: rule was cranked through the Morse transmitter, a corresponding
: series of dots and dashes would be made on the paper strip of
: the receiver. The operator would then sight read the paper
: and transcribe it back to Roman characters on a message blank.

: With long messages, there was a lot of looking back and forth
: between the paper strip and the message blank as the message
: was transcribed. Some operators began to recognize characters
: just by the tapping sound the pen made, and started transcribing
: directly without waiting for the paper strip to emerge from
: the Morse receiver. Eventually the pen and paper strip were
: replaced with just an electromagnet pulling a *sounder* in
: and out of engagement, and Morse started to be copied by
: ear from the click-clack sounds coming from the sounder.

: Similarly, the port rule took time to assemble for each message,
: and telegraphers learned that they could simulate its effects
: by manually working the switch, and the key was born.

: Thomas Edison was a telegrapher as a young man, but due to growing
: deafness he couldn't hear the click-clack of the sounder, so he
: invented the *ticker tape* machine. This was in some ways a throwback
: to Morse's original telegraph in that a moving strip of paper was used
: to transcribe the message. The difference was that Edison devised a
: new *uniform* machine code, and a code reader that actually printed Roman
: alphabetics on the paper strip instead of dots, dashes, and spaces.
: Anyone who could read could use the ticker tape. It was in essence
: the first teletype machine. Edison envisioned one in every home.
: Unfortunately for Edison, there was this other fellow named Alexander
: Graham Bell who invented a talking machine so that anyone who could
: talk could use it, and that became the standard device in the home
: instead.

: And now you know... the rest of the story.

Just last week, on 160mtr "Continuous Whistle" I worked a VE7 station, whose location is a remote island off the coast of BC. He lives in a lumber jack community / fishing town. His life-style is alot different than mine. I enjoyed hearing about how the town "turns out" when the supply ship comes in - and they make a big "to-do" over it. How he had a grizzly come by and knock his front door down. How he gets around with a snow-mobile. He was interested in my work doing wild-life rehabilitation, and my pet Coyotes. Also that I am next to the Palomar Observatory. And although I don't have grizzlies, I did have a mountain lion dangling from my tree last summer - one of the young-guns from the "old lady" that lives in the valley behind my ranch. Musta found herself a beau last spring...

The only "radio talk" was about antennas: I have a Rhombic strung in my oak trees. He has a 1/2 mile of wire strung in his pines.

Ho-hummm... boring...

Maybe to you, but I found it interesting. He lives an existence as no one else I have met. The QSO lasted 1 1/2 hours.

73,
tony

I am a Ham operator Advanced class. KI5GY, first licensed in 1973.
I have in my car a 2 meter, a Ten-Tec Scout on 80, 40, 20 and 17, and
Cobra CB.

I drive several hundred miles a week, and listen to all 3 radios.

In the late 80's the CB was unbearable, the 2 meter OK, and then 10
meter was good (I didn't have 80 mobile then). Now, 80 meters is as
bad or worse than 11 meters is or ever was, and these are hams who must
have morse code at 13 wpm or better. They are licensed, but sickening
to listen to, hate and racism, foul language, too much power, all the
things I heard were wrong in 11m.

2 meter has gotten fairly clickish, but I have a group in most cities
I talk to. But now quite a bit of my time is listening to the CB and
occasionally talking some. I find it more pleasant than 80m or 20m.
40m is still OK, and 17 is wonderful when it's active.

I learned more about mobile installations and coax connectors from a CB
enthusiast than I have ever from a HAM. I know a local Extra Class ham
who has a friend come over to make a jumper coax for an SWR meter.
Nether group has a lock on knowledge or technology. I for one like
mobile, and restoring old gear, so I have all new gear in the car,
except for the CB vintage 1980, and old Collins and Drake gear in the
house. I get along with both groups, the homebrewers and the appliance
operators. I know guys who can get Worked all States awards, I don't
have a clue how to do that, and I respect him for his accomplisments, I
have another friend who can fix anything, and has designed and built
most of his equipment, I respect him for that, but generally he has no
respect for appliance operators and they could care less about
designing a spectrum analyzer. I really don't see why there should be
a rift between the two groups, or the Ham and CB group. I enjoy both,
as well as the usegroups of both. I don't usually respond to these
type of threads, but I have become sick of the mess on 80/75 meters and
really feel it is no better than anything on 11 meters now. Any of you
hams, listen to 75, then listen to 11, read the letters in the March 96
QST, complaining aboput 75m, read all the trash in the usegroups, and
make your own decisions.

There are a good and bad in both groups. Most of the people in both
groups are into the hobby for one reason, they like to talk to other
people.

My favorite story was several Hams on 2 meter discussing how silly
CB'ers were to think a tennis ball on their whip would help them get

out better. I asked them how they kept their whips from striking the sides of their vehicles when they went over bumps, there was dead silence and finally one of them stated they guessed maybe that was the reason for the tennis ball. They were so dense they couldn't even figure out why the tennis ball was on the whip, it took a CB'er or probably a farmer to figure out a clean cheap way to solve the problem.

Anyway I don't see cb'ers bashing each other in this conference like I see the hams at each other's throats in the ham conferences. I guess some of the hams can't see a conference without some wasted bandwidth so they have to come over here to make trouble.

On the other side of the coin there is:

60 ft tower + 1500 Watts + $1200 radio = NO BRAINS

I am a technician and like building my own kit/antennas. I will be much more satisfied with a Worked All States from my own equipment then if I dropped $10,000 for a setup. I was talking with someone just like this on the air. The first thing that they said was, technician huh!, well you can upgrade!! then they proceeded to state that they could not talk because they were DX'ing Africa. Well how much brains does it take to DX anything with that setup.

> hold this childs toy morse code thing over my head. Gimme a
> break man!!! That CRAP IS DEAD!!!!! It serves NO PURPOSE!!!!!
> Don't even try and argue with that - YOU WILL GET WAXED TOO!!!!

To be honest, I don't even know what the term "WAXED" means. I'll assume
that it means you'll try to buff us with your "Brilliance". I don't
personally know you, so I'll take you at written value and assume you are
what you posted about yourself. so there will be no debating how much
"better" your "electronics knowledge" is over mine, which BTW appears to
be quite a bit:-)

> for home and another for the car, hook up some TA's and have
> a roving data terminal, NATIONWIDE!!!!! One thing that will never stop
> me is MORSE CODE!!!!!!!

It would appear to me that your missing the point. amatuer radio is not
just about "Promoting Technology" or being "Up to date with Technology"
Its about the interest in, and knowledge of, radio communications in
general.
Lets face it, as an amatuer, "HAM", operator, your taking on a
responsibility when you receive that license. Part of that responsibility
is "Promoting Radio communications" through advancements in radio (theory,
practical applications), Public relations, etc. As you progress through
the ranks of the amatuer service, your taking on additional responsibilty
with each license level. Part of that additional responsibility is
knowing additional methods of providing communications, and while it may
be outdated, Morse Code is still a valid and basic form of communication.

To date I still haven't seen a valid argument for dropping Morse Code
completly. Because "It's outdated", isn't really a valid arguement, just
a cop-out. I personaly would like to see the Code speed dropped to 13
words/minute for the Advanced and Extra, 7 words/min for technican
+/General class licenses.

ARLB012 SM election results

Ballots have been counted in Section Manager elections in the
Eastern Pennsylvania, Louisiana, North Carolina and San Diego
sections. Terms of office begin April 1, 1996. The results are as
follows.

In Eastern Pennsylvania,
Allen R. Breiner, Sr., W3TI, 789
Bob Josuweit, WA3PZO, 702
Breiner was declared elected

In Louisiana,
Frank C. Morris, N5YZM, 196
Lionel A. Oubre, K5DPG 377
Oubre was declared elected

In North Carolina,
Carl E. Smith, N4AA, 709
Reed Whitten, AB4W, 916
Whitten was declared elected

In San Diego,
Patrick C. Bunsold, WA6MHZ, 477
Tuck Miller, KC6ZEC, 269
Bunsold was declared elected

Five other SM positions were not contested. The following were
declared elected.

In Eastern New York
Paul Vydareny, WB2VUK

In the Pacific section
Dean Manley, KH6B

Your point being???

I commend the amatuer operators for being so darned
> helpful. The flipside of the situation is that the number of people
> becoming interested in the old hobby is at an all time low.

Possibility a valid point, however I think if you view the population
statics, and compare the percentages , you'll see that it's pretty much
stayed at an even keel. That is IMO, of course.

In my
> opinion, most types of people today who might become interested
> in radio are very quickly choosing computers instead, and for many
> reasons. The rate of technical progress for radio is at a snails pace
> compared to computers.

This is a valid point, with the internet being open to all kinds of people
with computers, this is what made computers popular for more than just
"Word Processing", not the technicial speed of growth. Now I'm involving
Everybody, not just the "brains" or those who hold "engineering degrees".
Besides while the radio spectrum is taking a backseat to computers, the
money is currently in computers, not radio anymore, hence where the money
is, is where the most development is, and the most activity.

>Computers require no license at all.

Look at the internet, CB'ers (in General, not all) and see how they turned out. Once ISP's (aol,compuserve, etc) gained access to the internet, the quality of communications dropped quite a bit. Look at the hacking, the "spaming", etc..
As for CB'ers, well I was one for better than 11 years, the intentional interfearence, vulgar language, drove me to remove it from my car and sell it. I recently turned on my old CB radio (I sold it to a friend) and wasn't the least bit suprised that nothing had changed. Even the sidebands channels were full of the same problems that plagued the AM side. Made me glad I got rid of it in the first place. Now this is my area, mileage will vary.

I think
> that one of the problems here is that most of the old ham radio
> people (the ones who are still interested) fall into one of 2 classes:

>
> At this point in time it might be best if the F.C.C. started thinking about
> alternative uses for the many bands that are assigned for amatuer usage.
> These bands are currently under utilized

This is partly because some of those who have the advanced college degrees don't feel that it's worth their time/or effort to get a license, and then play around in the radio spectrum.

and would be
> more useful if they were assigned to another purpose.
>
> As an alternative, the government should then assign some bands for
> general civilian use

This was done with the CB Bands, and as the population grew and "mass marketers" made radios cheap and readly available, and the FCC removed the licensing requirements altogether, look at what happened.

>and then require every radio to have a sub carrier
> digital encoder that identifies the radio so that any person causing
> problems could be identified and fined. Needless to say, some people
> would just remove the encoder,

> so maybe it's not really possible to
> regulate radio use.....

BINGO, I think he's got it.
>
> Just some thoughts and ramblings.....

Keep it coming, gives us something to discuss, and to sometimes point out the common misconceptions floating around.

2680. Missing Spectrum???

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-20 00:00:00 UTC
From: rayc@tcd.net
Message-ID: <N.022096.154707.78@tcd.net>
Source record: 230494

I may well be OTL (out to lunch) but having worked in telecom &
electronics for many years I have always wondered "where's all the
missing spectrum???" Check it out. Most comprehensive EM
spectrum charts go from DC to abt 300 gHz, stop (BIG GAP!) then
continue at 30 micrometers and on up to cosmic rays... what
happens in the gap??? no sensors, no transmitters? or just none
that we currently know of??? Looks, by my admittedly poor,
calculations that nearly half of the EM spectrum is unaccounted
for... is this where the space aliens communicate with cows etc.?;-) where PSI
stuff happens |-)??? Anybody Know (or care?) can the FCC sell
it???

Hello all and thanks for reading this. I am trying to get return QSL cards from three amateur stations. Each station I have sent my QSL card along with a SASE and they have not had the courtesy to send a reply! If anyone knows these hams, please contact them for me and request that they mail a QSL to me. Or, if you have an Email address for them, please Email me back with their Email address. Any and all help is appreciated. The stations are:
WA6TBO - Kent Tiburski - Vista, CA
N0YNP - Jeanne Weber - Mitchell, NE
N7ANL - Richard - Kootenai, ID

73, and thanks for any and all help!
Darryl KE6IHA

Hi Gerry:

Are you a member of HANDI-HAMS? They offer an equipment purchase program
for handicapped members. Not sure if they have a dual band mobile rig in
inventory now, but it's possible... Pat Tice, WA0TDA, is the manager of
the organization and handles equipment purchases. You can e-mail him at
handiham@mtn.org.

If you have WWW access, there is a HANDI-HAM website which provides
comprehensive information:
http://www.mtn.org/~handiham/

Best regards,

Bobby Edward WB5MJK

>setup.

How much brains does it take to DX with a four watt CB? I didn't
think any, in fact its more luck than anything. Sure, you might get
into propagation patterns, and predicting good DX times but my
experience shows that CB'ers and most hams don't. They just wait for
the skip to roll in and start jamming up the band with nonsense.

How 'bout it DX land, anyone out in DX land got a copy on IMAGENIUS
in the sunflower state, break, break, break!

Now, that is intelligence. What's worse is that most CB'ers don't
give others a chance to work a station, they just keep repeating over
and over the DX call until someone finally answers back.

I don't understand why there is such a war between Amateur operators
and CB operators. Isn't the hobby the same? Don't we all want that
distant contact? This fighting is ignorant. I talk on both, and have
a great time.

>unconnected parts. I could try the doors and rear gate .

Properly setup VW's are generally pretty good in this respect.
I suggest you check three things: distributor rotor, spark plug
connectors, and your antenna cable.

Use only OEM Bosch rotors and spark plug connectors. The rotor should
have about 5K Ohms built into it and the spark plug connectors should
have about 1.4 K Ohms. Cheap replacements lack the resistive elements
that damp the oscillations in the spark.

Check your antenna cable to verify that its shield is continuous to
the body of the car. You must unplug the cable from the radio to
check this. It is common for the cable to become disconnected
(corrosion, I assume) from the body at the base of the antenna.

Hope this helps.

Hi,
Hate to be cold but, if you have it properly grounded, then shielding is another think to look at. 'CLONEs' aren't always created equal. They had to save cost someplace.
Jim

2691. Radio Database Program LW, MW, SW coverage for YOU.....

FRIENDS,

If you would like a free copy of a radio database program that covers longwave, mediumwave, and shortwave with at least 4,000 of records, send your NAME, POSTAL ADDRESS, and EMAIL address to chuck@flinet, and I will return the program to you via EMAIL.

The program is not up to date! It is a program used during 1994 and hasn't be updated since. However, many of the records are still current for stations that do not change every quarter.

The program is good until June 6, 1996. After that it will not function.

Hope to hear from you and don't forget your Postal Address for registration and future information via mail..

All addresses will be kept confidential!

Chuck

Good luck on your foxhunt. I enjoy being the fox, to make it harder
to find you try: hiding in a low spot, your signal does funny
things when it leaves the low area. Maybe under a water tower..
If you can find a road behind a large park or large area that
everyone will have to go around. Look for a bridge out.. and be
on the other side waveing at them when they have to backtrack
and find a new route..drop me a note if you need more suggestions.

Hi Wally,
I did one last summer that still has 'em buzzing! I pulled into a public parking garage at about the 4th level. It was one of those that has about a 6'8" clearance, no the ones with exotic arrays mounted on rooftops weren't too excited about skulking around there. Most of the previous hunts had been 'out in the county'. A little 'urban guerrilla' hunting will drive the most avid hunter nuts. We have a 2 hour hunt limit, and actually nobody found us in the alloted time. Of course you are going to want to vary your power, etc. For the initial contact to the hunters, we used a 4 element beam hanging out of one of the ventilation openings. It was pretty nasty, but probably more realistic than sitting in an air conditioned truck out in a corn field!
Have fun
WD9AHF
P.S. the idea came from KB9IHS my 13yr son.

In international waters, the rules of that country apply, where the boat is registered.

In territorial waters, the rules of the appropriate country will apply. Within Europe however, you just need one reciprocal license, and I guess either Austria or Germany are the swiftest to obtain one. I dont recall what these licenses are called, but since the early eighties, for example, you can go with a German lic into most other European countries without having to apply for some reciprocal license, you just add the appropriate lic-class-country-prefix with a / to your call, and that's it.

Check with some European hams in a QSO.

Message-ID: <1996Feb21.102416.114488@kuhub.cc.ukans.edu>
Source record: 230329

HAMMARLUND MINIATURE AIR VARIABLE CAPACITORS

::::::::::::::::::::

TYPE APC

Compact, hi-quality variables. Isolantite base. Screwdriver
or hex-wrench adjust.

APC-25 3.0 - 25 mmf 10 available
APC-140 6.7 - 140 mmf 3 "

TYPE MAPC

Midget padding, trimming and general purpose capacitors similar
type APC but smaller. Ideal for small space applications. Gap
.0135 inch. Rotors and stators are nickle-plated brass.
Nickle-plated beryllium copper wiper contact. Tapped (4-40
thread) brass studs in Steatite base permit mounting without
grounding rotor. Tested at 600 volts rms, 60 cps. Slotted
shafts for screwdriver or hex wrench.

MAPC-75 3.9 - 75 mmf 7 available
MAPC-25 2.6 - 25 mmf 18 "

TYPE ???

Identical in size and shape to the type APC, but have military
part number. Rotors and stators are silver plated (tarnished).
Please note that capacitance ranges and values for this
particular group are APPROXIMATE, subject to the accuracy
of my RLC tester.

922-0004-00 2.5 - 30 mmf 10 available
CA-290 3.5 - 60 mmf 8 "

::::::::::::::::::::::

Would anyone out there care to make an offer on these little jewels?

What's about 12m (i.e.: 24960MHz) too?

Approx. each day I am monitoring 12m and CQ-ing on 24954 at several
times during the day. Many, many times I don't hear any station on 12m
and many, many times I don't get any response to my CQ-ing. But I remember
some remarkable DX-QSO's with HAM's who "accidently" had tuned over the
12m band and heard me CQ-ing. :->)

2721. Re: Drawing Schematic Diagrams on FCC Exams

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-21 00:00:00 UTC
From: Vincent Biancomano <v.biancomano@ieee.org>
Message-ID: <4gg3u5$470@zeus.ieee.org>
Source record: 230334

One should check QST to confirm, but I believe drawing of schematics ceased in the mid 70's. Up until then, 10 of the 100 questions (Extra Class) required the drawing of both schematics and block diagrams. The drawing of schematics had been required at the "lower" classes as well, notably Technician Class. In 1956, the Technician Class license was a moderately difficult exam for a non-engineer, and even a good technician, since the exam stressed practical knowledge of circuitry, even into the VHF region. Thus, schematic drawing was required. The drawing of schematics for Technician Class, however, was dropped in the 60s, I believe, and well before the requirement was scrapped for Extra Class. Whatever the dates, it's easy to check out: all one needs are dated copies of the ARRL License Manual.

The 100-question exam structure was also reduced to 50 in the mid 1970s. The "nature" of the questions changed as well, moving slowly away from the hard-nails technical approach. By 1980 or so, the Dick Bash era had arrived, in which the exact questions and answers to exams were first published. We've come a long way.

Regards,
Vince, WB2EZG

2722. Death Valley Coverage?

Newsgroup: rec.radio.amateur.misc

From: obrien@Aero.org
Message-ID: <4gg2b2$od0@news.aero.org>
Source record: 230335

I just got back from a trip to Death Valley and as near as I could tell, the place is indeed dead, dead, dead, at least as far as ham radio is concerned. In three days of off-and-on scanning, I heard one burst of packet and that was _it_.

I heard that there used to be a remote base on Rogers Peak that was tied in to Cactus - Cactus certainly has nothing listed there now. The Southern California Repeater Directory doesn't show anything, nor does the ARRL Repeater Directory, at least, not on any mountain whose name I recognize.

Does anyone know of a repeater that covers Death Valley and the Panamint?

In our county, I have seen some stickers "NEED HELP - CALL YOUR SHERIFF". This might seem a bit farfetched for your problem, but think of it. Those guys drive in cars, and they are radio equipped. Just call your local office and ask your way through to the guy in charge for maintaining the cars. That guy should know all the tricks about grounding. And chances are, it might be a ham, too :)

At least, it wont hurt to try it that way.

1. Stay away from flat terrain.
2. Put your back to a hill.
3. Aim your beam at a tall building a few miles away (or power line, or
ridge across the valley from you, or ....)

Those are presuming that you need to "visible" and accessable by vehicle.

Now, if the end game is on foot: Mount the antenna on a chain link fence
behind a bunch of bushes and bury everything else.

the worst fox i have seen sat on top of one hill and aimed a beam across
the valley at a higher peak. the signal reflected very nicely off the
higher peak while the side of the hill shielded him from the valley. we
would start up the higher side and then the signal would come from the
opposite direction. when we went that way it would fade out and seem to
be coming from the higher peak again.

SB DX ARL ARLD011
ARLD011 Awards committee vote

The ARRL Awards Committee met recently to review submitted documentation for the 1992-93 P5RS7 operation submitted by Romeo Stepanenko. After a review of all material available, the Awards Committee voted unanimously to disqualify Romeo Stepanenko from participation in the DXCC program.

This disqualification is based upon Rule 12, Operations Ethics, and Rule 13. The disqualification means that Stepanenko is not eligible to participate in the DXCC program in any manner. This includes, as provided for under Rule 12, paragraph (b) disallowance of contacts made with any station or DXpedition operated by him from the time of this action.

|> Does anyone have a modification for the Yaesu FT-736R to allow operation in
|> the 70cm band down to 420Mhz? I would appreciate any advice regarding this
|> subject.

An error in the firmware of the radio allows operation down to
420 MHz with no hardware modifications.

Turn to a satellite VFO. Manually key in a frequency in the range
420-430 MHz. It'll work. You can tune, too, as long as you tune upwards.
Any attempt to tune downwards will trigger the boundary check and the frequency
will instantly jump to 430.000 MHz.

You sure hit the nail on the head, Eric!

The true definition of a ham is:

"A lonely, pathetic wretch -- sitting in a corner somewhere,
tuning around on his radio, desperately trying to be important".

I've been a ham for over 30 years and have observed it all. I
got the above definition about 10 years ago from a non-ham. I
tried to argue the point several times over a period of several
weeks -- but to no avail. I finally realized he was right.

Incidentally, he is now a ham; but I'm sure he is not pathetic
as are most of them.

Thanks for your truth.

While I do agree with much of what Burt Fisher wrote about mindless QSO's
and I do appreciate the points made in the rebuttals concerning hams helping
in various natural disasters, I would like to point out that "public sevice"
means more than earthquakes. Examples:

1. Last Christmas VE5SC pretended to be Santa Claus and Regina area
hams donated their time so that young children could have
a conversation with "St. Nick".

2. Last fall many hams helped to co-ordinate the Grey Cup (Canada's
Superbowl) which took place in Regina.

3. There were also hams at the Saskatoon Santa Claus Day parade.

These people all donated their time, not because there was a disaster and
they got "excited" just thinking what a hero they could be, but because
others needed their services and they could help out. And they didn't do
their service for the glory because there was none. Unless one was already
involved with ham radio (or involved in organizing the event) one would not
have even known that hams were there.

Brian.

Clay, you have obviously studied the subject very thoroughly.
I think you're right. I'm also not surprised that the salesman
didn't know what you were talking about.

I am somewhat like your friend who doesn't believe in filters;
but, rather, uses his ear. I happen to be a barbershop quartet
singer. That is the epitomy of nit-picking over cycles-per-
second. My ear can just tune in on about any frequency I want to.

Most people have a range of sounds that suits them best. Some
are lower -- some are higher. It will be interesting to see the
answers to your question.

Thank you.

Jack VE3EED/W7

P.S. I'm a bass. I like your lower notes.

How about this one-

100 ft tower + 1500 watts + $3000 radio = who the fuck COULDN'T get a WAS
or a DXCC on 40 or 80 meters.

Me, a no-code tech, I'll have the bragging rights when I get my VUCC and
WAS ALL ON VHF/UHF!!!! It can be done. This will be done probably with
less than 500 watts mostly on 6m with my goddam hombrew 6m dipole.

Goddam code-knowing egotistical bastards!

Gary:

With all due respect I think you are missing the point of what I am trying to say. Ham radio started long before FCC regulations turning it into a service. Now don't worry, I am not going to purposely bore you with a history lesson. Suffice it to say that as far as I can tell ham radio started because people wanted to experiment with radio.

If I am understanding you correctly we do agree on one thing: that is when people find something good the government finds some way to pervert it; hence the service part of the FCC regulations. Note: we have similar regulations in Canada where each ham is a servant of H. M. the Queen.

Thus I separate Ham radio from "Amateur Radio Service". In some ways amateur radio service is a tax we pay for being hams. Perhaps if we did not have and official "bureaucratic" raison d'etre we would lose even more of our bands to commercial interests. (History lesson ~2 (yawn): If I am not mistaken amateurs used to have all the bands above 200 kHz because they were considered useless.)

My original point was that ham should not be solely about "the biggest", "the farthest", "the fanciest" etc. For me it is about learning about how radio works. Perhaps if electronics were my formal training or my profession I would have less interested in building radios because it would seem like work. My training is in computers and because of this I am not terribly interested in packet at the moment ;-)

In reading your earlier comments and some of your other posts I must admit I am not quite sure why you got into ham radio. But I would be interested in finding out. I don't think I personally would enjoy the army. If my ham radio license ever begins to make me feel like I am in the army I will probably give it up in exchange for other means of communication, although by then the internet might just be another part of Bill G.'s empire ;-)

In regards to the government imposed service part of ham radio, I do not mind
helping others. Although I am disappointed that governments have made it
a requirement, it is something I would be willing to do anyway. I am
sure others may differ in their opinions about these regulations.

Brian.

2743. GB2RS News 25th February 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-22 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <825041155snx@llondel.demon.co.uk>
Source record: 230164
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 25th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners. And a special greeting to all Guides and Brownies taking part in Thinking Day on the Air.

The annual Guides Thinking Day On The Air is taking place this weekend, the 24th and 25th of February. At least 130 stations using GB callsigns and GX and other club special prefixes are representing Guides and Brownies' groups all over the country. For example, GB2CFG, representing Chandlers Ford Guides, is being operated by the Itchen Valley Amateur Radio Society from the Chandlers Ford Guide Headquarters in Hursley Road.

The RSGB London Amateur Radio and Computer Show will take place at the Lee Valley Leisure Centre at Edmonton in London on the 9th and 10th of March. The event features a very large number of traders, lectures, a bring and buy stand, the RSGB bookstall and a membership information stand, RSGB Morse tests on demand and much more. This year for the first time the event also features a Vintage Sound and Vision Fair. The official show guide is published in the March edition of Radio Communication, which has been posted to all RSGB members this week.

A new GB2CW Slow Morse practice transmission is now being broadcast at 8.15pm on Sundays on 1850kHz. The transmission is from the North Cheshire Radio Club, operated by Gordon Adams, G3LEQ, and should give nationwide coverage. There has also been a small change to the 80 and 6 metre GB2CW transmissions from G3LEQ. These are now broadcast at 9.45am on Sundays on 3640kHz and 51.530MHz. Reports on any of the GB2CW transmissions are welcomed by the operators. Please let them know what your Morse speed requirements are and whether the practice sessions are useful. You can contact the individual operators directly, or alternatively write to the co-ordinator, David Pratt, G4DMP. His address is 11 Moorleigh Close, Kippax, Leeds, and the postcode is LS25 7PB.

Now a note for your diary: the date of the RSGB Regional Open Forum Meeting at Witham in Essex has now been set for Sunday the 26th of May. Details of the meeting are on page 11 of the March RadCom, but the date of the meeting wasn't available as we went to press. Further details can be obtained from Fred Stewart, G0CSF, whose address is correct in the RSGB Call Book.

Another VHF Round Table will be held at the BT Laboratories, Martlesham Heath, near Ipswich in Suffolk on Sunday the 31st of March. The event will include round table sessions and seminars, testing facilities and a bring and buy stand. For BT Labs' security reasons, all access is by

advance booking only. For tickets, send a list of the names of all persons attending along with a stamped, self-addressed envelope to Roy Smith, G0RRC, whose address is correct in the RSGB Call Book.

Now a request for radio operators in Somerset. On Sunday the 24th of March exercise "Parish Contact" will attempt to establish communications between radio operators in Somerset's parishes and six Local Authority Emergency Centres staffed by members of Raynet. Significantly more radio operators are needed to cover the large rural areas which might be cut off in a major disaster. The exercise will take place on 2 metres FM and on CB radio. Further information can be obtained from Bill Lawrence or Jim Butterworth on 01 823 255 531.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From the British Virgin Islands, KK9A will sign VP2V/KK9A from the 25th of February until next Tuesday, the 5th of March. Activity will emphasise 80 and 160 metres.

From the Cayman Islands - Zulu Foxtrot - four American operators are active from Thursday the 29th of February until the 4th of March, from 160 to 6 metres.

And from Chad, Frank Turek DL7FT was planning activity as TT8FT from now until the 9th of March. He will use CW and SSB on all bands, including 160 metres.

Next the Rally News:

The Barry Mobile Rally is taking place at Barry Leisure Centre today, Sunday the 25th of February. Doors open at 10.30 am, or 10.00 am for disabled visitors.

Also today, the 25th, the Taw and Torridge Rally takes place at the Bideford Centre on the Quay at Bideford in Devon. Doors open at 10.15am.

On Saturday, the 2nd of March, the West Wales Amateur Radio and Computer Rally will take place at its new venue - Penparcau School, Aberystwyth. For details call 01 545 580675.

Now for the HF contest news:

The Belgian UBA CW contest is taking place this weekend. It started at 1300 on Saturday the 24th of February and runs for 24 hours.

The French REF SSB contest is also taking place this weekend. It started at 0600 on the 24th and continues until 1800 on the 25th. Brief rules for both of these contests are on page 23 of the February RadCom.

Next weekend, the 2nd and 3rd of March, the ARRL International DX SSB Contest takes place. The contest starts at 0000UTC on Saturday and runs for 48 hours. Work USA and Canadian stations only on all bands from 160 to 10 metres - excluding the WARC bands - and send an RS report plus

your power. USA and Canadian stations will send a report and their state or province. Brief rules can be found on page 22 of the February RadCom.

Next some VHF contest news:

The fourth out of five sessions in the RSGB 70 MHz Cumulative Contests is taking place today, the 25th of February, between 10 and 1200UTC. The final session will take place on Sunday the 10th of March and the rules can be found in last September's RadCom.

Next weekend, the 2nd and 3rd of March, the RSGB March 144 and 432 MHz Contest takes place. It runs for 24 hours from 1400 UTC on Saturday, and the rules can be found in the September 95 RadCom.

And before the solar factual data, a reminder that an explanation of the solar and geophysical terms used in this broadcast can be found on page 94 of the current RSGB Call Book. For visually handicapped listeners, a copy of the Guide to Propagation Terms on specially tinted paper is available from the Propagation Studies Committee. Contact the Chairman, Professor Martin Harrison, G3USF on 01782 627396 for details. For those requiring this Guide in Braille, the Radio Amateur Invalid and Blind Club are able to supply a copy. Contact Margery Hey on 01953 454920 for details.

And now the solar factual data compiled by Neil Clarke, G0CAS.

The period from the 12th to the 18th of February saw solar activity at very low levels and the geomagnetic field at "quiet to unsettled" levels. The solar disc remained spotless and featureless except on the 15th, when one small spot appeared and then disappeared again the same day. The mean for the period was 6. Solar flux levels increased slightly from 69 to 71, with an average of 70 units. No solar flares were reported. Electron fluence increased from moderate to high levels on the 13th, but then declined to a moderate level on the 16th. X-Ray flux levels remained at its minimum level of A1 every day. The 90-day solar flux average on the 18th was 73 units, the same level as last week.

Geomagnetic activity started the period at "unsettled" levels but by the 15th declined to "quiet", with an average of Ap 10 units. The aa indices, as supplied by the British Geological Survey for the period from the 6th to the 12th of February, saw activity increase from "quiet" levels, with 9 nanoTeslas on the 6th, to just "sub-storm" levels with 42 nanoTeslas by the 11th. Levels then declined on the 12 and the average was 20.8 nanoTeslas, which is just K3.

I'll repeat the figures: spots - 6, flux - 70, Ap index - 10, X-Ray flux - A1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 9th to the 15th of February, saw levels improve from 5.8MHz on the 9th and 10th, to 6.4MHz by the 15th. The average was

6.0MHz. The darkness hour lows increased slightly from 2.4MHz on the 9th, to 2.8MHz by the 11th. Levels then declined to 2.1MHz on the 13th and the average was 2.4MHz. The daytime highs took place between 1100 and 1600 hours, with the darkness hour lows at 0600 hours every day except on the 11th, when it was at 2100.

I'll repeat the figures: highs - 6.0MHz, lows - 2.4MHz.

And lastly the solar forecast.

As reported last week, the sun has declined in all forms of activity. On the last solar rotation, the slightly more active side of the sun was looking our way, but the sun spots were declining. Therefore this week solar activity looks set to continue at very low levels, with solar flux levels about the mid 70s. Geomagnetic activity is expected to be "unsettled" for the next couple of days and then decline to "quiet" levels for the remainder of the week. Ionospheric MUFs for the south during daylight hours are expected to be about 17MHz, and the darkness hour lows about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky X-Ray and G7 Whisky Hotel series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Uniform series.

Fox hunting, or DFing, is popular here in Columbus too. We have one every
month, and I have a jeep that I can take the top off, and have added a
mast support to hold a 7ft, 1.25 mast with a 4 element gamma Yagi on it. I
also built an variable attenuator which works great...I do very well at it.

I also built a "fox box". It consists of a small circut board with an EPROM,
555 counter, and a PTT circut. With my Alinco DJ-162 (with no battery), and
a 7.0 amp hour gel cell, it all fits very nicely into a small ammo box. The
box is water-tight, green, and has a sealed home-built 1/4 wave antenna built
in.

Its pretty fun sitting in your car, watching the guys run up to your car with
a big smile thinking they have found you, only to say "You have to find the
transmitter!" which by the way, you have stuffed in a bush about an 1/8 mile
away that you can see in your side view mirror...heh heh.

Ive got other neat tricks and traps that I will share about DFing later.

Take care all.

Roland S Geter PhD <roland@mycronet.com> wrote:

There are really two software packages that I use and find very
fantastic.

KENTROL is a really great transceiver controlling software package
that
currently does not have logging but will presently. Get it at
brian@synapse.net.

LOGICW is my other favorite that has both routine logging for awards
and
very sophisticated contest logging software. If connected to various
transceivers thru computer port you don't even have to enter the start
or
end time of QSO, frequency, mode, ect. It even has a CD-ROM interface

for only $48 that automatically looks up the callsign and enter the
contacts name, address, etc. subsequently automatically printing QSL
cards. Really to much to mention here. Get if from pda@hosenose.com.

Both packages are WINDOWS platform and as I have used them for uit a
while with the LOGICW being my favorite because Ihave KENWOOD TS-940S
&
TS-440S that are included in their hardware driver lists. Most modern

equipment with eomputer interfaces are supported though. Once you use

the coputer controlled transceiver you will wonder how you ever got
along
without it even for just routine everyday non-contest logging.

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEAST-COMPUTER SHOW - MARCH 10, 1996

LINDENHURST, NY -
On March 10, 1996 the Great South Bay Amateur Radio Club and the Suffolk County Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the Knights of Columbus Hall located at 400 South Broadway, Lindenhurst, NY. This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams and information. General admission is $ 5.00.

For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam seesion. 1996 ARRL/VEC fee is $ 6.05,
exact change is appreciated. Novice exams are free.

For vendor and additional information pleas contact, Walter Wenzel KA2RGI at (516) 957-0218 or Lou Meister N2YBX at (516) 842-9159, during EVENING HOURS ONLY (7PM-10PM). NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the limited space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL and 223.86 OC.

Food Service during the Hamfest will be provided by members of the Knights of
Columbus Council.

Message-ID: <4giqia$3lta@theory.tc.cornell.edu>
Source record: 230168

Vincent Biancomano <v.biancomano@ieee.org> wrote:
>P.S. to Kevin Schmidt:
>The 72nd edition of the ARRL License Manual, dated 1 January 1975,
>states in the Extra Class chapter that applicants "should be prepared
>to draw schematics." So that requirement existed for Extra Class at
>least through 1974.
>
>Regards,
>Vince, WB2EZG
>
Perhaps you didn't read my post. I said:

:When I studied for the exams in the late 60s, the ARRL manuals
:said that you should be prepared to draw diagrams. However, the real
:FCC tests, as various posts have verified, had schematic drawing in
:the late 50s and no drawing in the early 60s. I believe that the
:ARRL license manuals are a poor method of determining the actual
:test questions.

Therefore the fact that the license manual said in 1974 what it
had been saying for years just meant the license manual was still
out of date with respect to the type of tests the FCC really gave.
Quoting again from my post you were replying to:

:I took the extra exam in 1968 and drew no diagrams at all: no block
:diagrams; no schematic diagrams.

(Tongue-in-cheek on)

Makes me think of my idea for taking care of "too smart" foxes who park
in places that aren't public property. " Hello, police department, (or
xyz security, or building owner,..)., there are some suspicious looking
characters parked in XYZ parking garage, a construction site at xxx,
You might want to check them out. I think they are drinking, selling
drugs, selling cloned cellphones, shooting guns, etc..."

2749. Radio Propagation & Space Weather Forecasting Course

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-22 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <4gh7c5$e19@holly.cc.uleth.ca>
Source record: 230170
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.amateur.space

NOTICE: There are still lots of seats available for the Internet Space Weather and Radio Propagation Forecasting Course, scheduled to begin on 18 March. An enrollment form is included at the end of this announcement for those who want to enroll. Enrollment forms must be postal mailed by interested participants no later than 04 March to be accepted.

CORRECTION TO PREVIOUS ANNOUNCEMENT:

We would like to correct a mistake in our previous posted announcement that stated that no more than 60 people will be accepted for this course. We WILL accept more than 60 people for the course. If more than 60 enrollment forms are received, everyone who enrolls will be accepted. But we will stop actively advertising the course and will discourage investigators from enrolling to take this course after 60 people have enrolled.

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE ANNOUNCEMENT

The response to our questionaire has been sufficient to justify going ahead with the Internet Space Weather and Radio Propagation Forecasting Course. People with almost any type of computer system will be able to take this course (see below).

Course Start-Date

The course is scheduled to begin on 18 March 1996. Persons interested in enrolling in this course MUST SEND US THE APPROPRIATE ENROLLMENT FORM AND PAYMENT FOR THE COURSE NO LATER THAN 04 MARCH 1996 TO BE ACCEPTED. That is, the enrollment forms must be postmarked no later than 04 March. This is required so that we have time to receive the enrollments and to distribute all required computer software and make certain everyone is ready to receive the course material before the course start-date. A printable enrollment form with mailing instructions has been appended below.

Course Prerequisites

There are no prerequisites to take this course. If you are interested, sign and send the enrollment form. This course will not be a difficult one for most people to handle. It will be visually-oriented with minimal math involved and will gradually increase in detail and complexity, building on the framework previously taught and established.

By the time the course is completed, everyone who takes the course should be able to forecast space environment and radio propagation conditions with accuracies comparable to professional forecasters.

One-Time Course

There are currently no scheduled plans to offer this course again in the future, UNLESS there is sufficient interest in the Internet community to justify offerring it again.

So, if you are interested in taking this course, this is the time to sign up. Don't wait for the next opportunity, because there might not be one.

Course Curriculum Reading Software

The following FREE software will be required to take this course. This software is available for most computer platforms, including:

* DOS
* Windows (3.x / NT / 95)
* Macintosh
* SDK
* UNIX systems (HP, SGI, and Sun supported)

The software is the ADOBE ACROBAT READER. This software is free of charge and can be downloaded at your convenience via FTP or WWW from Adobe (ftp.adobe.com/pub/adobe/Acrobat or http://www.adobe.com) or via our FTP system at: solar.uleth.ca in the subdirectories of "pub/solar/Software/Acrobat". Our FTP system is now connected to the Internet using a high-speed T1 line, so those who may have had slow downloads previously should notice a significant improvement in transfer speeds.

The use of the Adobe Acrobat Reader software has several significant advantages over other delivery methods. These include:

* Ability to incorporate complete graphical figures and high-resolution images into the lesson material for high-quality visually-oriented lessons.
* WWW-style links to other sections of the lesson material, allowing cross-references or bookmarks to be included.
* Support for imbedded digital video movies (AVI, MOV, MPEG, etc) if we should choose to insert movies of solar flares, etc.
* Wide compatability amongst most available computer platforms.
* Lessons can include links to WWW sites if you have Internet WWW access (not a requirement for the course).
* Lessons can be printed out on paper for those who would rather take the course on paper.
* There are security features available that are attractive.
* Compression features to reduce the disk-space requirements and download times.

Available Optional Course Material

This course will make use of a number of different IBM or compatible software products (designed for MSDOS 3.3 or higher systems or Windows systems running in DOS mode). The available software which can be used as part of the course curriculum includes the following, which can be ordered as part of the course when filling out the Course Enrollment Form appended to this announcement. This software is optional and will not be required to successfully complete the course. But it will certainly provide greater hands-on experience:

1. SKYCOM PRO Version 2.0 Ionospheric Signal Analyst Software (normally sold for $110.00 to $135.00 USD).
2. Professional Dynamic Auroral Oval Simulator (normally sold for $100.00 USD).
3. BCAST Solar and Geophysical Database Manager (normally sold for $50.00 USD).
4. Extended Database containing sunpot numbers from the year 1818, solar flux values from the year 1947, and geomagnetic data from the year 1932 (normally sold for $50.00 USD).
5. IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Software (valued at $50.00 USD).

Also available as part of the course curriculum, intended to be indirectly used as tools for the course, are our subscribable E-Mail Internet Services FOR ONE YEAR that include:

1. Daily Summaries of Solar and Geophysical Data (including all of the critical solar indices, geomagnetic indices, and statistics on solar flares, sunspot numbers, solar flux values, proton and electron fluences, neutron monitor and PCA statistics, etc).
2. Daily Summaries of Ionospheric Data (including ionospheric data from observatories around the world).
3. Daily Summaries of Auroral Activity (summarizing auroral activity for the last 24 hours and giving forecasts for the next 3 days).
4. Weekly Solar Terrestrial Forecasts and Reviews (which include complete summaries of activity in graphical formats as well as 10-day forecasts of geomagnetic activity, HF propagation conditions, auroral activity and potential satellite anomalies.
5. All Alerts and Warnings (warnings and alerts for major solar flares, geomagnetic storms, proton and PCA events, satellite anomalies and auroral activity).

These additional optional materials are not required to take the course, but will help you in developing your forecasting skills during and after you have completed the course.

Number of "Seats" Available

(Notice that this couse will be conducted entirely through the Internet via FTP or WWW in the convenience of your home or office. It does not require that you fly out and physically attend a class. Those who are interested in the course but do not have Internet access may also

arrange to purchase the course on-disk. Contact us for pricing.)

Enrollment will be on a first-come first-served basis. Although 60 seats are officially available, we will accept anyone who enrolls even if the number of seats exceeds 60. We will, however, stop advertising this course after the 60th seat has been taken. If you are concerned about the speed of the postal system delivering your enrollment form, we can reserve a seat (or seats) for you if you send an e-mail message stating your intent to enroll in this course to: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu. Include an appropriate enrollment form in your message.

Method of Course Delivery

Lessons will be available for download via FTP or WWW on a weekly basis by all individuals taking the course. If you are away one week, the older material will remain on-line so you can catch up at your convenience. We now have a high-speed T1 line installed which has resulted in significantly faster FTP and WWW transfers. The transfer of course material using this method will therefore be more than adequate.

Course Assignments

There will be course assignments that can be completed and returned to us if desired. However, we are not going to enforce this. If you are too busy to complete course assignments, we certainly won't hold that against you. Whether you decide to work on the assignments or "hand them in" will be entirely up to you. The assignments are only intended to help hone your skills and test your knowledge.

We Will Help

If parts of the course are particularly difficult to grasp, send us e-mail and we will try to clarify and explain the concepts using e-mail correspondence.

Revised Course Outline

The current course outline follows below. The order of the material listed below may not necessarily be the order in which they appear in the course curriculum.

COURSE OUTLINE FOR THE
INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE

Over 150 Topics Covered

Goal: To learn how to accurately forecast space weather and radio propagation conditions using information available on the Internet, through radio observations, and through studies using supplied computer software.

Upon completion of this course, each student should be able to formulate space-weather and radio propagation forecasts with accuracies comparable to professional forecasters.

Supplied: o SKYCOM PRO Version 2.0 HF Ionospheric Signal Analyst
o Professional Dynamic Auroral Oval Simulator
o BCAST Solar and Geophysical Database Manager
o IMPACT - Simple Computer Aided Coronal Mass Ejection Impact Assessment Program
o Extended Database of sunspot numbers, solar flux and geomagnetic data.
o Subscription to All STD Solar and Geophysical E-Mail Products (including alerts and warnings) for one year.

Total Value of the Supplied Material: over $540.00USD

The following topics and subtopics are currently scheduled to be included as part of the course curriculum. There will probably be many other subtopics included that are not listed here.

o The Sun
* Basics of the Sun
* Sunspots
- Types of Sunspots
- Sunspot Magnetic Fields
* Solar Radiation and Radio Emissions
* Solar Cycles
* Techniques for Modelling Solar Cycles
* Sources of Information and Imagery

o Interplanetary Space
* The Solar Wind
* Magnetic Fields
* Heliospheric Current Sheet
* Solar Sector Structures

o The Earth
* Magnetosphere
- The quiet magnetosphere
- The disturbed magnetosphere
- Understanding and Deriving Magnetic Indices
K-Indices
A-Indices
Auroral Electrojet (AE) Index
DST Index
- Magnetic Storms
Sudden Storm Commencements (SSCs)
Gradual Storm Commencements
- Geomagnetically Induced Currents (GICs)
Effects on Electrical Hydro Systems
Effects on Other Long Conductors
* Ionosphere

- Formation of Ionospheric Layers
- Factors Affecting Ionospheric Layers

o Solar Disturbances
* Transient Solar Coronal Mass Ejections (CMEs)
- Types and Structures of Coronal Mass Ejections
- Understanding the Importance of CME Structures
- Inferring CME Structures from Available Solar Data
- Coronal Mass Ejection Detection Methods
- Using IMPACT (software) to Aid in CME Disturbance Predictions
- Solar Cycle Dependencies
* Solar Flares
- Basic Nature of Flares
- Types of Flares
- Flare Rating Systems
- Significance of Proton Flares
- Ground Level Events (GLEs)
- Fast Transit Events
- Interpreting Magnetograms
- Determining Magnetic Shear and Flare Susceptability
- Solar Flare (and Proton Flare) Prediction Techniques
- Solar Flare Related Coronal Mass Ejection Prediction Techniques
- Sources of Solar Flare Information
* Solar Coronal Holes
- Coronal Hole Basics
- Recurrence
- Solar Cycle Correlations
- Associations with Near-Relativistic Electrons
- Coronal Hole Related Disturbance Prediction Techniques
* Filament Eruptions
- Filaments and Prominences
- Eruptive and Non-Eruptive Activity
- Filament-Associated Coronal Mass Ejections
- Filament-Related Disturbance Prediction Techniques
* Possible Lunar Influences
- Interaction with the Geotail

o Auroral Activity
* Basic Theory of the Northern/Southern Lights
* Behavioral Characteristics of the Auroral Ovals
* Sensitivity to Solar Disturbances
* Affects on Satellite Health and Radio Communications
* Mathematical Models of the Auroral Zones
* Auroral Activity Prediction Techniques
* Information Sources

o Conditions Affecting Satellite Health
* Satellite Orbits
- Geosynchronous
- Sun synchronous
- Polar

- Properties of Lagrangian Orbital Points
* Atmospheric Drag
* Surface Charging Anomalies
* Deep Dialectric Charging Anomalies
* Interplanetary Shocks
* Magnetopause Crossings

o Postulated Sun/Earth Climate Connections
* Possible Long-Term Climatic Trends
- Rainfall
- Temperatures
- Atmospheric Pressure
- Storm Tracks
- Ozone Correlations
* Possible Short-Term Meteorological Trends
- Pressure and Winds
- Lightning
- Storm Systems
- Ozone Responses

o Radio Propagation
* Basic Theory (Non-Technical)
- Characteristics and Components of Radio Signals
- Understanding Plasmas
- Importance of Electron Collisions
- Appleton/Hartree Contributions
- Signal Polarization and Coupling
- Ionospheric Absorption
Deviative Absorption
Non-Deviative Absorption
- Fading
- Multipathing
- Travelling Ionospheric Disturbances
- Solar Related Disturbances
- Structure of the Ionosphere
Ionospheric Layers
Importance of Sporadic-E
Effects of Spread-F
Solar-Cycle Dependencies
Models of the Ionosphere
x Simple Mathematical Models
x Numerical Maps
x CCIR
x URSI
x The International Reference Ionosphere (IRI)
x Others
* Probing the Ionosphere
- Probing Techniques
- Probing Instruments
- Sources of Ionosonde Information
* Basic Ray-Tracing Concepts

- Ordinary vs Extraordinary Signals
- Becoming Familiar with Ray-Tracing Software
* Ray-Tracing in Three-Dimensions
- Ray-Tracing Software Considerations
- Preparing for 3D Ray-Tracings
- Performing 3D Ray-Tracings
- Studying 3D Ray-Tracing Results
* Vertical Radio Signal Propagation
- Signal Reflection Behavior
- Critical Frequencies
- Ray-Tracing Vertically-Incident Signals
* Oblique Radio Signal Propagation
- Signal Refraction/Reflection Characteristics
- Effects of Geomagnetic Activity
- Effects of Solar Activity
- Ray-Tracing Obliquely Incident Radio Signals
- Determination of Maximum Usable Frequencies
Simple Empirical Methods
Ray-Tracing Techniques
- Effects of Sporadic-E
- Non-Great-Circle (NGC) Propagation
Responsible Conditions
Compensation Methods
Ray-Tracing Techniques to Analyze NGC Propagation
- Chordal-Hop and Inter-Layer Ducting Propagation
Advantages and Disadvantages
Analysis using Ray-Tracing Techniques
Detailed Ducting Analyses
- Searching for and Exploiting Exotic Propagation Paths
Properties of Exotic Paths
x Auroral-Related Non-Great-Circle Propagation
Searching for Exotic Paths using 3D Ray-Tracing Techniques
Determining the Most Reliable Exotic Radio Paths
* Ionospheric Disturbances
- Solar Related Disturbances
Solar Flares and Related Coronal Mass Ejections
Coronal Holes and High Speed Solar Wind Streams
Filament Related Coronal Mass Ejections
Impact of Flare Related Radio Noise Bursts
- Short Wave Fadeouts
- Sudden Phase Anomalies
- Sudden Frequency Deviations
- Devastating Effects of Polar Cap Absorption
- Disturbances and their Effects on Satellite Communications
* Radio Propagation Prediction Methods
- Short-Term Forecasting Techniques
- Medium-Term Forecasting Techniques
- Long-Term Forecasting Techniques
- Sources of Forecasting Information

o Applied Forecasting Techniques
* Climatology
* Pattern Recognition
* Compiling Necessary Information
* Exploiting Databases
* Computer Related Aids
* Studying Real-Life Examples
* Developing Experience and "Intuition"

o Field Experience
* We present you with some specific historic real-life scenarios. Using the information and techniques studied in this course, you are asked to develop your own space-weather and radio-propagation predictions. The actual real-life impacts are then studied and compared with your forecasts.
* We present you with several hypothetical (possible future) examples and ask you to develop your own forecasts.

o Course Completed

INTERNET SPACE WEATHER AND RADIO PROPAGATION FORECASTING COURSE
ENROLLMENT FORM

I am interested in taking the Internet Space Weather and Radio Propagation Forecasting Course, currently scheduled to begin March 18, 1996. I have filled out the necessary information below.

I AM INTERESTED IN TAKING THE FOLLOWING COURSE VARIANT:

[ ] - The Full Course without the accompanying computer software or subscribable e-mail services for $150.00USD.

[ ] - The Full Course WITH all accompanying computer software, but WITHOUT the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $200.00 USD.

[ ] - The Full Course WITHOUT the accompanying computer software, but WITH all STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $200.00 USD.

[ ] - The Full Course WITH all accompanying computer software AND WITH the STD E-Mail subscriptions to all Daily Solar and Geophysical Products, all Weekly Products and all Alerts and Warnings for one year for $250.00 USD.

CHOOSE ONE OF THE FOLLOWING:

[ ] - I need the computer software postal mailed to me on 3.5" high-density disks to the address written on the *REVERSE* side of this order form for an additional $40.00USD which includes shipping and handling.

[ ] - I expect the Solar Terrestrial Dispatch to notify me via e-mail of the Internet FTP and WWW procedures to obtain the computer software.

CHOOSE ONE OF THE FOLLOWING:

[ ] - Please inform me of the FTP/WWW procedures to obtain the FREE ADOBE ACROBAT READER software over the Internet, required to read the course material.

[ ] - Please ship me the ADOBE ACROBAT READER software on 3.5" HD disks (for IBM or compatible systems only) for an additional $10.00 USD.

TYPE OF COMPUTER AND OPERATING SYSTEM THAT WILL BE USED TO TAKE THIS COURSE:

_____

MY E-MAIL ADDRESS IS:_____

MY BACKUP E-MAIL ADDRESS IS: _____
(if available)

MY VOICE TELEPHONE NUMBER IS: _____

MY FAX TELEPHONE NUMBER IS: _____

TOTAL AMOUNT INCLUDED FOR ENROLLMENT, INCLUDING ANY ADDITIONAL AMOUNTS REQUESTED FOR SHIPPING SOFTWARE, ETC, IN UNITED STATES CURRENCY ONLY:

$_____._____ U.S. DOLLARS

I have remitted a check or money order (IN U.S. FUNDS) for the above amount to the "Solar Terrestrial Dispatch" at the following address:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

FAX: 403-756-3008

I understand that course material (lessons) will be made available on a weekly basis for anonymous FTP and WWW from the Solar Terrestrial Dispatch and that I will be notified via e-mail of the FTP/WWW and other procedures required to obtain the lesson material and read it on my computer. I also understand that there will be no refunds for the course should I be dissatisfied with the course or the included software or services.

By signing below, I agree that I will not share copies of this course with any other individual(s) through any means without the expressed permission of the Solar Terrestrial Dispatch. FAILURE TO SIGN AND DATE THIS FORM WILL VOID YOUR ENROLLMENT APPLICATION.

Date: _____, Signed: _____

Please Print Your Signed Name Here: _____

+-+-+-+-+-+-+-+-+-+-+-+-> End of Enrollment Application <-+-+-+-+-+-+-+-+-+-+-+-+

2750. IPS Daily Report - 22 February 96

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-22 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <4gitsn$2gh@flare.syd.ips.oz.au>
Source record: 230171

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 FEBRUARY AND FORECAST FOR 23 FEBRUARY - 25 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 21 Feb
Daily Proton Fluence >1 MeV: 1.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.2E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Feb 24 Feb 25 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Feb: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 21 Feb
Learmonth 8 2232 2222
Fredericksburg 7 6
Planetary 5 5

Observed Kp for 21 Feb: 1221 1122

2B. MAGNETIC FORECAST
Date Ap Conditions
23 Feb 6 Quiet to unsettled
24 Feb 6 Quiet to unsettled
25 Feb 8 Quiet to unsettled
COMMENT: Quiet conditions expected next three days.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
22 Feb Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
23 Feb Normal Normal Normal
24 Feb Normal Normal Normal
25 Feb Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
22 Feb 20

Observed Australian Regional MUFs:
Darwin: Near normal monthly predicted values,
apart from 15 to 60% enhancements between 0700 and 1000 UT.
Townsville: Near normal monthly predicted values
apart from 15 to 30% enhancements between 0700 and 1000 UT,
and 15 to 30% depressions between 1100 and 1600 UT.
Sydney: Near normal monthly predicted values.
Hobart: Near normal monthly predicted values.

Predicted Monthly T index for February: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
23 Feb 10 near predicted monthly values
24 Feb 10 near predicted monthly values
25 Feb 10 near predicted monthly values

2751. Hamfests in Seattle or other pacific NW areas?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-22 00:00:00 UTC
From: rodell@atl.com
Message-ID: <1996Feb22.065930@atl.com>
Source record: 230172

I've recently moved and don't have any publications coming through the US SnailMail forwarding yet, so I'm looking for a list of hamfests or other activities in the pacific NW, and the Seattle area in particular. Any help or pointers are appreciated.

_/_/_/

2752. Digest of Articles - QST Jan 96 (Long - 42k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-22 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <4ghj05$aa8@news1.infinet.com>
Source record: 230173
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the December, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserver/digests
(in Europe)ftp.funet.fi/pub/ham/arrl/infoserver/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:More EWEs for You
Author>Koontz, Floyd A. - WA2WVL

Source>QST Jan 96, pp. 32-34
Abstract>WA2WVL augmented his Ewe antenna by mounting four of them in a switchable array to cover all four directions; then an added array of four, driven in phase or 180-degrees out of phase for added gain.

Digest>In QST Feb 95, WA2WVL published a description of what he calls the "Ewe" antenna. It is a relatively short antenna designed for reception only, primarily for use on longer wavelength bands, especially 160- and 80-meters. Superficially, it is very similar to the Beverage Wave Antenna, in that a single wire runs from ground level to the top of a post, from there horizontally to a second post, then down that post to a resistor connected to a ground stake. However, the Ewe primarily acts as two vertical radiators phased 90-degrees apart; the horizontal wire is for phasing only. Its radiation pattern is a cardioid lobe with broad sensitivity in the forward direction, with a high front-to-back ratio.

In this article, Mr. Koontz describes an expansion of the usefulness of the Ewe design by describing a switchable array of four Ewes, oriented in the four directions from a center pole. Each antenna shows uniform sensitivity over more than a 90-degree included angle. Hence, by switching the beams, one can cover all points of the compass with less than 2-dB. variation in sensitivity.

Detailed plans for one configuration, optimized for the 160-meter band, are illustrated. A switch box and matching circuit are located at the base of a center post. Four wires emerge from the box and run up the four sides of the post to the top where each passes through an eye-bolt, then runs horizontally to another eye-bolt on its respective end post located 50-feet (15.2-m.) away, and down that post to where it is connected through a 1200-ohm non-inductive resistor to a ground stake.

The matching circuit at the drive end is a 9:1 impedance transformer. The switching network is comprised of four SPST relays that connect the antenna end of the transformer to each of the antenna wires, as desired.

After the author verified the success of the 4-way switchable antenna, he built an identical array 300-feet (91-m.) in one of the cardinal directions from the original one, and provided a feed system that could drive the two arrays either in phase, to provide broadside gain, or 180-degrees out of phase, for in-line gain.

Combining the directivity of the individual Ewe with the phasing gain narrows the main lobe of each radiation pattern substantially, and adds about 3-dB to overall gain. With broadside drive, the main lobe is narrowed to about a 60-degree beamwidth between minus 3-dB. points, compared with more than 120-degrees for the single array. The end-fire pattern is also narrowed, but not as drastically. It shows a beamwidth of about 90-degrees.

Title>TA2:An Automatic Antenna Tuner - the AT-11
Author>Kincaid, Dwayne L. - WD8OYG
Source>QST Jan 96, pp. 35-39
Abstract>Construction details for an automatic tuner. Binary-valued inductors and capacitors are switched, controlled by a microcontroller, until SWR is below 1.5:1. Maximum power level is 100-watts.

Digest>In this article, WD8OYG provides complete construction information to build a microprocessor-controlled automatic antenna tuner capable of handling up to 100-watts output. It is designed to match unbalanced loads to the 50-ohm unbalanced output of a transmitter or transceiver. With a balun connected at the output of the tuner, it could also be used with balanced loads and transmission lines.

The unit will match loads ranging over a remarkably wide range of impedances. It can handle resistive loads from about 10- to 500-ohms on all HF bands except 160-meters. On that band, it is limited to matching 25- to 100-ohm loads. The author successfully used the tuner to match a center-fed 40-meter dipole on all bands from 80- to 10-meters.

The circuit is a conventional inverted-L network, using a series inductor and parallel capacitor. The value of the inductance is adjusted by automatically switching in and out of the circuit one or more of eight inductors, the values of which are stepped in binary fashion. Each is wound on a toroidal core; the smallest value is 0.08 uH., the next 0.16-uH., and so on up to the eighth which is 10.0-uH.

Likewise, the shunt capacitor is made by switching similarly stepped values of capacitance in parallel. The smallest capacitor is 5-pF., and the largest 640-pF. For matching loads less than 50-ohms, the capacitor is connected from the input side of the inductor to ground; for loads above that value, it is switched to the output side. By selecting combinations of inductors, one can adjust the inductance to 256 different values, in steps of 0.08-uH.; similarly, the capacitance can be selected from 5- to 1280-pF.; and switched to one side of the inductor or the other. This provides a total of 131,072 (256 x 256 x 2) different combinations selectable by operation of the relays.

Selection of the components is controlled by a microprocessor. In automatic operation, output power is adjusted to 10-watts and an SWR bridge senses the reflected power. The microprocessor causes the relays to step through a programmed sequence that rapidly selects one after another combination until the SWR drops to below 1.5:1. At that point, the sequence ends but the operator can manually make further fine adjustments, if desired.

As in so much modern electronic equipment, the complexity of the system is embodied in the IC chips, and the construction of the tuner is relatively simple. Aside from the eight inductors, eight capacitors, and seventeen relays, only three ICs and a handful of other electronic components are required. A complete kit of parts, including a preprogrammed microprocessor, is available for the price of $158, including domestic shipping, from LDG Electronics, 1445 Parran Rd.,

St. Leonard, MD 20685. For foreign orders, add $12 for extra postage.

Title>TA3:How to Measure Large Direct Currents with Common Meters
Author>Poeth, Dean F. II - K8TM
Source>QST Jan 96, pp. 40-43
Abstract>Using a voltage-dropping resistor to measure large currents with a voltmeter, or a shunt resistor for use with a milliammeter. Describes how to make accurately-known ultra-low ohmage resistors.

Digest>Most multimeters measure DC current no higher than 10-amps, if that much, but occasionally a problem arises that makes it necessary to measure larger currents. High currents are not difficult to measure using general-purpose voltmeters or low-current milliammeters with shunt resistors. With a voltmeter, a voltage dropping resistor is inserted in the circuit and the voltage drop across the resistor is measured. Ohm's Law can then be used to calculate the value of the current flow. Alternatively, a milliammeter can be shunted with a low-value resistor to by-pass most of the current around the meter, but let enough flow through it to give an accurate measurement.

A reasonably accurate voltage-dropping resistor can be made from a piece of copper magnet wire. Using a copper wire table, like the one in the ARRL Handbook, one can choose a size of wire that is large enough to carry the full current expected. Then, note the full-scale value of the lowest voltage scale on the meter. Calculate the resistance needed to cause that much voltage drop. From the wire table, calculate the length of wire needed to show that much resistance.

For example, to measure 5-amp current with a conservative 100-circular mils per amp current carrying capacity, it can be seen that No. 22 enameled copper wire will do the job. To make a voltage drop of 0.05-volts, half of full scale on the meter, Ohm's Law shows that: R = E / I = 0.05 / 5 = 0.01-ohms. The table shows that 1000-feet of No. 22 wire has 16.2-ohms resistance, therefore 0.617-feet (18.8-cm.) of wire is required.

The accuracy of this method of measurement is dependent on the precision with which wire sizes are controlled by the manufacturer. The author states that the accuracy of the meters can be expected to be better than plus or minus 5-percent.

The voltage-drop method is a good way to make test measurements. For continuous indication, however, it is better to use an inexpensive milliammeter with shunt resistor rather than a relatively expensive multi-range voltmeter. A shunt resistor connected across a milliammeter diverts most of the current around the meter; the diverted fraction is determined by the ratio of the shunt resistance to the internal meter resistance.

To calculate the resistance needed in the shunt requires that one know, or measure, the internal resistance of the meter. But one can usually

not measure that directly with a conventional ohmmeter. Instead, it is necessary to adjust a variable trimmer pot to a resistance exactly equal to that of the meter, then measure the pot with an ohmmeter. This trick can be done using a Wheatstone bridge circuit that can be constructed inexpensively from readily-available components, and for which explicit instructions are included in the article.

PRODUCT REVIEW (PR)

Title>PR1:ICOM IC-775DSP MF/HF Transceiver
Author>Swanson, Glenn - KB1GW
Source>QST Jan 96, pp. 67-72
Abstract>Review of a top-of-the-line ICOM transceiver. Reviewers found its performance to be excellent, but with some reservations.

Digest>The Model IC-775DSP is the latest top-of-the-line MF/HF transceiver offered by ICOM. With its list price approaching $5,000, buyers have the right to expect state-of-the-art performance in all respects.

The radio offers essentially all of the features expected in such a unit: continuous receiver coverage from 100-KHz. to 30-MHz., 200-watts maximum power output with 100-percent duty cycle on all bands, dual-VFOs, lots of memories, scanning, built-in electronic keyer, optional narrow-band i.f. filters, effective noise-blanker, and many others. In addition, it features digital signal processing (DSP) for noise suppression, narrow audio filters, and other functions. Reviewers were enthusiastic about most aspects of the performance over the whole range of modes and bands. Their opinions were not universally favorable, however, and in a short review it is easier to relate the objections and deficiencies noted than the many praiseworthy aspects of the performance.

For one thing, the designers have nearly gone overboard with the front panel controls. There are more than 90 knobs and buttons on the panel! In addition, there are 26 main categories of software switches on two separate menus. Since many of the front panel controls are items that are rarely adjusted, it seemed to some that they could have been relegated to an internal sub-panel, or otherwise removed, to reduce the visual complexity of the rig.

A more serious criticism regards the dual-VFO concept newly introduced with this unit. ICOM has seen fit to abandon the common A/B and A=B controls used by them as well as other manufacturers in recent years. The IC-775DSP is substituting what they call the DUALWATCH system. It consists of MAIN and SUB control knobs and frequency readouts. The MAIN display is always on; when receiving, pressing the DUALWATCH button causes the SUB display to come on and instantly one is listening to both

frequencies on the same audio channel! The single volume control affects both signals simultaneously, but there is a BALANCE control to emphasize the one frequency or the other. When it is set at midscale, both are equally loud; from one end of the range to the other, the one signal is made louder and the other one softer.

Instead of an A/B button, the same function is provided but labeled: CHANGE; i.e. pressing it switches the MAIN and SUB frequencies. Likewise, instead of the A=B button, the control is labeled EQUAL. All reviewers agreed that the change of nomenclature only confuses the issue; the time-honored nomenclature is intuitively clear, whereas the new substitute clouds the issue. Worse, the reviewers felt it is too easy to transmit on the receive frequency when operating split-frequency in a pileup. Also, the reviewers cautioned that the DUALWATCH SYSTEM cannot be used to monitor a different band. The signals are split at the first i.f., which means it is effective only in the same band.

The worst, and seemingly most inexcusable, performance deficiency was found to be in the operation of the AGC. It caused an excessive amount of intermodulation distortion (IMD). During 1995, two different authors published articles in QST harshly criticising five other models of ICOM transceivers for the high levels of IMD caused by the AGC circuits. Both articles related the finding that the circuit design was faulty and relatively minor changes in circuit components could be made to correct the problem. Now, a newly introduced and very expensive transceiver is found to contain the same kind of poorly-designed AGC circuits! After the reviewers complained, ICOM was contacted. They took back the rig and replaced it with a modified unit. The replacement was found to perform "as well in this regard as other radios in its price class".

The most important new feature in the radio is the digital signal processor (DSP). Built into the radio is a DSP circuit that operates either on a separate i.f. of 15-KHz., used only for this purpose, or else on the audio output. It provides all of the features that are familiar from the outboard DSP units that have been available for the past several years. Included are noise suppression and heterodyne elimination in phone modes, as well as a very versatile set of filters for use in phone, CW, and digital mode operations. CW filters are available as narrow as 80-Hz. bandwidth. For SSB operation, both the high and low cutoff frequencies can be individually adjusted, allowing a very wide variety of filter characteristics to be set.

It is generally assumed that, to get best receiver performance from filters, the filtering should be done at an i.f. inside the AGC loop. Since this radio does some of its filtering at the 15-KHz. i.f., does this mean that it is inside the AGC loop? Unfortunately, no; the AGC is performed at higher i.f. and so the built-in DSP, while effective, is practically no more so than if the processing were being done by a DSP unit outside the transceiver.

The ARRL Laboratory is now offering a 30-page printed report giving detailed data much more complete than in the magazine article. It is available from the ARRL Technical Department for the price of $7.50 to ARRL members, or $12.50 to non-members. The League plans to issue similar reports for all future reviews of full-function transceivers.

The manufacturer's list price is $4,760. Optional i.f. filters add from $75 to $199 each.

Title>PR2:MFJ-784B Tunable DSP Filter
Author>Lindquist, Rick - KX4V
Source>QST Jan 96, pp. 72-73
Abstract>Performance review of one of the most versatile and effective outboard DSP filters yet introduced. It uses a 16-bit microprocessor, operating at 12-MHz. Rated excellent in noise reduction and filtering.

Digest>In the very few years since outboard DSP systems were first offered to the amateur community, substantial improvements have been made. The MFJ-784B is one of the most advanced.

The unit uses a 16-bit chip, the ADSP-2105, that runs at 12-MHz. Like all outboard units, it takes as its input the audio signal from the radio and delivers it, filtered and "massaged", to headphones or a speaker. MFJ recommends that the users make a second connection to the radio routing the CW sidetone around the filter to the output. The unit contains its own audio AGC.

The functions provided include noise suppression, heterodyne elimination, and a very wide variety of filters for use in phone, CW, and digital mode operation. The heterodyne eliminator can be either automatic or manually adjusted. For SSB operation, the high- and low-frequency cutoff points can be individually adjusted.

One nice feature is a quick way of adjusting a narrow CW filter. A "spotting tone" is internally generated which can be adjusted by a knob until the audio pitch is the same as a desired signal. At that point, the filter is centered on the signal and, with another control, one can vary the bandwidth to whatever is optimum under the conditions prevailing.

The reviewers' summary conclusion was that the MFJ-784B is convenient and economical. It is effective in enhancing performance of both older receivers and newer ones not including built-in DSP. The manufacturer's list price is $249.95.

Title>PR3:M-Squared EB-432 Eggbeater Antenna
Author>Ford, Steve - WB8IMY
Source>QST Jan 96, p. 74
Abstract>Review of a 70-cm. Eggbeater antenna. It is omnidirectional with horizontal polarization at the horizon and right-hand circular polarization overhead - ideal for satellite reception.

Digest>An Eggbeater antenna is made of two full-wave loops mounted vertically at 90-degree angles from each other. When they are made of heavy wire, they look like an oversized version of an old-fashioned kitchen eggbeater. They are connected in parallel and fed through a balun.

The M-Squared Company's EB-432 covers the 70-cm. amateur band and its operating bandwidth covers the entire band. The two loops are formed of No. 10 copperweld wire held securely in place at top and bottom, where the loops cross, by a fiberglass rod. At the bottom end, the rod is fastened to the housing of the balun. On the underside of the balun housing is an aluminum block that holds the coax input connector and also six radial rods.

The eggbeater has one characteristic that makes it an ideal omnidirectional antenna for satellites in low earth orbit. That is, it shows horizontal polarization at the horizon in all azimuth directions, and right-hand circular polarization overhead. There is no null directly overhead, as ground-plane antennas have!

The reviewer mounted the antenna inside his attic, along with a 2-meter ground plane, and used the combination to work PacSat Oscars 16, 18, and 19, and also Fuji-Oscar 20. Additionally, he had available a 70-cm. ground plane that he had previously found to be less than satisfactory for receiving the downlinks from the various satellites. For test purposes, he was able to switch rapidly between the two during each pass of the satellites. Using the Eggbeater, he found reception from all of the satellites to range from adequate to excellent; whereas with the ground plane, reception was inadequate to nil.

In summary, he emphasizes that no omnidirectional antenna, including the Eggbeater, can match a multi-element beam on a 2-axis tracking mount. However, for an omnidirectional antenna, the Eggbeater will outperform practically any other fixed antenna, especially when one is working satellites.

TECHNICAL CORRESPONDENCE (TC)

Title>TC1:The Importance of Proper Tower and Mast Design
Author>Fusler, Allan H. - KI7NF
Source>QST Jan 96, pp. 77-78
Abstract>Be careful to insure any tower or mast is designed to good engineering standards and in accordance with all building codes. Otherwise, failures may cause injury and/or expensive litigation.

Digest>In this letter, Mr. Fusler points out some vitally important conditions that must be met to assure the safety of towers and masts. Failure to take adequate steps to assure proper design and construction of an amateur antenna facility might result in injury or death, or

property damage resulting in expensive litigation.

If the tower and/or other components of an antenna installation are bought new from a reliable manufacturer, they will be accompanied by extensive documentation. But before commencing construction, one should be sure to obtain the proper building permit from the appropriate county or municipal authorities. Everyone should insure that any construction on their property or at their instigation is performed in strict accordance with the building codes and other applicable specifications required by local regulations. Failure to abide by every detail of the applicable codes could be very costly in any kind of lawsuit that might result from a failure.

If, on the other hand, the tower components have been bought second-hand without documentation, or if it is the amateur's own design, a certified Professional Engineer should be consulted. The engineer will review the calculations and plans for conformity to the local codes, and for overall safety. With plans approved by a PE, and a legal building permit, one can proceed with reasonable assurance that they will be safe from damage, injury, or expensive litigation.

Title>TC2:RFI from Sodium-Vapor Street Lights
Author>Young, Del - WA7KMY
Source>QST Jan 96, p. 78
Abstract>Describes a type of controller now available that will shut down a sodium-vapor lamp if it will not "strike", rather than continue trying to start it, again and again, thereby causing RFI.

Digest>Many cities use sodium-vapor street lamps. With age, these lamps become weak and finally reach the point that they can no longer maintain arcs. When that happens, the photocell control automatically tries to strike the lamp repetitively until light from the rising sun finally causes it to stop. During the action of restriking, the circuit emits broadband RFI. If a city has many such lights (Seattle, for one, has some 113,000 of them!) the r.f. noise may be overpowering.

Now a photoelectric controller has been introduced that shuts down the light after it fails three attempts to restrike. When that happens, it turns on an LED strobe on the top of the photocell unit. It is bright enough to be seen in daylight; consequently, it is easy for repair crews to find and replace the lamp.

The patent holder of the controller is Frederick H. Blake and Associates, 3103 149th St. SE, Mill Creek, WA 98012, phone (206) 337-5117. Any amateur suffering from such RFI might try to convince the city or utility company to equip their lamps with such controllers.

Title>HK1:Use WINDOWS' Calculator to Convert To/From Time and Angle Formats to Their Decimal Equivalents
Author>Weisberg, Bud - K2YOF
Source>QST Jan 96, p. 75
Abstract>Use the calculator built into the WINDOWS operating system on personal computers to convert angle measurements from degrees, minutes, and seconds to decimal degrees, and vice versa.

Title>HK2:More on "Hum in HF Receivers"
Author>Thomaidis, Tasos - SV8YM
Source>QST Jan 96, p. 75
Abstract>Correct a cause of hum in HF receivers by bypassing the rectifier diodes with .01-uF. capacitors.

Digest>SV8YM offers another hint giving the solution to a hum problem that he encountered. He found that, in his receiver, the switching action of the rectifier diodes was modulating the received signal and producing hum.

He solved the problem by bypassing each rectifier diode with a .01-uF, 250-volt capacitor.

Title>HK3:One Wire Controls Switchable, Remote Loading Network
Author>Lee, Mitchell - KB6FPW
Source>QST Jan 96, pp. 75-76
Abstract>Shows how to use a single wire to control the antenna loading network described in the article: "Twisted Pair Controls Switchable Remote Loading Network", QST Oct 95.

Digest>Mr. Lee refers to the article: "Twisted Pair Controls Switchable Remote Loading Network" in QST Oct 95. Like the author of the earlier article, he uses a stepper switch to select loading components used in a multiband antenna.

Both authors faced the problem of determining from their remote control position in the shack the position of the stepper switch. Instead of running two conductor twisted pair, Mr. Lee used a circuit containing diodes to identify when the switch is on its last position, and thereby was able to get reliable operation using a single wire control. He includes a schematic diagram to show how this works.

Title>HK4:Does Your Microphone Have Too Much Bass Response?
Author>Schultz, John - W4FA
Source>QST Jan 96, p. 76
Abstract>To roll-off the low frequency response of a dynamic microphone more sharply, W4FA simply adds a series capacitor in the microphone lead. He finds that a capacitor between .01- and .1-uF. works well.

Title>HK5:Mobile Morse by MOUSEKEY
Author>Wirth, Terry L. - K7ACN
Source>QST Jan 96, p. 76

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Jan 96, pp. 55-56
Abstract>Questions and answers discussed in this issue include: inexpensive equipment for "fox hunting"; possibilities of DX above 50-MHz.; antennas in a small apartment; G-TOR mode; and other items.

Title>NHC2:Who Says "Fox Hunts are Dead"?
Author>Manson, Robert - WB8RWP
Source>QST Jan 96, pp. 57-58
Abstract>In order to add greater challenge (and also humor!), the author's radio club fabricated an imitation tombstone, placed the hidden transmitter and antenna inside it, and set it in place in a cemetery!

Title>NHC3:It's Time to Explore VHF/UHF Contesting!
Author>Swanson, Glenn - KB1GW
Source>QST Jan 96, p. 59-60
Abstract>Describes map grid squares. Encourages newcomers to enter the VHF Sweepstakes, and other radio operating contests.

Digest>KB1GW makes a persuasive case for any ham with VHF/UHF equipment to enter the ARRL January VHF Sweepstakes, or other contests in the future. The VHF Sweepstakes offers points for QSOs using CW, SSB, or FM modes on any bands above 50-MHz.

To participate in the contest, one need not be a member of a radio club, although entering one may enhance the fun. The object is to make as many contacts with others located in as many grid squares as possible. When a contact is made, it is only necessary to make a log entry of the other ham's callsign and grid square location.

Grid squares are areas circumscribed by lines drawn on maps that cover the entire world. To determine in what grid square a person is located, they must first find their latitude and longitude. Knowing those, one can find the square in a number of ways, including consulting the map in the ARRL Operating Manual.

Title>NHC4:Radical Radiators and Weird Wires
Author>Holsopple, Curtis R. - K9CH
Source>QST Jan 96, pp. 61-63
Abstract>Describes the use of a ladder, bus body, rain gutter, and other odd pieces of metal as antennas. Also tells how to build a simple, effective antenna tuner.

Digest>K9CH makes the point in this article that antennas do not have to be high off the ground, nor made of wire, nor cut to precise dimensions to radiate useful amounts of power. Clear communications can be conducted using antennas made of almost anything conductive, and of almost any shape. The author relates his successes using an aluminum ladder leaning against a tree, the body of a school bus, the aluminum rain gutter at the edge of his roof, and a bunk-bed frame in a dormitory room as antennas.

To couple transmitter output power to a non-resonant piece of metal requires an antenna tuner. A simple and versatile antenna tuner consists of a tapped coil and a variable capacitor. The coil should be connected between the output of the transmitter and the antenna, and the capacitor connected from one side of the coil to ground.

Author>Brone, Jeff - WB2JNA
Source>QST Jan 96, p. 64
Abstract>How a "geeky kid" became a ham, then grew up and became a

"radio guy" who is "loving every minute of it".

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Awash in the Pacific
Author>Shapiro, Garry R. - NI6T
Source>Qst Jan 96,
Abstract>The trials and privations of a DXpedition to Conway Reef, a Pacific coral atoll.

Digest>In March of 1995, five hams: Pekka Kolehneinen - OH1RY and his girl friend Taina, Garry Shapiro - NI6T, Nils Persson - SM6CAS, Jun Tanaka - JH4RHF, and Mats Persson - SM7PKK, made a DXpedition to Conway Reef, a coral atoll 300-miles southwest of Fiji. It is uninhabited, waterless and treeless, and only about the size of two football fields.

In ferrying their equipment ashore from their chartered boat, their dinghy capsized several times and a good bit of equipment was lost. But they succeeded in setting up their shelters, radio equipment, generators, and antennas. In nine days of operation, they made some 30,000 contacts.

Title>GI2:DXing Enroute to the Red Planet
Author>Owen, Michael R. - W9IP and Callas, John L.
Source>QST Jul 96, pp. 44-45
Abstract>Describes an international, 10-year program to explore Mars. NASA will launch a probe in November, 1996, carrying a transmitter on the 70-cm. ham band. Amateurs may help monitor its signal strength.

Digest>In November of 1996, NASA will launch the Mars Global Surveyor (MGS). This will mark the beginning of a ten-year cooperative program by the space agencies of a number of nations to conduct a thorough exploration of Mars, the "Red Planet".

The versatile satellite will go into orbit around the planet and spend the next several years performing two functions. First, it will make photographic maps of the entire planet with a resolution of only 1.4-meters (less than 5-feet). Second, it will carry a radio receiver/transmitter relay station that will transmit not only its own mapping data back to Earth, but also photographs and measurements from instruments and robot explorers on the Martian surface, built by Russia and other nations.

Among the transmitters that will be carried by the MGS are three that will transmit in the amateur 70-cm. band. One of these is a CW beacon on 437.1-MHz. Some 20 or 30 days after the launch in November, that beacon will be energized and will broadcast for some 24-hours. This is a test to verify the proper operation of the transmitter and the ability of ground stations to receive it. Radio amateurs are invited to participate in those tests. Further information will appear in the near

future in the AMSAT Journal.

Title>GI3:Remote Operation Comes Home
Author>Winter, Patty - N6BIS
Source>QST Jan 96, pp. 46-50
Abstract>Modern transceivers, with computer-controls, can be located at remote locations with room for antenna farms. Describes how they can be operated from home stations through telephone lines.

Digest>Only a few hams have the luxury of ample real estate to erect any desired kinds of antennas, to operate without having to be concerned about radio interference to neighbors, or without suffering interference to reception from neighbors' consumer electronics. Most of us have to operate from a city lot surrounded by neighbors, not to mention power lines and a myriad of other sources of potential noise.

Now with modern transceivers and computers, it is relatively easy to assemble a station at some remote location and operate it by remote controlled computer in our own home. N6BIS illustrates how it is done with a block diagram and photographs.

The author's block diagram shows a remote station with a tower and multiple rotary antennas, an HF radio with power amplifier, a 2-meter packet radio, and a control computer with modem. Two telephone lines connect between the remote site and the home control station. One of these carries control signals and the other audio only, both received and transmitted.

The home control station is equipped with a computer, modem, DSP unit with headphones, and a microphone plus mike/telephone interface. The radios at the remote site must be equipped with computer control interfaces. Both computers must be equipped with software to provide remote control of the radios, antenna selection, and rotator controls.

Title>GI4:Ham Radio - An Ancestral Link
Author>Turek, Robert L. - K8AAI
Source>QST Jan 96, pp. 51-53
Abstract>K8AAI, son of immigrants from Czechoslovakia, contacted a Czech ham who helped him locate his relatives. This describes his trip with his 87-year-old mother to revisit her home town and find relatives.

Digest>K8AAI, who has held that call since 1956, is the son and grandson of people who came to the United States from Czechoslovakia in 1922. They left many relatives behind, but after his grandparents' deaths, his mother and he lost contact with their cousins.

Some time ago, Mr. Turek had a QSO with Jan, OK2JS, who lives near the city of Brno in the Czech Republic. This is near where his family originated. In 1993, he asked his friend if he would help find any of the long lost relatives who might be still alive. With Jan's help, he found and exchanged letters with two of his relatives.

In 1994, he took his mother, then 87, to visit her childhood haunts and they met many relatives, including his mother's first cousin whom she had known as a child. This article relates the story of their visits and the help that he received from his ham friends.

If you're using 2m or higher frequencies, you could try hiding a small beam in some foliage, and aiming it at some nearby buildings. That should keep things busy for a while.

On one of our foxhunts, the fox was sitting in a car parked near a cluster of apartment buildings, and the reflections off the buildings were giving us all sorts of false readings. I got at least six solid readings, all pointing to the same place, a park about a kilometer away from the fox!

Here in San Diego we have a club with over 800 members -- many many with No-Code Tech Licenses. I and many many others think the No code licenses are a great addition to Amateur Radio. See my articles of accomplishments of same.

As for big gun stations -- we have a group of QRPers here, several who have worked DXCC (all CW or SSB) with less than 5 watts and modest antennas such as a Cushcraft R5 mounted 8 foot off the ground. Not easy or for the faint-hearted but DEFINITELY achievable.

Don't let a few "bug" you when the majority welcomes you.

But:

You can get further with a wet noodle and a linear than you can with just a wet noodle -- Big Al from Chicago!

P.S. to Kevin Schmidt:
The 72nd edition of the ARRL License Manual, dated 1 January 1975, states in the Extra Class chapter that applicants "should be prepared to draw schematics." So that requirement existed for Extra Class at least through 1974.

I believe that you are wrong, which is why I asked the question originally.
I took the extra exam in 1968 and drew no diagrams at all: no block
diagrams; no schematic diagrams.

When I studied for the exams in the late 60s, the ARRL manuals
said that you should be prepared to draw diagrams. However, the real
FCC tests, as various posts have verified, had schematic drawing in
the late 50s and no drawing in the early 60s. I believe that the
ARRL license manuals are a poor method of determining the actual
test questions. As I said in my original post, the license manual
had practice questions with essay like answers that included
schematic diagram drawing. The tests that I took (and apparently
others here too) did not. Having read QST, I don't believe they published
anything more than the FCC syllabus, if that, during this period.

I've opened up Mac Powerbooks to repair them and surprise! The internal
modems in those have two crystal oscilators onboard. One is rated at
46MHz and the other at 14.xxxMHz. These should create some wonderful noise
on the HF bands and the 14.xxx can interfere wih 140MHz since it's a 10th
harmonic. Does this sound right?

ZCZC AE54
QST de W1AW
DX Bulletin 12 ARLD012
From ARRL Headquarters
Newington CT February 22, 1996
To all radio amateurs

SB DX ARL ARLD012
ARLD012 DX news

This week's bulletin was made possible with info provided by the Yankee Clipper Contest Club PacketCluster network, Tedd, KB8NW, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

MYANMAR, XZ. The Finnish team of OH1MA, OH1RY, OH2BE, OH2BH, and OH2KNB were supposed to be on the air as XZ1R February 18 to 28, though there have been no PacketCluster spots on our New England network to date. Listen for their CW on 1824.5/1831, 3504, 7004, 10114, 14004, 18074, 21004, 24894 and 28004 kHz. SSB will be on 1845, 3795, 7042/7095, 14195, 18145, 21295, 24945 and 28495 kHz. QSL via SCSDX Team, PO Box 111, FIN 24101, SALO, FINLAND.

KERMADEC ISLAND, ZL8. The team for this DXpedition consists of Ken, ZL2HU, Chris, ZL2DX, Ron, ZL2TT, Lee, ZL2AL, Al, WA3YVN and an unnamed Japanese operator. They will be active for 11 days starting May 4. They depart from New Zealand on April 30.

AUCKLAND ISLAND, ZL9. Graham, ZL4MV, should be wrapping up his ZL9GD operation around press time for this bulletin. This was a short notice trip that he couldn't refuse.

WESTERN SAHARA, S0. S01A, EA2JG, and other EA's and Europeans will be active from S020R starting February 20. They should be active on CW and SSB for about a week. QSL via EA2JG, Arseli Echeguren, Las Vegas 91, 01479 Luyando, (Alava) Spain. Please, no bureau cards.

MALTA, 9H. NODXA members and friends DL7IO, DL7IQ, DL7UTM, DL7URH, DL2RUM and others will be QRV May 17 to 31. Most activity will be from Gozo Island, though some from Comino Island may be possible. Individual's call signs known at press time are 9H3TZ and 9H3TY. They will sign 9H3TY or a 9H8 call sign in the CQ WW WPX CW contest. QSL via DL7VRO.

CHAGOS ISLANDS, VQ9. Ron, AA5DX, will sign either VQ9DX or VQ9RM for the next 4 months. He will concentrate on 160, 80 and 40 meters.

ICELAND, TF. Fred, ON6QR, Peter, ON7PC, Jack, ON5OO and Stef, ON1KSZ, will be in the CQWW WPX SSB Contest March 30 and 31. A special call sign may be used for the contest. Listen for them from Reykjavik March 26 to April 2 signing TF/their special call/P. They will try to operate during the afternoon of March 28 from Westman Islands with the TF7/ prefix and /P suffix. Check 14260 kHz and other IOTA frequencies.

BELIZE, V31. Vic, KI6IM, and John, N6YRU, will operate V31DX in the ARRL SSB DX contest from Ambergris Caye. QSL via AA6BB.

PALMYRA ATOLL, KH5. There have been reports of an article in the Monday, February 12, Pacific Daily News newspaper in Guam reporting a Honolulu family selling the atoll to a New York firm. This firm is supposedly interested in the atoll for scientific research and hotel development.

SINT MAARTEN, PJ7. Ron, ND5S, xyl Sue, KF5LG, Bill, AA8GL, and his xyl Dorothy, KB8ZXO, will sign /PJ7 from the Sapphire Beach Club February 25 to March 9. They will be in the ARRL SSB Contest the first weekend in March. They hope to have a special call sign once they get to the island. QSL via their home calls.

ANGUILLA, VP2E. VP2ES by KC0ZC, VP2EZ by WA0PUJ, VP2E/N0ZSU and VP2E/KL7YL are some calls you should be hearing February 28 to March 6. During the ARRL SSB DX Contest listen for VP2E. QSL individual efforts via home calls and VP2E via KC0ZC.

THIS WEEKEND ON THE RADIO. For details on the UBA and YL-OM CW contests, and CQ WW 160 Meter DX and REF French phone contests, check page 105 in January QST. Also on tap for this weekend are the CZEBRIT QRP Contest, North Carolina and Winter QRP QSO Parties and RSGB 7 MHz Contest. More info appears on page 108 of February QST.

Getting the transmitter under some power lines, around water, and/or
horizonally polarize (if its UHF/VHF) all helps "scatter" the signal.

In our rules, the transmitter and antenna(s) location cant change after
the hunt has started, but a Yagi or quad are allowed to be moved on their
axises. If you are allowed to do this, used in combination of different
power settings, it would surely slow them down. :)

We had a guy who used 3 different antennas (Yagi, Cube quad, horizonal),
2 different radios, total of 6 different power settings, under some high
tension electrical wires, next to a large river. Between all this, he was
changing the power levels, and "spinning" the Yagi and quad while
transmitting...talk about a hard signal to chase!

Take care.

Michael O'Brien (obrien@Aero.org) wrote:

: Does anyone know of a repeater that covers Death Valley and the
: Panamint?

We were just out there last month, and I could not hit anything, at least with an HT. Got up on some high land at Zabriskie Point and tried to hit Lower Potosi in NV, but no go.

Our RACES group usually participates in the Baker to Vegas rally each year, and I understand that they set up a portable repeater at one of the high passes along the route, which shows a lack of existing facilities out there.

Even from Zzyzx, near Baker, the only repeater I could hit was Lower Potosi.

If anyone knows otherwise, I would be interested in knowing, as we go out to Death Valley about once a year.

What the heck is the problem? Any ham in his senses would not apply for an antenna mast if not 100% assured (best in written) that this would pose no problem. Ever heard that a FLAGPOLE had been objected? Why not make that flagpole sturdy and high, and if some antenna(s) fits under the flag, well .... put the flag up first, and add the antenna later. There is no restriction whatsoever on flagpoles :))

The absolute best source, IMHO, is to call Polyphasor Corporation at
800 325 7170 or FAX 702 782 4476 and ask for their LIGHTNING/EMP and
GROUNDING SOLUTIONS catalog. It should be free.

I've seen the ARRL bulletin on this...they say that any limit on towers to less than 70 feet should not be allowed.

I agree, however, it is a shame that they used "feet" for the measurement...had they said something like 25 meters, then the metric ignorant zoning commissions might think that it was not too high and comply without argument...and we would get an even taller tower. :-)

I guess hams don't have any problem with cellular towers, commercial TV station towers, water towers etc. in their neighbors' yards either. Even if I did find them aesthetically satisfying, I know for a fact that my neighbors don't, and I'd rather have their goodwill than carry my hobby.to its extreme. But I know that this isn't the official ham position...the ARRL says so!

My external modem drives my HT nuts, while my two Macintoshes are
pretty well behaved by comparison. It doesn't seem to matter if I'm
online or not. The offending modem is a US Robotics Sportster 14,400.

I'm still looking for an Icom IC2A/AT or equivalent handheld
2m radio. I've got a solar-powered project for which I need
a radio with low current drain while in squelched receive. The
Icom fits the bill, at about 20ma receive current.

Other radios would be acceptable, if they're fairly low-power.
I'm looking at non-2m-radio solutions, but this would be the
simplest way to do it, since I'll need to transmit intermittently
as well. Got one you want to sell? Send me mail!

Crystal-only types are fine too, since this will be a fixed-
frequency application. I'm not looking to spend huge dollars
here, but the radio doesn't have to be beautiful, either.

>a service. Now don't worry, I am not going to purposely bore you with a
>history lesson. Suffice it to say that as far as I can tell ham radio
>started because people wanted to experiment with radio.

All sorts of people wanted to experiment with radio. Hertz wanted to
experiment with radio, Marconi wanted to experiment with radio, DeForest
wanted to experiment with radio, Armstrong wanted to experiment with radio,
etc, etc, etc. Even backyard scientists wanted to experiment with radio
(though the demarcation between backyard scientists and professionals
wasn't nearly as sharp in those days).

>If I am understanding you correctly we do agree on one thing: that is when
>people find something good the government finds some way to pervert it;
>hence the service part of the FCC regulations. Note: we have similar
>regulations in Canada where each ham is a servant of H. M. the Queen.

You certainly are *not* understanding me correctly. I don't think the
government has perverted the amateur radio service at all. Indeed, I'd
suggest that the only reason that there *is* an amateur radio service
is that government has preserved and fostered it because government
sees the benefits to the national and public interest that the amateur
radio service provides.

>Thus I separate Ham radio from "Amateur Radio Service". In some ways amateur
>radio service is a tax we pay for being hams. Perhaps if we did not have
>and official "bureaucratic" raison d'etre we would lose even more of our bands
>to commercial interests. (History lesson ~2 (yawn): If I am not mistaken

>amateurs used to have all the bands above 200 kHz because they were considered
>useless.)

It's true that in the early days of radio, amateurs were given the
"useless" frequencies because radio amateurs were considered
useless nuisances. But that changed after WWI when governments
began to realize the value that amateurs provided to their nations.
After that time, valuable and useful bits of spectrum were reserved
for the amateur service, even though commercial interests wanted
them desperately, because the governments saw value in the amateur
radio service.

>My original point was that ham should not be solely about "the biggest",
>"the farthest", "the fanciest" etc. For me it is about learning about how
>radio works. Perhaps if electronics were my formal training or my profession
>I would have less interested in building radios because it would seem like
>work. My training is in computers and because of this I am not terribly
>interested in packet at the moment ;-)

Self-training and experimentation are cornerstones of the amateur radio
service, as spelled out in the ITU definition of the amateur radio service,
and represent primary value to the national and public interests of the
nations supporting the amateur radio service. This self-directed learning
laboratory called the amateur radio service provides its primary benefit
through raising the technological skills and knowledge of a segment of
the population without need for government funds or government mandates.
This self-trained pool has proved itself useful to nations in time of
war, and this self-trained pool has proven itself valuable in the
development of technology. You are fully fullfilling the purpose for
which the amateur radio service was established by your self-motivated
and self-directed desire to learn about how radio works.

>In reading your earlier comments and some of your other posts I must admit
>I am not quite sure why you got into ham radio. But I would be interested in
>finding out. I don't think I personally would enjoy the army. If my ham
>radio license ever begins to make me feel like I am in the army I will
>probably give it up in exchange for other means of communication, although
>by then the internet might just be another part of Bill G.'s empire ;-)

I'm a radio amateur because I enjoy learning and experimenting with
wireless communications technology, and the amateur radio service
offers me an unparalleled learning laboratory in which to do that.
If being a warrior were what I enjoyed, I'd be in the Army. If
collecting meaningless wallpaper were my passion, I'd be marking
my time in University. We all ultimately do what we want to do,
whether we consciously recognize that or not.

>In regards to the government imposed service part of ham radio, I do not mind
>helping others. Although I am disappointed that governments have made it
>a requirement, it is something I would be willing to do anyway. I am
>sure others may differ in their opinions about these regulations.

Brian, I don't think you grasp how you are being of service to your nation and the public simply by learning about technology. One of the most important things a nation needs is a populace literate in important technologies. You are performing the service the amateur radio service is supposed to fullfill by learning and experimenting. If you happen to *enjoy* doing that, so much the better, because you certainly aren't being paid in any other coin.

Hi,

I am wondering if anyone can help me. A HAM friend of mine recently had one of the following implanted to help control his heart rate. This is not actually a pacer unit but should be similar. Along with the AICD unit was a warning to avoid close proximity with HAM radio equipment. Does anyone have any experience with one of these things and could give me some feedback to confirm or allay any fears my friend might have? Thanks.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z FEBRUARY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 FEBRUARY AND FORECAST FOR 24 FEBRUARY - 26 FEBRUARY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 22 Feb
Daily Proton Fluence >1 MeV: 8.5E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.1E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Feb 25 Feb 26 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Feb: 74/11
COMMENT:

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 22 Feb
Learmonth 11 2223 3422
Fredericksburg 14 9
Planetary 10 7

Observed Kp for 22 Feb: 2331 0111

2B. MAGNETIC FORECAST
Date Ap Conditions
24 Feb 7 Quiet to unsettled
25 Feb 8 Quiet to unsettled
26 Feb 8 Quiet to unsettled
COMMENT:

3A. GLOBAL HF PROPAGATION SUMMARY

>FCC building in San Francisco. So hope that helps some

I took my Novice in 1965, and Tech in 1965, and General in 1966, and
Advanced in 1967, and never ever ever did I have to ever draw any
diagram of any sort for any test. I am not aware that there was any
requirement for drawing in the 70's.

Jim, read my comments as many times as I might, I still don't see a single
reference to Part 97 or the FCC in there. The amateur radio service is
ITU chartered, not just subject to some parochial charter. The ITU defines
the Amateur Service as "A service of self-training, intercommunications,
and technical investigations carried on by amateurs..." It is true that
the US Communications Act of 1934 states plainly that such activity
is considered in the national and public interest. I'm not familiar with
the justifications stated for the existence of the service in Canada
or other nations since I haven't seen the enabling legislation. However,
I think I'm safe in saying that the service would not have received the
long support it has had worldwide unless there was some recognition that
it offered benefits to the national and public interests of the countries
who authorize it, who have set aside valuable spectrum for it, and who have
time and again supported it at ITU conferences.

I think the repetition in these headers bothers you because it reminds you of a part of yourself: boring old Burt who keeps saying the same things on this newsgroup over and over again. It's the same reason why you have to say "hams are boring". YOU are often boring.

You attack out of your own insecurity.

>hope to use for radio logging. However, the QRM from the computer
>doesn't allow me to operate successfully on most bands.
>
>Does anyone know of a simple way of eliminating this interference?

Ummm...turn off your IBM clone computer? Seriously.

I have several more-or-less modern x86 machines which all interfere with my radios more-or-less, despite steel boxes, monitor shielding, bypassing, beading, etc., etc.. The only terminal solution I've found for when the RFI is just unacceptable is to turn the bloody things off, and turn _on_ the old science: well-shielded 4 MHz Z-80's radiate a whole lot less than any of the newer, faster CPU's.

Not all CP/M machines were created equal, but my CP/M machines, Tandy Models 12 and 4p and an even slower KayPro-II, don't interfere with my radios at all. They're slow, they're self-contained, and they're pretty well shielded. This kind of hardware is cheap or free, software for it is cheap or free, and there is still enough of a support system in place that you needn't hurt for advice (yup, lots of folks still use CP/M machines, at least occasionally.)

Downside? Forget glitzy graphics, mice and multimedia. Forget media hype and new products. There's a CDROM available with some 19000 programs on it for CP/M, but if you need something special, you'll probably have to write it yourself, and (wait for it) most of the development tools you'd want to use are cheap or free. Z-80's and their ilk are still used in telephone switches and embedded systems everywhere, so it's not even a dead technology.

You will _not_ be able to eliminate all the noise from your x86 box without resorting to industrial strength, TEMPEST-style repackaging. You will be able to _reduce_ the noise from your x86 box by smart use of shielding, grounding, bypassing, filtering, etc.. Just repositioning your gear to minimize the interference can make a big difference, and you can probably live with some level of EMI without wanting to pull your hair, since your x86 is probably chewing on many frequencies you don't even care about.

But for real relief, for QRP, DX, weak-signal or satellite work, when local noise is a serious irritant, you really just need to turn it off at the source.

Cheers es 73

Regretably, Gary, you have overlayed the policy objectives of your legislation upon someone who is not operate an amateur station within the FCCs juristicition. There is little point in stating that he has to fulfill certain policy objectives of the national and public interests, when indeed there is no mention of those objectives in the domestic regulations of the this person. It is like arguing that because the US passed the 55 mph speed limit, that Canadians, while driving on their own roads, are similarly proscribed by the same legislation. They reasons justifying that legislation may be honourable, even vital, but outside of the US juristiction, they have no effect. Thus, the response, premised on US legislation, is moot due to irrelevancy.

The Canadian regulations define the amateur service as "being a service in which
radio stations are operated for the purposes of self-training, intercommunciation or
technical investifations by individuals who are interested in radio technique solely
with a personal aim and without pecuniarty interest". Being a definition, it does
not express a policy position. (In fact, Canadian law rarely does include policy
objective in its substantive provisions. There of course are policy directives,
such as in the Broadcasting Act, but these are used as general guidelines for

regulatory agencies, such as the CRTC. The only way to determine the policy for the particular law is the research the preamble to the enactments in the Canada Gazette, Part II for regulations and the Canada Gazette, Part III for parliamentary legislation), but I d. As you can see, it parrots the ITU definition. In Canada, there is no mention anywhere that it provides a service in the national and interests nor in regulations from other administrations (UK, France, Germany, Netherlands, Senegal and a few others). On the other hand, the US legislation has embodied a number of policy objectives. (I don't dispute them, they are there, as you have recently posted). Since this aspect of national and public interest, is found only in US legislation, the relevance of your original reply is questioned. I fail to understand how you can admonish, clearly with sensitivity and respect, an amateur based on policy objectives and charter purposes that do not apply to the individual. If I am mistaken that these are not expressed in Part 97. my apologises. Perhaps we are debating semantical points, rather than the substance. None the less, I do not share your views that we should avoid calling the amateur service a "hobby", or that the amusement or lack thereof, is of little account in terms of justifying its existance. Considering that it is indeed a service which is undertaken solely for personal aim and without pecuniary interest, would indeed indicate that it is a hobby. Perhaps the French word "loisir" would be more acceptable - having the sense that it is a leisure activity.

2803. Mounting detachable faceplate in car - Help!

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-23 00:00:00 UTC
From: simont@post.its.mcw.edu
Message-ID: <4gl2oj$mbt@post.its.mcw.edu>
Source record: 230274

Hi there,

I have recently bought a Kenwood TS742 2m/70cm dualbander which has a detachable face plate to allow the radio to be installed in the trunk and the contols to be up front within reach. I have the radio installed under the passenger seat and the wires from the battery are in place without any problems. I am now trying to find a way to mount the faceplate, preferably without doing anything permanent to the car.

I was wondering if anyone can give me any tips on how this might be accomplished? If I have to drill some holes somewhere inconspicuous then so be it, but Im trying to avoid it if I can. I have a Honda Civic '94.

I have seen pictures of faceplates mounted on mobile phone 'goose necks' (flexible arms mounted to the car floor) which look very neat and tidy. Has anyone used this method and how easy is the installation of the goose neck?

Thanks for anyone who can help me here.

Simon, AA9PW

Towers and lots of aluminum up in the air have always been a problem for those of us who live inside the city limits.

In an effort to co-exist with my neighbors, I've had to resort to a well-disguised long wire and antenna tuner.

Now, if I can just get a nice little place out in the country, I can get those dogs, that 125' Rohn, and that log periodic that I've always wanted.

Propagation Forecast Bulletin 8 ARLP008
From Tad Cook, KT7H
Seattle, WA February 23, 1996
To all radio amateurs

SB PROP ARL ARLP008
ARLP008 Propagation de KT7H

Solar activity is still quite low, and last week there were three days with no sunspots. No improvement is in sight. There may be a rise in geomagnetic activity around February 25 and again around March 9 through 12.

Conditions should be stable for the 160 meter SSB contest this weekend, but there may be a rise in geomagnetic instability on Sunday. Check WWV at 18 minutes after the hour. Every three hours the K index changes. As long as the K index is below three, conditions should be good.

Sunspot Numbers for February 15 through 21 were 11, 0, 0, 0, 12, 14 and 26, with a mean of 9. 10.7 cm flux was 69, 70.1, 70.7, 70.2, 71, 72.2 and 71.9, with a mean of 70.7.

2811. Info on "FISTS" organization

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-23 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <4glvha$buj@omnifest.uwm.edu>
Source record: 230282

Here's an excerpt from the Autumn '91 issue of "Morse Magnificat"...

Founded in September 1987, the brain-child of Geo. Longden G3ZQS, FISTS is now a well-established and recognised organization in the world of amateur radio. It has a membership of some 800 enthusiastic CW operators which is growing all the time. The club has three simple aims-- to further the use of CW on the amateur bands; to encourage newcomers to the CW mode; and to engender friendship within the membership. Accordingly, membership is open to all amateur CW operators and listeners, irrespective of speed and ability. A "Century Award" is available to members and non-members, including SWLs. The requirement is 100 points gained from contacts made with FISTS members world-wide. One point is gained for working members in one's own continent; two points for members in other continents; and three points for contacts with the club's own station, G0IPX, from anywhere. The award is free to members. The cost to non-members is 5 IRCs.

The annual fee for membership of FISTS is: UK: 5 Pounds;... North America: $15. A membership certificate, a begfinner's guide, a checksheet for the Century award, and a current list of members is sent to all new members...Readers in the USA should direct enquiries to Nancy Kott (WZ8C), Box 47, Hadley, MI 48440-0047.

##

Hope you found the above of use.

You might want to drop a note to :

Postmaster@Medtronic.Com

and ask him to forward a note to the customer service folks asking for any
research or data related to this problem. Certainly they would probably
know more than the anecdotal information the rest of us might be able to
provide.

Good luck!

SB QST @ ARL $ARLB013
ARLB013 Question pool committee

ZCZC AG92
QST de W1AW
ARRL Bulletin 13 ARLB013
From ARRL Headquarters
Newington CT February 23, 1996
To all radio amateurs

SB QST ARL ARLB013
ARLB013 Question pool committee

ARRL Executive Vice President David Sumner, K1ZZ, advised FCC Private Wireless Division Chief Robert H. McNamara on February 23, 1996 that the mechanism to maintain question pools for FCC Amateur Radio examination elements has broken down and no longer operates as FCC rules require. ARRL wants the FCC to issue a public notice to that effect, clearing the way for the creation of a substitute mechanism.

The League s request stems from last year s decision by a majority of the Volunteer Examiner Coordinators to incorporate a previously informal organization as National Conference of Volunteer Examiner Coordinators Inc. ARRL/VEC and some other VECs chose to not participate in the corporation. At that time, Sumner emphasized that ARRL Volunteer Examiner Department Manager Bart Jahnke, KB9NM, would continue to participate with other VECs on issues of common interest, and that the League did not want to change the cooperative relationship that existed between the ARRL and other VECs. NCVEC Inc later removed Jahnke from the question pool committee (QPC), which had been the mechanism for VECs to cooperate in maintaining question pools for written ham radio examination elements.

In October, FCC Wireless Telecommunications Bureau Deputy Chief Ralph Haller confirmed that the NCVEC has no recognition in the Communications Act or the FCC Rules, and that the FCC views each VEC individuaIly. He said the FCC expected all VECs to be able to participate in question pool activities. In December, the FCC s McNamara asked NCVEC Inc president, Dalton H. Tunstill, WB4HOK, to immediately reinstate the ARRL/VEC to a seat on the QPC. The conference so far has refused, but stated that, if certain conditions were met, Jahnke would be eligible for election to the QPC when the conference meets in July. The League now formally requests the FCC to advise Tunstill that the question pool committee operating exclusively under the NCVEC Inc is no longer the mechanism through

which question pools for Amateur Radio Service examinations are maintained and to issue public notice to that effect.

The League asks the FCC to terminate its agreement with any VEC that took part in the decision to exclude the ARRL/VEC or other VEC from cooperating in the maintenance of the question pools, as their action violated Section 97.523 of the FCC s rules. The League has invited all VECs to cooperate in creating a replacement Question Pool Committee, which would be open to all FCC-recognized VECs.

The ARRL said its exclusion from the QPC caused material appropriate for study by prospective Technician Class applicants to be left out of the Novice (element 2) and Technician (element 3A) syllabi the committee released February 1, 1996. The present syllabi are not acceptable to the ARRL because study guides prepared for these examinations won t include the missing material, and applicants won t be tested on it.

The ARRL said its exclusion also resulted in errors in the revised question pool for the Amateur Extra Class written examination, element 4B, released by the Question Pool Committee December 1 for use starting July 1, 1996. The League said VECs can correct this by simply not using the defective questions in their examinations.

The ARRL/VEC coordinates approximately two-thirds of all FCC Amateur Radio examinations.

Special Event Information

HamDaze at Arizona Science Center: The Center for Amateur Radio Learning (C.A.R.L.) will be hosting HamDaze Weekend March 23-24, Several Phoenix area radio clubs will be setting up hands-on demonstrations and exhibits. Amateur Television, an HF station and a two way laser communications device will be just some of the attractions at the event. A test session will be available for the No-Code Technician License at 10:00a.m. on Saturday March 23. KC7LUL will be on the air in the phone portion of the novice 10 meter band, and general 15 and 20 meter bands. For a certificate send a QSL and 9" x 12" SASE to C.A.R.L. P.O. Box 51048 Phoenix, AZ 85076-1048. Visitors to ASC will be able to make radio contacts under the supervision of licensed volunteer operators. The Arizona Science Center is located at 147 E. Adams. The hours are Saturday 9 - 5:00pm and Sunday 12 - 5:00. Adults $4.50, Seniors and 4-12 yrs old $3.50, 3yrs and less are free. For details call 561-8405.

>masking' is a function of both frequency and bandwidth?

Sorry for the delay in getting back to you. I was trying to hunt
up the article where I read about this, but it's a lost cause, my
"filing" system is hopelessly confused. Anyway, from memory, where
this tidbit was found was in an article explaining DSP noise reduction
systems. There are basically two ways to do noise reduction, and one
of them depends on the psychoacoustic noise masking effect, which
apparently works like FM quieting in this case. That's not much of
a lead, but its all I have on this.

>-----------
>
>However, I've been reading about a technique of increasing signal
>detection
>>sensitivity by *adding* noise to the signal (it has something to do with the

>>is assigning that a tonal value. In other words, the tone is actually a
>>psychosomatic response to the change in signal+noise. Something to think
>>about anyway.
>
>Where did you read this? I would be interested in reading it also.

Now I at least know *where* I read this. This was an article in
Science News reporting on noise injection as a method of enhancing
weak signal detection. Now I don't normally save back issues of
Science News, but I recall saving this one because of that article,
but I'll be darned if I can find it around here. It was in the last
few months.

One of these days I've *got* to get my filing system organized. :-(

These are pretty sorry leads, and I'm sorry about that, but it's
the best I can do without bringing in a forklift and working through
the piles of paper that have accumulated around here.

Gary

2817. repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-24 00:00:00 UTC
From: jimmi.martin@index.COM
Message-ID: <9602240256.044EF02@index.com>
Source record: 230195

I'm writing this evening to get some info. on an article I downloaded from a bbs last week. It was about building repeaters, from vol. 94 issue 9.
I'm trying to find out if there are any diagrams that I can get to go with these instructions. Also I was wondering if there are any other radios that can easily or not so easily be converted to a repeater?

Thanks,
Jimmi

2818. Icom R-7000 repair help!

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-24 00:00:00 UTC
From: greg@core.rose.hp.com
Message-ID: <Dn9s9A.G5x@icon.rose.hp.com>
Source record: 230196

I have an Icom R-7000 receiver which has freaked out. Turn it on, and the display goes nuts. It has a mind of its own, blinking and switching bands and modes. Quite a sight to see, but not very functional.

My first thougth was that my recent replacement of the memory backup battery broke something, but I seem to recall that the DC-DC board had some sort of design problem with an underrated capacitor. I can't find a reference to the exact fix in my files; does anyone have a copy of the relevant info?

Thanks!

Most radiation comes from the cables which are connected to the computer, ie keyboard, printer, display. You can sometime use ferrite beads on these or use shielded cables which are well grounded to the computer chassis. Unfortunately the typical clones are the worst offenders for EMI. Also, make sure that none of the cable which come out of the computer are close to your antenna coax.

I thought about another 'real rotten one'. The local guy who is 'the king' of fox-hunting for about the last tens years pulled the best. He used a dual band HT, stuck it in a hollow in a tree about a half mile from his house. Cross band repeated into it, and was drinking a beer while everyone ran around for hours in the park. It was a dandy. One good thing to remember is, when some of these folks don't find you, they take it pretty hard. Last year, it was about 100 degrees when my son and I were foxes at another event. We had Cold Watermelon for the hunters as they checked in. They all thought that was pretty cool.

A couple of years ago I rented a big Ryder (aluminum) truck, stuck a 13B2 in the back, aimed it across water towards the side of a big condo building. People pulled up right next to the truck, a got a bearing off the condo (2 miles) rather than off the truck (20 feet). As you appoached the building, you got a very strong signal off the building until you got very close, and then the dopplers would go nuts, signal bouncing everywhere. People with beams seemed to do a _little_ better, probably because they took fewer readings. No one found me till I started giving pretty obvious hints. Besides the obvious narrow beamwidth, the point here is that there are all kinds of urban objects that people never give a thought to...like a Ryder truck in a parking lot!

Have fun.

Nice to see Drew suddenly become so involved with legal issues of amatuer radio. Gess it beats advocating the
destruction of other person's property (IE: pinning coax and ripping down towers and parking a simplex
QSO on repeater freq's).

Keep it up Drew, you may be OK after all

steve

P.S. hello Chris (OSU rules!!!)

call sign update

I am curious.
I received my KB8YVN call sign last spring. I watched for my sign to show up in QST, but it never made it. A friend of mine checked the latest updates a few months ago to see if my sign had made the list. It never did. I was wondering how this is done. What is the selection process in selecting new callsigns.

What happened to 4, 3, 2, and 1.

The system seems to have built-in confusion factors!

You say 9-10 is "Pristine". Well -- 10 is "new in the box".
Also, 9 is listed as "excellent".
So, when I list something as 9-10, do I mean "New', "Pristine",
or "Excellent"?

Whew!!

Maybe we should just use words. Is this a government plot?

It really bothers me to stop at 5.

How about at least going on down to 1.

4. Run over by a tractor.
3. Run over by a small car.
2. Has been used occasionally for target practice.
1. Has been used a lot for target practice.

Great idea!!!!

Hi Siegfried and other readers !

Our licenses here are called CEPT Licences. There is no more need to
apply for a reciprocal licence if travelling to annother European coun-
try which has joined the CEPT agreement as well, most Western European
countries did so and even New Zealand joined the CEPT Standard.
There are two licence classes only, '1' (code, all ham-bands) and '2'
(no-code, UHF/VHF only).
Just add the appropiate prefix of the country you're staying to your
regular callsign, i.e. when i travel to Sicily/Italy i can use IT/DF1HX/p .

Just an SWL's view... There is a lot of interesting qso's goiing on on
the ham radio bands. You only need the patience to listen. More often
than not I wished I had done my lic, when I listened, but then I figured,
that some of the interesting qso's might not have been what they had
been, if another guy might have been in.

Understanding starts with listening. And with reading when it comes to
newsgroups. A little tolerance, by the way, would help a lot on the
newsgroups like this one.

Help! ;-)

I'm new to DX'ing, and I just had a contact with:

TM1C (he always added the word "contest" or "QRZ")
14.216.5 MHz USB @ 20:19 UTC (Saturday)

He asked me for my number, so I gave him 001. BTW, he always said "5935"
to all contacts (including me).

*** Question: how do I QSL him?! ***

He's not in the 1996 Callbook (it goes from TL to TN, omitting TM). Do
any of you have an address for him?

Please respond directly to my email account (pillera@aol.com), as I don't
get a lot of chances to use my newsreader.

Thanks!

2842. HISTORY OF THE YAESU FT-101 ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-24 00:00:00 UTC
From: Bill <debral@falcon.cc.ukans.edu>
Message-ID: <1996Feb24.210102.114751@kuhub.cc.ukans.edu>
Source record: 230220

Can anyone out there provide some info on the Yaesu FT-101 series?

Specifically:

* Production start
* Production end
* Total units sold (all versions)

Also, does anyone have any idea why we don't see more of these listed for sale in the "used" marketplace? Yaesu must have sold thousands of these units. I figure, they're either very good and everyone is holding on to them, or they all fell apart a few years back and now there are very few left for sale. :-)

Looking forward to some interesting reading!

The TS-820S that I had only required the DS-1A (2 Transistors & Heatsink). The
original transformer had separate winding for the DS-1A. Worked very nicely.
I wanted to build my own, but could not find the transistors at the time

The following is a QST

Ham radio faces Mother Nature in the Pacific Northwest and the Dayton CBer arrested for TVI speaks out. These stories and more on Newsline report number 967 coming your way right now!

(*****
NORTHWEST STORMS

As flood waters receded in the Pacific Northwest, ham radio operators continued their efforts to provide relief workers with emergency communications.

For the third time in as many months, the pacific northwest has been
hit by the forces of nature, and amateur radio was there to help. After high winds in December and ice storms in January, early February saw a period of relentless rain that caused many rivers in northwest Oregon and southwest Washington to swell past flood stage. Even as the President was making his rounds of the stricken area, hams were active in their ARES and races support roles.
We spoke with Lew Williams, WB7NML, who is the ARES Section Emergency
Coordinator, who told us that numerous county ARES and RACES Programs were involved.

"There were probably 19, no 21 counties that were activated, and there
were, I don't know, 4 or 5 others that were on standby." Williams

The extreme flooding posed many problems for both amateurs and rescue personnel alike. Lew described some of the difficulties for us.

"There were situations that were where hams were helping out with four wheelers. They had to, you know the people with four wheel drives that were helping on evacuations, etc. Wasco County, they lost all their roads. The streams wiped out a bunch of the roads and they had to evacuate the nursing home with snow cats, would you believe." Williams

Hams linked rescue workers in the field to local eoc's, as well as linking the eoc's's together, and to the state emergency operations center as well. This was not always easy, as many of the facilities had their own problems.

"The main generator failed and they brought in another one and it almost went down so they were almost, in that particular incidence were almost relying on the hams because of their portability." Williams

Hams involved in the emergency knew how to adapt when things didn't

go well. Generators weren't the only equipment to fail. Some of the radios didn't fare so well either...

"The HF radio in the particular EOC'S wouldn't operate and so they were operating portable out with the VHF out to someone with HF to maintain contact with the Oregon Emergency Management Division." Williams

Even with the difficult conditions and equipment failures, Lew says

that northwest amateur radio operators came through when needed. Lew says that the lessons learned by the hundreds of amateurs involved in the disaster will be evaluated just as if this had been a training exercise, and the information will be put to use refining the state's

emergency communications program to further improve the hams service to the public.

It's been an exceptionally wet winter in the Pacific Northwest. More storms are being predicted and hams could be kept busy until spring.

(*****
MOTOROLA to IARN: RETURN OUR GEAR

The International Amateur Radio Network has been asked to return a 150 MHz Motorola repeater, a dozen handheld radios and a power generator loaned to the Red Cross by the IARN in the aftermath of Hurricane Marilyn. The W5YI Report says that Motorola wants the equipment back so that it can be replaced in the company's emergency inventory for future use.

(*****
ELECTRONIC RENEWAL

The FCC will not renew your license electronically. So says the ARRL's Regulatory Information Branch in response to several recent queries. The League says that you can now download the Form 610 from the FCC fax-on-demand service or from the FCC's home page on the World Wide Web.
The FCC now only renews a ham radio license if an application is received within 90 days before or two years after the expiration date. It will not be renewed if submitted earlier. And, if you apply for renewal after your license has expired, you may not operate until the application has been processed.
As announced last year, there is really no good reason for a person

not to renew his or her license prior to expiration. Since last fall, the FCC has been sending out a mail in reminder called Form 610-R. You should receive it at least 90 days before your ticket expires. If all of the information is correct, you just need to sign the form and return it. If for some reason you do not get a Form 610-R, a regular Form 610 is okay to use.

(*****
DAYTON CB'ER SPEAKS OUT

A Dayton, Ohio area Citizens Radio operator who was jailed for causing TVI says that his neighbors never really complained about TVI before calling in the local police. Is this a case of an over zealous police department or is it justice gone sour? Amateur News Weekly sorts out the details in this half time report:

"On December 9th, 1995 a Morrain, Ohio CB operator, Steve
Hollbrook
was arrested for causing interference to his upstairs neighbors. He was charged with interfering with a public service, a third degree felony with no bond and was held in jail until Monday, December 11th

when the Montgomery County Prosecutor declined to press charges. On Wednesday, February 7th, 1996 Steve Hollbrook appeared in Kettering, Ohio Municipal Court where the case was transferred, due to a conflict of interest of a personal nature with officials in the Morrain City government. The charges of interfering with a public service were dropped, apparently because these matters were beyond the city of Morrains jurisdiction. However, part of the original complaint had to do with what Mr. Hollbrook said over his radio in reference to his neighbors. On the basis of those words, which the neighbors taped from their TV, the Morrain City Prosecutor decided with the legal action. Officials offered Mr. Hollbrook the opportunity to plead to a reduced charge, a minor misdemeanor. After consulting with legal counsel, Mr. Hollbrook pleaded guilty and was fined $100 plus court costs, with $50 of the fine suspended.
Steve's reason for pleading guilty was to get this matter over with.
So he could move on and examine his options toward the future. He is currently consulting with his attorney and declines to be more specific as to what his options may be.
One of the things Steve remembers the most is his approximately 48 hours behind bars for this incident. To this day, he is still not entirely sure why things went as far as they did.

"You know, like I said the whole weekend, sitting there. I kept asking myself, Why am I here? And you know my wife kept telling me you are in the right, just be patient. You know it is hard to be patient when you are sitting there behind these bars." Hollbrook

There are many twists and turns behind the scenes in this story. According to Steve, when he originally installed his CB, his wife checked with all the neighbors in the building to see if anyone was experiencing interference. When that proved to be the case, some antenna work was done, additional filtering was installed and offers were made to supply filters to the neighbors if the problem reoccurred. That offer was never taken up by anyone. Because until the day of his arrest, Steve claims that at no time did anyone in his building ever complain to him about interference. His neighbors comments that interference had been going on for two months to the police leave him totally baffled to why they never spoke to him or his wife about the problem.
The case has been settled to the satisfaction of the City of Morrain.
Whether everything has been settled to the satisfaction of Steve Hollbrook remains to be seen. Steve is greatly appreciative to the local amateur community and to the American Radio Relay League for informational assistance and moral support during the case.

As an aside, Steve Hollbrook told Charlie Kotterman that he really enjoys electronic communications. And as a result of the support shown him by the Dayton ham community, he is already at work studying to get his own amateur radio license.

N6NHG ARRAIGNMENT AGAIN DELAYED

The arraignment of alleged computer hacker Kevin David Mitnick, N6NHG has again been delayed. Several Los Angeles news outlets reported on February 20th that Mitnicks' arraignment will likely occur at the end of March. This, according to Assistant U.S. Attorney Christopher Painter will indicates that this will give lawyers more time to try to reach a plea agreement.
Mitnick became a federal fugitive in 1992 when he violated the terms
of his probation by leaving Southern California. He was arrested last February in North Carolina, after federal investigators tracked him to a rented apartment near Raleigh.
U.S. District Judge Mariana Pfaelzer is presiding over Mitnick's Los
Angeles case and will probably preside over his North Carolina case as well. Under federal guidelines, if Mitnick pleads guilty to the North Carolina charges in Los Angeles, he may be sentenced by a local judge. If he pleads not guilty, he will be sent to North Carolina for trial.

(*****
HAM RADIO FOILS THEFT ATTEMPT

And two Kansas hams are heros after stopping another kind of computer
crime. Zachary Canright, KB0GMC, and Beryl Masters, WB0EJJ, recently helped police in Overland Park, Kansas, nab three teenagers trying to make a getaway with $7,500 worth of computers allegedly stolen from a local store. Canright's attention was first drawn by the teens' peculiar behavior as they loaded the computer equipment onto a truck. He then noticed the vehicle had no plates and used his mobile radio and a local repeater to contact Masters. Masters directed police to a shopping center lot where Canright had followed the youths and witnessed them attaching plates to the pickup. Police arrested the three teens and charged them with felony theft.

(*****
BOSNIA RADIO

Hams have assisted the Army test a Bosnia-bound mobile AM radio station. Fred Cresce, KC4MOP, Steve Ickes, WB3HUZ, Ken Moffat, N3EAR, and Paul Courson, WA3VJB, staffed a new mobile Army Broadcast Service station at Fort Meade while it operated on 1670 kHz and identified as ABS Radio.
Regular listeners to Newsline probably recognize the name Paul Courson from reports he has done for us. In real life, Paul is a broadcaster with Dow Jones. He tells Newsline that the station took to the air on February 5th and operated around the clock for several days. He says that he and the other hams were brought in to help specifically because of their interest and experience in using AM on the amateur bands.
The 5000 watt ABS transmitter went on the air using a 150 foot high

vertical antenna the hams helped set up and tune. The station broadcast from Fort Meade until February 9th. It was then packed up for transport to Bosnia. There it will be set up to entertain and inform US troops stationed with the peace keeping force.

(*****
NEWSLINE JOINS TAPR AUDIO WEBSITE

Tucson Amateur Packet Radio has added Newsline to its audio site on

the world wide web. According to Greg Jones, WD5IVD, all bulletins on the system are encoded using Real Audio type technology. Greg says that he plans on keeping the weekly announcements on the system for sometime.
The Universal Resource Locator for the TAPR web site is a long and complex one so we won't try to give it here. To get it, drop a note to Greg via the internet to:

gjones@tenet.edi

(*****
TWIAR BACK

And a belated welcome back to the satellite to our friends in Albany,
New York who produce "This Week in Amateur Radio". The program returned to satellite distribution on Saturday, January 27th.
This Week in Amateur Radio is carried by the "Tech Talk Network" on

Telesat Canada Anik E2 communications satellite. The network will utilizes transponder 18 with 5.8 MHZ wideband analog audio. Anik E2 is located at 107.3 degrees west longitude in equatorial geosynchronous orbit and provides excellent coverage of North America with spot beams aimed at Alaska and Hawaii.

(*****
KITSAT HOT

In ham radio space related news, AMSAT North America reports that Kitsat-Oscar 23's transmitter efficiency went down during January because its orbit configuration offered no eclipse period and no time to cool down. The additional heating resulted in a degradation of efficiency.
KO-23 is a packet store-and-forward satellite. The spacecraft is a

cooperative effort between Korea and the University of Surrey in the United Kingdom.

(*****
DECLASSIFIED LAUNCH

The February 1996 issue of Popular Mechanics includes a feature article by Philip Chien, KC4YER on the now declassified Corona spacecraft project. In his story, Chien notes that the very first OSCAR satellite was a piggyback payload on the Discoverer 36 mission,

which was actually the cover name for the Corona series of spy satellites!
The article includes a fairly good artist's rendition of what the Agena upper stage looked like in space. From what Phil understands, the OSCAR payload was attached to the launch vehicle in place of where ballast would have normally been.

(*****
VATICAN BEACON

From the international desk comes word that a new 6 meter beacon is

on the air from Vatican City. On Sunday, 4th February a new beacon was activated from the location of HV3SJ. Its operating frequency is 50.004 MHZ, shifting 800 Hz upward depending on temperature at the site. The power output is 10 watts to 5 element Tonna beam aimed towards the United Kingdom. An omni will be installed as soon as weather allows. This beacon should be of particular interest as no beacon has been active from Italy on 6 meters until now.

(*****
DX

In DX, 9J2BO is quite active from Zambia on all bands. Look for hi,
on 3.505 MHZ at 04:15 UTC and 10.103 MHZ at 05:20 UTC. QSL to:

Brian Otter
P.O. Box 34554
Lusaka, Zambia

Effective immediately, requests for any of the 4U1UN cards or any of
their special callsigns such as 4U50UN should be sent to WB8LFO. The use of the W8CZN mail drop has been discontinued.

And T30DP is currently on Kanton Central Kiribati. Reports indicate
that he will be active as T30DP/T31 on 20 meters only. QSL via VK4CRR.

(*****
NEW CALL - OLD CALL

And finally, this from Dick Flanagan, W6OLD who reports the story of
Dick Creley, KB7UUK, a ham who wanted a new call sign. Not wanting to wait for the FCC's Vanity program to arrive, Creley started working his way through the General and Advanced requirements in order to qualify for one of those nice 2 by 2 Advanced callsigns.
Well, we are glad to report that he made it! The former KB7UUK now

has his new call. Want to guess what it is? Try KJ7UK.
Makes you kind of wonder if the FCC's computer isn't programmed

with a
strange sense of humor.

(*****

And for this week, that's all from the Amateur Radio Newsline. You

can write to us at:

[Well, this is all that arrived for posting...]

VK2 WICEN News

WICEN News

WICEN (NSW) is pleased to announce that it has now joined the Internet proper. Things are still up in the air at the moment, whilst a few Web links get sorted out, but in the meantime we would like to announce that, as usual, VK2 has taken the lead, and has registered the domain "wicen.org.au". Those other States wishing to partake are invited to contact WICEN (NSW), to have their own State sub-domain delegated to them. Further details, such as e-mail addresses etc, will be given in a later broadcast, but for the time being, the Web-aware can use "http://www.wicen.org.au/" as a starting point. Full credit for this goes to Mark VK2XGK.

A number of events next month have changed, so please listen closely...

The WICEN display for the Central Coast Amateur Radio Club Field Day next Sunday is now being co-ordinated by John Cannon VK2JRC. All listeners please note: don't forget that WICEN will be raffling a "Green Slip", generously donated by the NRMA; you don't have to be a WICEN member to partake in this, so if you are wondering how you are going to pay for your vehicle insurance this year, just drop in to the WICEN display and buy a ticket or ten -- all are invited. It is expected that the raffle will be drawn in May; there will also be orders on a leading electronics retail firm for second and third prizes. Another exercise next Sunday is the Mid North Coast Horse Enduro, although we have no further information on this.

The annual Bungonia Cave Rescue event, on the weekend of 16-17th March, is now being co-ordinated by Dave VK2KFU, due to the potential unavailability of the aforesaid Mark, and Dave requires around sixteen to twenty people, as this event promises to be the biggest yet, with ten teams in the field. Those who think they can demonstrate their communications skills, under somewhat difficult circumstances, are invited to contact him; don't worry -- you will not be required to go underground, although the possibility exists for those so inclined. The potential for publicity here, before various emergency services and the public, should not be overlooked. Again, the annual Bungonia Cave Rescue exercise this year promises to be the biggest ever; please contact Dave VK2KFU if you want to help. As befits WICEN's Internet status, up-to-date information will be available via the Web page.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.wicen.org.au/".

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the February issues of the various magazines.

"Electronics Australia" discusses the alleged link between cancer and electro-magnetic fields, and of interest to the CW brigade is the revelation that pulsed fields are "worrying" (this could explain a few things -- maybe Wayne Green was right as usual); those confused by the draconian Austel regulations about modems etc will find little solace; the series on op-amps continues, along with a question as to whether they are really suitable; the life and times of the late Dr. Ernest Benson is continued; the final part of the dual battery controller, of interest to WICEN members, is presented; and ancient telegraphy systems are described.

"Silicon Chip" builds a basic logic trainer; an automotive dashboard alarm is constructed from a toy yuppie-phone; those with an eye to the future may like to read up on the world's first magnetic levitation train; the Dog Blaster Mk 2 is built; couch potatoes can build not one, not two, but THREE remote control transmitters; those who think they drive better after they've "had a few" can check the error of their ways; and reflex receivers, very popular in the early days, are discussed.

"Radio and Communications" describes the various terms used with weather satellites; the first part of an actual construction project, a general coverage HF receiver, is described; the usual array of transceivers goes under the surgeon's knife; aircraft enthusiasts will find a story on air-racing of interest; the Australian Band Plan is concluded; and the fine art of measuring receiver sensitivity is discussed.

And if you are wondering what happened to "Amateur Radio" this month, well frankly, at the time of writing, so were we! We understand that yet another palace revolution has delayed its printing, so hopefully we can review it next week, where due to the Field Day there will not be much of an audience anyway.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

NEWS BRIEFS

The UK Department of Transport is planning to introduce a digital radio service in the next two years, to provide British motorists with round-the-clock traffic information anywhere in Europe.

The new service, called RDS-TMC (Radio Data System - Traffic Methods Channel) will operate on a dedicated frequency. Service broadcasters will transmit news of traffic incidents using an internationally agreed code, e.g. 202 is a serious road accident, 1303 is dense fog, 1805 is faulty traffic lights, and so on.

RDS-TMC receivers, costing around $1100, will present the data as text on a screen, or with a synthesised voice. A trial of the new system will begin next year with about 1000 fleet vehicles and hire cars.

The Chinese Year of the Pig, which draws to a close this weekend, has not been a happy one for the Chinese space authorities. At least, the pigs haven't been flying very well: as reported last week, the Chinese spy satellite FSW-1 will be making an uncontrolled return to earth in the next few weeks. This week, another Long March rocket failed to put its payload into the desired orbit. In fact, the rocket didn't make it very far off the launch pad: a photograph in the Sydney Morning Herald showed the rocket at an angle of forty five degrees before it even cleared the launch tower. The owners of the Intelsat communications satellite were reportedly displeased when the rocket and satellite exploded a few seconds later.

Still in Asia, Japanese space officials sucessfully launched an experimental vehicle as part of their space shuttle program. The vehicle successfully returned to earth, spashing down in the Pacific ocean, but sadly it sank before it could be recovered.

-- thanks to the Sydney Morning Herald and The Australian
[for the news items - they had nothing to do with the
Japanese spaceship sinking!]

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

The February meeting of the Waverley Society is scheduled for this coming Wednesday the 21st, and all members and anyone else interested in amateur radio are invited to come along.

The meeting, as usual, will be held at our clubhouse in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. where a number of members gather for pre-meeting refreshments.

Starting time is 7:30 p.m., with doors opening at 7 p.m.

It is planned to hold further Morse and theory classes this year for prospective amateurs and those wishing to upgrade their licences. Theory classes will run on one night a week over a 21 week period. Classes are open to both members and non-members, so if you are interested, please contact Raffy, VK2LRF, on 389-9188.

Simon Buxton - VK2EII - Publicity Officer

Club News: Manly-Warringah

MANLY-WARRINGAH RADIO SOCIETY

The society's monthly lecture night is this coming Wednesday the 21st. The talk for the night will be on trunked radio systems, and possibly analogue cellular phone networks as well.

As usual, doors open at 7:30pm for an 8pm start, at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, and visitors are always welcome. Call in on the local 2 metre repeater on 146.875 MHz if you need directions.

>country, I can get those dogs, that 125' Rohn, and that
>log periodic that I've always wanted.

My co-worker, K0SF thought the same. Got a nice secluded acreage
out in country. Got all the right permits. No problems from
the neighbors. Then a nearby golf course sues him because
the 130' Rohn may be a flight obstruction to swans from
a nearby wetland. (Yeah, right!)

To cap it, the major instigator on the golf course board is
a licensed ham!

2852. Just imagine: SW communications on Jupiter (probe had SW reciever)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-24 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDn9otG.E6@netcom.com>
Source record: 230294

The Galileo Jupiter atmosphere probe I heard had a SW reciever on board,
to listen for lightning discharges. According to some results I heard,
the scientists think they "heard" distant lightning via some really
long distance DX. Jupiter is not a planet suitable for people to
live on, even with spacesuits and such. But if man could figure out
a way (and an economic reason why, like the gas mine in the 2nd Star
Wars movie) one could concievely have DX contacts over much longer distances
than possible on Earth.

Just a wild thought I had......

2853. "Portable" Tx Equipment Banned in Petrol Stations (UK)?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-25 00:00:00 UTC
From: Sara Roberts <sara@x-ferret.demon.co.uk>
Message-ID: <825231438snz@x-ferret.demon.co.uk>
Source record: 230095
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,uk.radio.amateur

How can this be enforced and why?

I must admit I have not refueled in a civilian petrol station for a while,
but mobile phones and handhelds are not a patch on what our rig is equiped
with.

Do have have to pedal my wooden appliance into the station and switch of
all electrical equipement including lights before hand? Better not key down
in case my own electricals/fuel systems get annoyed.

Even when not on call out Navigation still updates command as to where
we are, whether we like it or not. Apparently the engine management sneeks
on me as well on a regular basis.

All the radios relay and repeat trunking instructions, and
our handhelds are repeated through the rig so even if one of the crew
stand off the forecourt we will radiate quite a few watts.

If we were to get a call whilst refueling our computers apparently enter a
frenzy of comms, and of course we have to respond. We even have our own
set of crew radios to argue over which candy bar they want from the cashier.

Buy law certain systems have to still be alive when we stop, so a generator,
compressor and a heat pump are always running. Plenty of EMI there.

What about other EMS? I am sure that police/fire/ambulance use and
"inadvertently" transmit other data all the time.

Surely Pumps are suitably shielded, (years ago I used to service the
Gilbarco Pumps). Don't the pumps hold a minimal amount of fuel above ground
and have plenty of protection? I used to see people smoke whilst filling
cans...

And don't mobile phones chat to the cell transmitter every now and then?
Ours eats batteries in poor receiption areas too.

Is this to protect against fire or the electronics geting confused?
(I hope I don't cause a fire - that would be a bit embarrasing).

I am having difficulties with receiving news, please could you copy your
post to my mailbox. Thanks.

Regards,

Sara.

outside of the fact that the FCC already put a form up on their website
and there's little things that can annoy paper handlers when it's not done right

and it should probably be a PDF instead since you have to print it out and for
most people the acrobat reader stuff is free...

there is this one bit of inconsistancy...as in:

In <4gmg7k$cfk@cloner4.netcom.com>, David Johanson <johanson@ix.netcom.com> writes:
>This is a multi-part message in MIME format.

I don't believe it stands for anything. It is a combination of dots
and dashs that were not used in the Morse code for any characters
and would not be confused. It isn't really the characters S O S, but
one character consisting of 3 dots, 3dashs, 3dots with no space between
them. This is only my opinion....

>anything more than the FCC syllabus, if that, during this period.
>73 Kevin
>w9cf@ptolemy.la.asu.edu

the ARRL made the license manuals from the FCC's published information plus some additional material to fill in where the authors would think there might be some holes. Odds are that you didn't see up to date procedural info because the license manuals were being written by those who had long ago passed the exams and just recalled what happened to them...instead of knowing what goes on currently....

I agree..must be hard looking at the rest of the world from down the end of your nose....

WAXED EVERYONE??

i've waxed poetic
i've seen the moon wane and wax
i've dipped wax candles
i've know some women, who during WWII were WAC's
i've seen turtle wax
i've waxed my car
i've even heard that some women wax their legs

BUT.....
how do you wax someone??

besides..no license??? amazing that any AMATEUR would even talk to you seeing that they could get in trouble..

you're real name isn't DREW is it????

cw love it or leave it

steve

things like water towers make modern life possible...odds are your neighbors might think they use a star trek transporter to get the water from the reservoir to the faucet..and that they certainly have wireless lights in their house since there's no visible wires going from the switch to the ceiling lamp...

>their goodwill than carry my hobby.to its extreme. But I know that this

70 foot towers aren't extreme -- esp if you live 100 mi from the tv station and you don't want to pay for cable..

>isn't the official ham position...the ARRL says so!
>Doug Nelson K4JGW

why should the neighbors have ultimate control over your legal use of your property? see March 1996 Playboy mag - Playboy Forum titled "Conform or Else". Amateurs just happen to have had a problem longer than most other folks but they're getting their turn in the barrel too...

who says that amateur radio must take a back seat to all other uses of a property..."Oh, you're a ham operating on 145.01 and tearing up the neighbors cable TV on channel 18 due to the neighbors using wire nuts to splice on some cable when they rearranged the house..." and the ham has to leave the air??

>x86 is probably chewing on many frequencies you don't even care about.

This is not true. It's entirely possible to construct a PC which can be contained completely in plastic, and not have it radiate. Some hardware engineers and EMI engineers actually take the time to bypass circuits and IC's properly, and don't have the EMI leaking around in the first place. Other folks don't worry about it, figuring that the enclosure will do the trick. The latter approach results in added filters, toroids on supplied cables, etc. on the finished product. These all increase the cost ultimately and never fully solve the problem.

A few cents worth of parts, and a few hours work on the designs makes all the difference.

Many PCs on the market which claim to be FCC Class B, aren't. If a random sample were pulled from the production line and placed in a proper test chamber, you'd see some ugly things...

In my shack I run a 486/100, high resolution VGA, etc., this system is connected to two other systems and a router over Ethernet. I don't have any problems with RFI from any of this. I have added a toroid here and there, but not many.

SB DX @ ALLBBS $OPDX.244
Ohio/Penn DX Bulletin No. 244

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 244
BID: $OPDX.244
February 26, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2TW, K4CEF, W5AU, KB7HO, K0BX, NS0B, WB2YQH & 59(9) DX Report, 425 DX News, DF4RD, DL3ABL, DL9GOA & DX News Letter, G4ZVJ, G4BUE & DX News Sheet, PY2XB, VE6SRC & ARLA and VS6WV for the following DX information.

4S, SRI LANKA. The 425 DX News reports that Mario, HB9BRM, will be active from March 9th to April 17th, as 4S7BRG. Mario's operating schedule will be as follows: 1600z on 14290-14320 kHz or 21270-21300 kHz and 1900-2100z on 3780-3800 kHz or 7040-7070 kHz. Mario will also be active on Amtor and Pactor. QSL via HB9BRM (Mario Primavesi, Falkensteinerstrasse 5, CH-4710 Balsthal, Switzerland).

9M8, EAST MALAYSIA. Andrea, DL3ABL, and Micha, DL6MHW, will be activate from Sarawak, March 14-25th. Their callsigns are unknown at this time, but they plan to be active on CW and SSB with operations on 40, 20, 17, 30 and 80 meters (in order of our preferences). QSL via DL3ABL, Andrea Diekmann, Bruno-Taut-Ring 56, D-39130 Magdeburg, Germany.

ARRL DXCC YEARBOOK. There have been reports that the DXCC Yearbook will be sent out in the middle of March and everyone should have theirs by April 1st.

CANADIAN SPECIAL PREFIXES. On 19 February 1996, Industry Canada Quebec Region authorised all Canadian Radio Amateurs to use special prefixes to mark the 50th anniversary of UNICEF. UNICEF is the United Nations agency concerned with the protection of children victimised by war. From 0000z, March 30th until 2359z May 30th, Canadian Amateurs may replace their normal callsign prefix with a special prefix as follows: VA2 to VC2, VA3-VC3, VA7-VC7, VE1-VD1, VE2-VD2, VE3-VD3, VE4-VD4, VE5-VD5, VE6-VD6, VE7-VD7, VE8-VD8, VE9-VD9, VO1-VO7, VO2-VO8, VY1-VY7 and VY2-VY8.

D6, COMOROS (and possibly FR/G, GLORIOSO ISLAND). Michel, FR5HG, who has been active in Comoros for the last 2 and a half months signing D68SE,

states he will be leaving within the next. He also states there is a good possibility that he will be in Glorioso next May. If you need D6 on 40 meters CW, check between 0230 and 0300z (his sunrise) on 7010 kHz plus or minus QRM. QSL via F6FNU.

FR/T, JUAN DE NOVA. Thierry, FR5DT/J, was heard this week on SSB operating on 14122 kHz between 1730 and 1815z. There is an indication that he is not an experienced operator, so expect some difficulty in working him. Maybe someone can ask him to move up the band so stateside stations can work him. QSL via: Trans, BP 386, 97410 Ile de La Reunion, Via France

PJ9, NETHERLANDS ANTILLES. Noah, K2NG, and Tom, K2TW, will be active once again in the ARRL SSB Contest from Bonaire. Their call this year will be PJ9G (QSL as usual via WA2NHA).

QSL INFO UPDATE FOR V31EV, V31TP and V31RC. According to Alan, NS0B, the recent V3 operation by NS0B (V31EV), WC0W (V31TP), and WG9L(V31RC), it is not necessary to send QSLs for any contacts made with these stations unless the card is needed quickly for some reason. All QSOs will be confirmed via the bureau. If perchance a card is needed quickly, QSL to the above-mentioned home calls.

SPECIAL EVENT STATION. The city of Melbourne, Victoria (Australia) will host the first race of the 1996 Formula 1 Grand Prix season. In celebration, the Eastern and Mountain District Radio Club has been granted approval to operate an Amateur Radio Special Event Station with the call sign VI3GP (Victor India 3 Grand Prix). The station will be operational from various club members' homes commencing 0000z on Thursday, 7th March to 2359z on Sunday, 10th March. The following frequencies (+/- QRM) will be used at appropriate times: SSB - 3650, 7050, 14180 and 21250 kHz, CW - 3515, 7015, 14015 and 21015 kHz and FM - 146.550 MHz (when time permits the "DX WINDOW - 3799 kHz"). QSL to VK3ER either via the Bureau or direct (with sufficient IRCs or green stamps for postage) to the callbook address (P. O. Box 87, MITCHAM, Victoria 3121). If insufficient postage is enclosed, cards will be returned via the bureau.

T94EU QSLS. Stephan, N2MAU, QSL Manager for Boris, T94EU, one of the most active individual stations from Bosnia Herzegovina, reports as of February 21, 1996, he has answered all direct QSL requests for QSO up until November 19, 1995. He has not received any logs for QSOs that were made since then. Stephan states he has about 100 cards outstanding for contacts made between December, 1995, and January, 1996. PLEASE BE PATIENT and DO NOT SEND DUPLICATE CARDS. Also, please note that his Bronx, NY address is no longer valid, and the correct address is in the 1996 CB.

TJ, CAMEROON. The DX News Sheet (DXNS) report Francois, TJ1AG, is active daily between 2000-2300z on the African DX net on 7065 kHz. QSL via F5RUQ.

TT, CHAD. DL7FT should be active now as TT8FT, but QSNs have been reported. The DXNS report he will be there until March 9th and will be active on CW/SSB all bands, including 160m. QSL to home call. Meanwhile, TT8BP continues to be active. Reports show activity on the 14247 DX net

around 2100z. Also, check 3800 kHz starting around 0445z. QSL via IK5JAN.

VK9X, CHRISTMAS ISLAND. You still may have a chance to work this one if you missed VK9XY. DXNL reports that Ken, JA1CMD/AD4WF, will be active as VK9XH from March 23-25th. He will be operating on CW and SSB with activity on 10-160 meters. QSL via homecall or AE4EZ.

VQ9, CHAGOS ISLAND (UPDATE). Ron, AA5DX, is currently active on Diego Garcia and is operating as VQ9DX. He states that he has a new mail address and will answer all QSLs after his return from VQ9-land. QSL VQ9DX via Ron Marra, Marginal 301C, La Rambla Suite 205, Ponce, PR 00731. Check for Ron on 3507 kHz around 1500z and 7007 kHz around 1400z.
Also, look for Mike, KB7HO, who will be signing VQ9HO and be active maninly on 20 meters SSB in the SPLIT MODE. His planned air time will be from 1300 to 1500z, transmitting on 14140 kHz and receiving bewteen 14180 and 14190 kHz. Mike also plans to be active from the VQ9 club station using the call VQ9IO. QSL to the W7 bureau or direct to KB7HO.

WEBSITES FOR INTERESTED DXERS/CONTESTERS.....
The following WEB sites report details on the upcoming CY0AA Sable Island DXpedition (VHF/HF) in June 1996:
http://www.cam.org/~dino/sable.html
http://www.accessone.com:80/~vbook/1996/feb/cy0aa.htm

THE 59(9) DX REPORT is pleased to announce its new web page is now available to DXers, Contesters and all interested. They have assembled a sampling of the bulletin's features and relevant information.
You can visit the site at: http://members.aol.com/the599rpt/dx.htm

XU, CAMBODIA. Mike, VS6WV, should be here as of February 23rd and will stay until March 15th. He plans to spend the next few weeks on 80 and 40 meters. Here is the schedule he plans to use:
1130-1200z 7007-7012 QSX up 2-3 kHz (looking for east coast)
1200-1300z 3507 QSX up (looking for midwest/east coast)
1300-1330z 14192+/- SSB
1330- whenever 3507 QSX up (usa & europe)
2230- his sunrise 3507 QSX up (looking for east coast)
Mike would like to remind everybody that this is not a DXpedition and that he expects to be operational over the next year or two.

XZ, MYANMAR. The planned operation of XZ1R by OH1MA, OH1RY, OH2BE, OH2BH and OH2KNB has been cancelled. There were no other details given.

ZD7 & ZD8, ST. HELENA AND ASCENSION ISLAND. Andy, G4ZVJ, will sign ZD7VJ from the island of St. Helena, March 29th to April 12th. Activity will be CW only on 1827, 3503, 7003, 10107, 14027, 18077, 21027, 24897, 28027 kHz (+/- QRM) listening up. From April 16-23rd, he may also be active as ZD8VJ. QSL via G4ZVJ's NEW ADDRESS! Andy Chadwick, 5 Thorpe Chase, Ripon, North Yorkshire, HG4 1UA, England.

ZF, CAYMAN ISLANDS. Operators Floyd/M5MUG, Troy/W5AU and Brian/N5OCD will be operating from Little Cayman this week as ZF2FT, ZF2AU and ZF2LB, respectively. They will also be a Multi Op/Single entry in the ARRL DX

SSB Contest signing ZF2FT. Activity will be on 160-10 meters. QSL via WN5YTR.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Bob, for you and anyone else interested, FISTS is a society dedicated to promoting and preserving the fine art of CW in ham radio.

Annual membership dues are $15, and dues or inquiries may be sent to:

Ms. Nancy Kott, WZ8C
PO Box 47
Hadley, MI 48440-0047.

I just joined, and am awaiting my FISTS number.

Someone coordinated a UHF repeater for Ragbri use a couple of years ago. Denny (state repeater coordinator) set aside a freq that was not in use in the entire state, and didn't have repeaters close to IA on any border. I think it was 444.575, but I don't remember it nor the control op.
I think it was a newly-bought Moto Radius Gm-300 repeater, so someone thought the project was worth $2000+ - although I doubt those boxes work real well for weak-handie-talkie reception.

Im curious, how much activity would you expect to hear on the open ocean much less be able to get back to on a handy talkie.

Take your HF rig and go maritime mobile, you'll make more contacts. (He said grinning.)

It seems to me if people would treat the trouble makers on the news groups like you do on the repeaters and ignore them there would be alot less hostility. I know when people stand the chance of seeing the person they're talking to again they tend to be a little more pollite and overlook discrepancies. I guess people figure since they're on the internet the person on the recieving end does'nt deserve any respect. Keep that in mind when your posting or rebutting.

: them, or they all fell apart a few years back and now there are very few
: left for sale. :-)

I can't help with the other stuff you wanted. However, I have both an FT-101E and an FT-101EE. They both work quite well, and the EE is close to 25 years old and still running on the original final tubes.

I doubt if they have fallen apart - and have no idea why there are so few for sale. The only ones I have seen, the asking price was in excess of $500.

I just passed Element 2 and 3A and should be getting my Technician license in a few weeks. I'm interested in learning code and wanted to know if anyone had suggestions for practice tapes. I have several computer programs, but they seem better for practicing after you learn code.

Stephen

I tent to agree with everything you said. I would like to add the idea of making CW an endorsement on
your Amateur license, similar to the endorsements on a commercial license. If you hold the endorsement, you would be able to operate in the exclusive CW parts of the bands.

I tend to agreee. What about keeping the code as an endorsement to the amateur license, similar to
the way commercial licenses have various endorsements. The endorsement would intitle the holder to
use the exclusive CW portion of each band.

In both our countries, in order to gain access to operation on the amateur bands, one must pass an examination in order to gain access to the amateur allocations below 30 MHz. Therefore, there is a very good reason to have Morse code testing -- with it, under the current certification schemes currently in place by both administration in your country, and mine, and most others, is that it provides legitimate access to those frequencies. Otherwise those who wish to operate on those frequencies would be opening themselves to prosecution. My preference is the legal way.

I've heard that argument far to many times. Why not require a EE degree or that
the applicant do 100 pushups. That sure would restrict the membership to the
"club". No, I think that the answer is much simpler. Since the holder of the HF
class license had to pass that code requirement, so should you. This attitute is
is perpetuated year after year even to the point where it origional purpose, to
insure competent operators in a time that CW was the main form of communication,
has benn forgotten. It is going to take some real leadership on the part of the ARRL
to bring amateur radio kicking and screaming into the 21 century. But it is
"catch 22", all of our leadership consist of those people who have passed the code test
and feal that "since I had to pass that test so should you."

Following up on my own post, I found the reference (right under my nose). In the Feb 96 QST there's an article called "DSP-An Intuitive Approach". It addresses noise masking, and even provides a couple of further references.

"An Introduction to Hearing" by D. M Green pub Lawrence Erlbaum Associates, Inc. 1976

and

"Masking: Experimental and Theoretical Aspects of Simultaneous, Forward, Backward, and Central Masking" by J.J. Zwislocki in _The Handbook of Perception_ Vol IV, Academic, New York, 1978.

I hope that's a bit more useful.

2905. [Questions] 1.2 Ghz

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-26 00:00:00 UTC
From: Buster <lathrop@azstarnet.com>
Message-ID: <3131FB72.6303@azstarnet.com>
Source record: 230052

I'm looking to get into 1.2 Ghz. (Terrestrial & then maybe satelite._

Currenly having a blast with 2 meter ssb.

Probably going to get 70cm ssb as soon as I can find
a decent used rig.

What would be my best attack plan to get on 1.2 Ghz.

I have a limited budget.

I was thinking the best way for me to go would be
a transverter for a 70cm all mode radio. That way
I could do both repeaters and ssb. If I can't have
both, I'll forget repeaters.

What kind of antennas (besides good ones:-) work best?
Yagi, loop yagi, quagi, parabola, corner reflector?

How much power is enough? 20 Watts seems plenty?

What kind of RF exposure problems might I expect at
1.2 Ghz? I have a balcony with a 2m 7 element beam
on it now (130 watts). The farthest I could get the antenna would
be 20 feet. I know I don't want to look down the antenna:-)

What is 1.2 Ghz like? I've heard it has very little traffic.

I think I asked all the pertinent questions.

Please respond via E-MAIL also.

Thank You

Buster - KC7KMJ
Tucson, Arizona

Seems to me another nasty thing would be to poing your fox transmitter yagi from a block or so away at anything that rotates, like a bank sign, restaurant sign, etc. It would be like the rotating baffle in a microwave oven - reflecting the signal everywhere every couple seconds.

I suppose you COULD also point it a rotating radar dish near an airport to scatter your signal, but you'd probably also wind up eating jail food for beaming a 100W VHF signal at an FAA radar.

: make that flagpole sturdy and high, and if some antenna(s) fits under the
: flag, well .... put the flag up first, and add the antenna later. There
: is no restriction whatsoever on flagpoles :))

First off....planning commisions have no problems telling the
difference between a flagpole and an antenna tower. And they'll
quickly amend any ordinance concerning such structures to
eliminate such a loophole. (You can always use the flagpole
as a vertical...but that doesn't account for 99% of amateur
tower needs!)

You mention that "Any ham in his senses would not apply for an
antenna mast if not 100% assured that this would pose no problems."
Well...that just doesn't match up with my experiences in the real
world. First, we've had several cases where the application for
a tower got tripped up someone on the planning commision with
an agenda, or neighbors living 3 blocks away getting wind of
a permit application. The current process can be scuttled
hundreds of different ways, and you can get blind sided...backed
into a corner..and maybe even spend $40,000 in court costs
after all is said and done!

Now...onto Douglas

: >
: > Doug Nelson K4JGW

Well, I would guess you aren't alone, but you certainly are a small
small minority of the ham populace from my experience. Now...let me
address the reasons the current NPRM has the items it includes, and
this is paraphrasing a talk I heard Chris Imlay give at Pacificon
this year.

First, the league was loath to ask for a minimum acceptable height, because you KNOW that someone is going to wnhant to put up an 80 foot system in a rural area, and the local zoning board is absolutely going to go after the minimum height they can.... But, considering that some planning boards have decided that 17 feet was the minimum, others 35...(oh..and I'm not exagerating about the 17 feet either!) some miminum number seems to be needed since this is often one of the biggest issues when the current PRB-1 is considered. There is no guidance in it at all as to what FCC will consider adequate...so local communities get to decide. In this area, FCC hasn't gotten the mileage out of PRB-1 that they wanted. That being the case, the league chose 70 feet as a number that could be justified by engineering reasons. Further, most of us in urban areas will find 70 feet MORE than adequate...covering the largest percentage of our population.

Another important request in this NPRM is the league asking FCC to re-state PRB-1's disclaimer for CC&R's to say that FCC does have an interest in seeing that CC&R's don't preclude amateur communications. Right now we've lost at least one court case locally because of the absolute disclaimer. If it were merely reworded...this court case could have gone the other way!

Lastly, there is a request that a new statement be made that any impediments, especially financial, that local communities might place in the process are a violation of the the FCC's preemption. As an example, there are several counties in Ca where it can cost $1500 to apply for a permit...and that is non-refundable, and not guaranteed to get you the permit! They'll take your money, wait 4 weeks, then say no! This isn't fair, and that is what the league is trying to get FCC to speak up about.

Hope this clarifies some of the issues.

Steve KA6S

: : time when all Internet users may someday also need a license.
:
ah, what a wonderful world that might be ... but seriously, the reason
that radio amateurs are licensed has a lot to do with the limited amount
of bandwidth available, and also, more importantly, the idea that ham
radio is preparation for EMERGENCY SERVICE. the gvt. wants to be
relatively sure that in the event of an emergency, the ham community does
in fact know something about radio. that's the idea anyway.

I have been loking for a mobile way to get my e-mail and buying a cell phone and cell modem is too expensive. Someone told me that I could use a HAM radio and that there are ways to get e-mail over it. Can someone please explain how it works, what I need, how much it will cost, and some other little questions. I have _no_ ham experience so please be specific (I am not stupid, just have no HAM experience). Thanx.

Source record: 230064

Hello all. I read in February 96 QST that Ten-Tec has released a 2 meter transceiver kit (p. 129). I was wondering if anyone has gotten their hands on one yet or if they've seen reviews of it. I miss the kit building days of Heath. The Ramsey 2 meter kit I built a few years back gave me nothing but trouble.

This new kit is fully synthesized, covers the whole 2 meter band, has 15 memories and tone encode. If it has a decent receiver in it, I just may buy one and throw it together.

Please comment if you see a review or own one.

Hello, and thanks for reading:
The University of Cincinnati Amateur Radio Club will participate in the 1996 ARRL DX contest. This contest will begin at 7 pm on Friday, March 1 and end at 7 pm on Sunday, March 3. You do not have to have any particular license class or have a license at all to participate!!

The club station is at 901 Swift Hall. There will be someone from the club there all 48 hours of the contest...so come operate any time!!

If you plan on spending most or all of the weekend with us, we ask that you bring a little food to share and/or some $$$ to defray food costs.

If you have any questions, please email w8yx@uc.edu or phone us at 556-9899.

We look forward to your help in making this a successful contest.

-73- de the U.C. Amateur Radio Club

The key words to search on here are "Stochastic Resonance". Very interesting subject matter. I think the article I saw appeared a couple of years ago. The principle is sort of counter intuitive, but it looks like it really does work. Apparently the engineering tests reveal an improvement in signal to noise ratio. Don't know to what extent circumstances play a role in the effectiveness of the technique.

I recall the graphic in the article. Recollection is pretty fuzzy, but it showed two wells, positioned side by side with a vertical "barrier", or threshold between them. On the right side was small signal, sort of perched on top of a large amount of noise. On the left side the well was empty. The claim was (by analogy) that by injecting noise into the well on the right, one could boost the signal over the barrier into the other well where the noise level was low. The article was more convincing than my explanation.

Of course the analogy only works if you position the signal on top of the noise. I think we are probably more accustomed to thinking of the signal as being "buried" by noise.

It would be interesting to see a feature like this added to the next generation rigs. From a marketing standpoint, I wonder how well a "noise boost" switch would be received by the amateur community? hi hi.

Hi - I was on 17 meter CW today at around1610 UTC and worked a pile up
that was really cooking, and I missed the guy's callsign.
He wasn't giving any ID very often and there was QSB so I missed part of
it when he did give it!

It was something like FS/N something. I missed all of his call after the
N.

This is obvioulsy someone on vacation or a DXpedition to
French St. Martin.

Now I don't need this country for DXCC or anything, so rest assured I am
not trying to cheat on any awards, I'd just like to know who I worked!

Can anyone help?
Please reply here or via e-mail to

This is much too logical, and ignores the REAL reason why "YE OLDE FAHRTZ" insist on keeping an 1800's technology as a required amateur testing element in 1996. The CW test keeps the "undesirables" out of "their" private social club on HF, dontcha know?

>email me as I cannot keep up with this group.

(Your e-mail address bounces, so I am forced to use this route)

I can't give you the precise history right now, but it should be easy
to look up.

SOS is a prosign (procedural sign) that combines three dots, three
dashes, and three more dots, all run together with no inter-character
spacing. Thus, it is *not* made up using the letters S-O-S at all.

It is more properly drawn with a bar over the letters (SOS),
indicating they run together. Why was "...---..." chosen? Probably
because it has an unmistakable rhythm, easily recognized by a trained
ear.

SOS does not stand for "save our ship." It is not an abbreviation or
acronym. It is just a rhythmic string of Morse dashes and dots.

SOS was created during the early days of wireless telegraphy for use
by ships in distress. Its first recorded emergency use was on April
14, 1912, when it was sent by the radio operator aboard the Titanic.

2927. Re: Mounting detachable faceplate in car - Help!

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-26 00:00:00 UTC
From: dougrand@i-2000.com
Message-ID: <4gquf8$3g2@i-2000.com>
Source record: 230124

Hello Simon,

My solution was to buy an extra ash tray from the dealer (I don't smoke.) The ashtray was some sort of plastic material which I was able to cut with my moto-drill and cut out the exact size of the faceplate from the radio (Alinco DR600). It looks as if it came with the automobile and when I am through with either the auto or the radio, I'll just install the new ashtray I purchased while the car was new and no one will ever know. I used a trunk lip mount for the antenna.

Doug, KN2Y

simont@post.its.mcw.edu (Simon Twigger) scribed:

xxHi there,

xxI have recently bought a Kenwood TS742 2m/70cm dualbander which has a
xxdetachable face plate to allow the radio to be installed in the trunk
xxand the contols to be up front within reach. I have the radio installed
xxunder the passenger seat and the wires from the battery are in place
xxwithout any problems. I am now trying to find a way to mount the
xxfaceplate, preferably without doing anything permanent to the car.

xxI was wondering if anyone can give me any tips on how this might be
xxaccomplished? If I have to drill some holes somewhere inconspicuous
xxthen so be it, but Im trying to avoid it if I can. I have a Honda Civic
xx'94.

xxI have seen pictures of faceplates mounted on mobile phone 'goose
xxnecks' (flexible arms mounted to the car floor) which look very neat
xxand tidy. Has anyone used this method and how easy is the installation
xxof the goose neck?

xxThanks for anyone who can help me here.

xx Simon, AA9PW

From: kovar@zeus.ia.net
Message-ID: <4gr9sa$qhc@hera.ia.net>
Source record: 230127

I would value your unbiased thoughts on what you all feel to be
the best dualbander mobile and hand held unit in current production?
It would not hurt to throw in a few comparisons to past radios as I could
be talked into a oldie but goodie mobile.

My local feedback has pushed me into purchasing FT-51r's for handhelds
for wife and I. At this point I have no negative comments to share on
operation of these units. I smile everytime I use it as if Yeasu realy
got this one right. Even down to the extra audio output.
If anyone else has software for the ft-51r please email me with comments.
It would be handy to know of other options you all find helpful too.

Thanks for you interest in helping,
Jack and Jana

>> a lonely, pathetic wretch

Oh, come now. The same could be said of stamp collectors, gardeners, or weight lifters. All of these can be solitary pursuits. I would counterargue that the true ham is someone who extends his personal interest in radio into one or more of the areas of education, public service, and/or technical experimentation, enhancing the appeal of technical careers to the young and enhancing the value of radio technologies to those who rely on others to make those technologies useful. And many hams do most of their hamming in the company of friends, family, or perfect strangers whose notion of "a ham" is "one of those nice people with the radios who help us out with _______."

The existence of lonely, pathetic hams in a sample that does not meet scientific selection criteria says more about the person who chose the sample than it says about the population of hams.

>>> For the most part they just sit on their butts.

My gosh, you're right. It's just been brought to my attention that
at least 50 per cent of all hams make less than average contributions
to the missions of the amateur service. What a sorry state of affairs.

Past experience suggests that it would be a mistake to think that the
irony intended above is too obvious to bother pointing it out explicitly.
My point is that mediocre contributions by the majority of any group
are the norm, and not a reason to reduce the opportunities for the
exceptional contributions made by the few.

Yaesu may be able to provide you the information you seek. Call them in California. I have seen the Yaesu 101 series for sale several times on the local packet system and at some hamfests. Amateur Radio Trader, a bi-monthly swap mag, has a separate Yaesu section. I disagree with 500 and up price.. I have seen the EE and EX models go for as little as 250-300 dollars. I had a 101EX that unfortunately got dropped by UPS on it's way to being aligned. It was a great radio, did close to 300 watts out, and had a good receiver. Part of the problem with this series is thAt some of the 101 series radios had 11 meter capability and others could be modified real easy. Therefore, some of the used stuff is not up to ham specs.
If you can find one, buy it.. they really are one of the better radios from the 1960's and 1970's

==========

I just don't let it get into the receiver. I now use a well shielded rig (ICOM 751 / Ameritron AL1200), and 100% shielded coax (9913) to an antenna switch box located outside near the antennas. I once used ladder line with an antenna tuner in the shack (all within 5 feet of the computer), and had problems.

You may be letting it into the rig with a poorly shielded antenna tuner, or ladder line, etc.

Measure the interference strength first, then disconnect your antenna and cover the connector on the rig with aluminum foil. If this knocks the interference way down, just look for ways it is leaking into your rig's antenna line. If this doesn't knock it down, your receiver might not be very well shielded.

> Does anyone know of commercially available 1.2 GHz repeaters, or
> commercially available components (receivers, transmitters, duplexers)?

ICOM makes a 1.2GHz repeater, about $2500. It's 10 watts out. I don't remember the exact model number, but AES sells them. I have set one up, but due the the lack of good commercially available antenna, I have had mixed results.

I also used a Down East Microwave 70 watt PA (if I remember correctly, about $350) with it. If you use this combo, you will need a good quality 3db 15W attenuator since the output of the Icom is not adjustable (can be set only to 1W or 10W) and the PA has a 6W input power limit.

WACOM in Waco, Texas makes a nice 4 cavity duplexer with over 100db isolation TX to RX on a 12Mhz split (about $750). Overall size is small, the entire duplexer mounts on a 5.25 inch high 19" rack panel.

Try whistling - it works on most UK repeaters (which also require a 1750 Hz
tone).

I saw our club's 101E BLOWN apart a few years ago - it was borrowed,
then returned minus the mains power lead. Somebody then put a mains
plug on the DC power cable and plugged it into 230V AC.

Can you guess what happened next? GM4AXG was QRT for several months!

My question is - what's happened to all the 2m FM rigs ever sold? They
don't seem to be QRV (at least not where I live in West London) and yet
the market for new black boxes and ex-business radios for conversion to
2m FM is bigger than ever. Where are all these radios going? Who's using
them, and what for?

Hi Paul,

some people recommend whistling. Well, sometimes it seems to work.
Another possibility is to buy an external microphone for your HT
which is equipped with an extra button and the 1750 Hz tone generator.
These micros are advertised in several ham magazines. There are
also several repeaters which are simply carrier-controlled, but
most require indeed the 1750 tone burst.

From: Scott Armstrong <SARMSTRO@VAXA.STEVENS-TECH.EDU>
Message-ID: <4gveed$2ro@apocalypse.dmi.stevens-tech.edu>
Source record: 229895

I have a question on purchasing a replacement battery for my Icom W2A transciever. The battery that came with the radio is 7.2 V and 1000 mAh. However, the replacement batteries that I have found are 1200 or 1400 mAh (the Icom replacement, 1000 mAh, at $100 is a little too pricey). Can anyone please let me know which would be the most suitable choice for a battery? Also, can anyone let me know if they've had any positive or negative experiences with regards to different battery manufacturers (ie Periphex, Battery-Tech, etc...)?

Any responses can be either posted here or sent via E-mail.

Thanks in advance...

The Comet base station/repeater antennas for this band are horrible. Our
coverage is very spotty even line-of-sight! I understand that Austin
Antennas (in Maine, I think) have a good reputation.

I find it quite refreshing each time I learn of others that enjoy
working QRP. I have a fairly modest station consisting of an Icom
IC-701 with a 40-meter dipole in the attic of my apartment. I may not
be able to work Australia at the flip of a switch, but I always get a
contact when I call CQ.

>Don't let a few "bug" you when the majority welcomes you.

Agreed. I don't read the rec.radio.* news groups often because I'd
much rather enjoy a curteous conversation on HF than read the
bickering that goes on here.

The local server recently changed its DNS number. Some people have
complained they can't access my pages any more.

You should be able to find them under:

http://www.innotts.co.uk/~asperges/

but if not, instead try:

http://194.176.128.13/~asperges/

and it should work. This is the new DNS address.

The pages contain info of interest to Radio Amateurs, Radio
enthusiasts and Short Wave listeners.

* There are links to many other pages, newsgroups, ftp etc;
* A mock exam;
* Questions and Answers for newcomers;
* IRC links
* Links to Friends on the Net (mostly homepages involved in radio)
* The new Short Wave Listener pages with links to Broadcasters on the
Net.
* The Russian link;
* Sources for help;

There will be new updates in March.

NORTHWEST STORMS

As flood waters receded in the Pacific Northwest, ham radio
operators continued their efforts to provide relief workers with
emergency communications.

For the third time in as many months, the pacific northwest has been hit by the forces of nature, and amateur radio was there to help. After high winds in December and ice storms in January, early February saw a period of relentless rain that caused many rivers in northwest Oregon and southwest Washington to swell past flood stage. Even as the President was making his rounds of the stricken area, hams were active in their ARES and races support roles.
We spoke with Lew Williams, WB7NML, who is the ARES Section Emergency Coordinator, who told us that numerous county ARES and RACES Programs were involved.

"There were probably 19, no 21 counties that were activated, and there were, I don't know, 4 or 5 others that were on standby." Williams

The extreme flooding posed many problems for both amateurs and rescue personnel alike. Lew described some of the difficulties for us.

"There were situations that were where hams were helping out with four wheelers. They had to, you know the people with four wheel drives that were helping on evacuations, etc. Wasco County, they lost all their roads. The streams wiped out a bunch of the roads and they had to evacuate the nursing home with snow cats, would you believe." Williams

Hams linked rescue workers in the field to local eoc's, as well as linking the eoc's's together, and to the state emergency operations center as well. This was not always easy, as many of the facilities had their own problems.

"The main generator failed and they brought in another one and it almost went down so they were almost, in that particular incidence were almost relying on the hams because of their portability." Williams

Hams involved in the emergency knew how to adapt when things didn't go well. Generators weren't the only equipment to fail. Some of the radios didn't fare so well either...

"The HF radio in the particular EOC'S wouldn't operate and so they were operating portable out with the VHF out to someone with HF to maintain contact with the Oregon Emergency Management Division." Williams

Even with the difficult conditions and equipment failures, Lew says that northwest amateur radio operators came through when needed. Lew says that the lessons learned by the hundreds of amateurs involved in the disaster will be evaluated just as if this had been a training exercise, and the information will be put to use refining the state's emergency communications program to further improve the hams service to the public.

It's been an exceptionally wet winter in the Pacific Northwest. More storms are being predicted and hams could be kept busy until

spring.

MOTOROLA to IARN: RETURN OUR GEAR

The International Amateur Radio Network has been asked to return a 150 MHz Motorola repeater, a dozen handheld radios and a power generator loaned to the Red Cross by the IARN in the aftermath of Hurricane Marilyn. The W5YI Report says that Motorola wants the equipment back so that it can be replaced in the company's emergency inventory for future use.

(*****
ELECTRONIC RENEWAL

The FCC will not renew your license electronically. So says the ARRL's Regulatory Information Branch in response to several recent queries. The League says that you can now download the Form 610 from the FCC fax-on-demand service or from the FCC's home page on the World Wide Web.
The FCC now only renews a ham radio license if an application is received within 90 days before or two years after the expiration date. It will not be renewed if submitted earlier. And, if you apply for renewal after your license has expired, you may not operate until the application has been processed.
As announced last year, there is really no good reason for a person not to renew his or her license prior to expiration. Since last fall, the FCC has been sending out a mail in reminder called Form 610-R. You should receive it at least 90 days before your ticket expires. If all of the information is correct, you just need to sign the form and return it. If for some reason you do not get a Form 610-R, a regular Form 610 is okay to use.

(*****
DAYTON CB'ER SPEAKS OUT

A Dayton, Ohio area Citizens Radio operator who was jailed for causing TVI says that his neighbors never really complained about TVI before calling in the local police. Is this a case of an over zealous police department or is it justice gone sour? Amateur News Weekly sorts out the details in this half time report:

"On December 9th, 1995 a Morrain, Ohio CB operator, Steve Hollbrook was arrested for causing interference to his upstairs neighbors. He was charged with interfering with a public service, a third degree felony with no bond and was held in jail until Monday, December 11th when the Montgomery County Prosecutor declined to press charges. On Wednesday, February 7th, 1996 Steve Hollbrook appeared in Kettering, Ohio Municipal Court where the case was transferred, due to a conflict of interest of a personal nature with officials in the Morrain City government. The charges of interfering with a public service were dropped, apparently because these matters were beyond the city of

Morrains jurisdiction. However, part of the original complaint had to do with what Mr. Hollbrook said over his radio in reference to his neighbors. On the basis of those words, which the neighbors taped from their TV, the Morrain City Prosecutor decided with the legal action. Officials offered Mr. Hollbrook the opportunity to plead to a reduced charge, a minor misdemeanor. After consulting with legal counsel, Mr. Hollbrook pleaded guilty and was fined $100 plus court costs, with $50 of the fine suspended.
Steve's reason for pleading guilty was to get this matter over with. So he could move on and examine his options toward the future. He is currently consulting with his attorney and declines to be more specific as to what his options may be.
One of the things Steve remembers the most is his approximately 48 hours behind bars for this incident. To this day, he is still not entirely sure why things went as far as they did.

"You know, like I said the whole weekend, sitting there. I kept asking myself, Why am I here? And you know my wife kept telling me you are in the right, just be patient. You know it is hard to be patient when you are sitting there behind these bars." Hollbrook

There are many twists and turns behind the scenes in this story. According to Steve, when he originally installed his CB, his wife checked with all the neighbors in the building to see if anyone was experiencing interference. When that proved to be the case, some antenna work was done, additional filtering was installed and offers were made to supply filters to the neighbors if the problem reoccurred. That offer was never taken up by anyone. Because until the day of his arrest, Steve claims that at no time did anyone in his building ever complain to him about interference. His neighbors comments that interference had been going on for two months to the police leave him totally baffled to why they never spoke to him or his wife about the problem.
The case has been settled to the satisfaction of the City of Morrain. Whether everything has been settled to the satisfaction of Steve Hollbrook remains to be seen. Steve is greatly appreciative to the local amateur community and to the American Radio Relay League for informational assistance and moral support during the case.

As an aside, Steve Hollbrook told Charlie Kotterman that he really enjoys electronic communications. And as a result of the support shown him by the Dayton ham community, he is already at work studying to get his own amateur radio license.

(*****
N6NHG ARRAIGNMENT AGAIN DELAYED

The arraignment of alleged computer hacker Kevin David Mitnick, N6NHG has again been delayed. Several Los Angeles news outlets reported on February 20th that Mitnicks' arraignment will likely occur at the end of March. This, according to Assistant U.S. Attorney Christopher Painter will indicates that this will give lawyers more

time to try to reach a plea agreement.
Mitnick became a federal fugitive in 1992 when he violated the terms of his probation by leaving Southern California. He was arrested last February in North Carolina, after federal investigators tracked him to a rented apartment near Raleigh.
U.S. District Judge Mariana Pfaelzer is presiding over Mitnick's Los Angeles case and will probably preside over his North Carolina case as well. Under federal guidelines, if Mitnick pleads guilty to the North Carolina charges in Los Angeles, he may be sentenced by a local judge. If he pleads not guilty, he will be sent to North Carolina for trial.

HAM RADIO FOILS THEFT ATTEMPT

And two Kansas hams are heros after stopping another kind of computer crime. Zachary Canright, KB0GMC, and Beryl Masters, WB0EJJ, recently helped police in Overland Park, Kansas, nab three teenagers trying to make a getaway with $7,500 worth of computers allegedly stolen from a local store. Canright's attention was first drawn by the teens' peculiar behavior as they loaded the computer equipment onto a truck. He then noticed the vehicle had no plates and used his mobile radio and a local repeater to contact Masters. Masters directed police to a shopping center lot where Canright had followed the youths and witnessed them attaching plates to the pickup. Police arrested the three teens and charged them with felony theft.

(*****
BOSNIA RADIO

Hams have assisted the Army test a Bosnia-bound mobile AM radio station. Fred Cresce, KC4MOP, Steve Ickes, WB3HUZ, Ken Moffat, N3EAR, and Paul Courson, WA3VJB, staffed a new mobile Army Broadcast Service station at Fort Meade while it operated on 1670 kHz and identified as ABS Radio.
Regular listeners to Newsline probably recognize the name Paul Courson from reports he has done for us. In real life, Paul is a broadcaster with Dow Jones. He tells Newsline that the station took to the air on February 5th and operated around the clock for several days. He says that he and the other hams were brought in to help specifically because of their interest and experience in using AM on the amateur bands.
The 5000 watt ABS transmitter went on the air using a 150 foot high vertical antenna the hams helped set up and tune. The station broadcast from Fort Meade until February 9th. It was then packed up for transport to Bosnia. There it will be set up to entertain and inform US troops stationed with the peace keeping force.

(*****
NEWSLINE JOINS TAPR AUDIO WEBSITE

Tucson Amateur Packet Radio has added Newsline to its audio site on the world wide web. According to Greg Jones, WD5IVD, all bulletins on

the system are encoded using Real Audio type technology. Greg says that he plans on keeping the weekly announcements on the system for sometime.
The Universal Resource Locator for the TAPR web site is a long and complex one so we won't try to give it here. To get it, drop a note to Greg via the internet to:

gjones@tenet.edi

(*****
TWIAR BACK

And a belated welcome back to the satellite to our friends in Albany, New York who produce "This Week in Amateur Radio". The program returned to satellite distribution on Saturday, January 27th.
This Week in Amateur Radio is carried by the "Tech Talk Network" on Telesat Canada Anik E2 communications satellite. The network will utilizes transponder 18 with 5.8 MHZ wideband analog audio. Anik E2 is located at 107.3 degrees west longitude in equatorial geosynchronous orbit and provides excellent coverage of North America with spot beams aimed at Alaska and Hawaii.

(*****
KITSAT HOT

In ham radio space related news, AMSAT North America reports that Kitsat-Oscar 23's transmitter efficiency went down during January because its orbit configuration offered no eclipse period and no time to cool down. The additional heating resulted in a degradation of efficiency.
KO-23 is a packet store-and-forward satellite. The spacecraft is a cooperative effort between Korea and the University of Surrey in the United Kingdom.

(*****
DECLASSIFIED LAUNCH

The February 1996 issue of Popular Mechanics includes a feature article by Philip Chien, KC4YER on the now declassified Corona spacecraft project. In his story, Chien notes that the very first OSCAR satellite was a piggyback payload on the Discoverer 36 mission, which was actually the cover name for the Corona series of spy satellites!
The article includes a fairly good artist's rendition of what the Agena upper stage looked like in space. From what Phil understands, the OSCAR payload was attached to the launch vehicle in place of where ballast would have normally been.

(*****
VATICAN BEACON

From the international desk comes word that a new 6 meter beacon is on the air from Vatican City. On Sunday, 4th February a new beacon

was activated from the location of HV3SJ. Its operating frequency is 50.004 MHZ, shifting 800 Hz upward depending on temperature at the site. The power output is 10 watts to 5 element Tonna beam aimed towards the United Kingdom. An omni will be installed as soon as weather allows. This beacon should be of particular interest as no beacon has been active from Italy on 6 meters until now.

(*****
DX

In DX, 9J2BO is quite active from Zambia on all bands. Look for hi, on 3.505 MHZ at 04:15 UTC and 10.103 MHZ at 05:20 UTC. QSL to:

Brian Otter
P.O. Box 34554
Lusaka, Zambia

Effective immediately, requests for any of the 4U1UN cards or any of their special callsigns such as 4U50UN should be sent to WB8LFO. The use of the W8CZN mail drop has been discontinued.

And T30DP is currently on Kanton Central Kiribati. Reports indicate that he will be active as T30DP/T31 on 20 meters only. QSL via VK4CRR.

(*****
NEW CALL - OLD CALL

And finally, this from Dick Flanagan, W6OLD who reports the story of Dick Creley, KB7UUK, a ham who wanted a new call sign. Not wanting to wait for the FCC's Vanity program to arrive, Creley started working his way through the General and Advanced requirements in order to qualify for one of those nice 2 by 2 Advanced callsigns.
Well, we are glad to report that he made it! The former KB7UUK now has his new call. Want to guess what it is? Try KJ7UK.
Makes you kind of wonder if the FCC's computer isn't programmed with a strange sense of humor.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

Internationl Communications treaties still require the Morse code for
any one wanting to operate in the HF bands 160-10 meters. There are
plenty of U.S hams that have petitioned the FCC to drop the code requirement
but the FCC has rejected all such proposals. Things have changed though
at least there is no code requirement for the VHF and higher bands.
I started as a No Code Tech but quickly upgraded so I could operate on the HF bands.

Rick Horwitz, AB7FH

>>
>
>To me, that series of statements makes no sense.
>

Why? With due respect, the orginal posulated there were no good reasons for CW Tests in 1996. In summation, I said that unless those tests are administered, amateurs in your country and mine, and most other countries, the only way that one could operate on the HF frequencies would be illegally. You have seem to understood the essence with the following paragraph.

>Yes, people who transmit on any frequencies should be "legal". That
>means that they should be licensed, thus meeting the requirements of
>the particular license. No argument there ... and no relevance to the
>morse code debate either.
>

I am glad that we agree, as I think most others would also.

>There is no TECHNICAL reason why "code" skills should be required for
>a license to use HF. One can easily and effectively argue that the
>"morse" requirement is completely obsoleted by contemporary
>technology, continues to exist due to arbitrary decisions, and

>obviously is not an effective barrier to keeping ill-behaved people
>off of HF.
>

Ahhhhh... But the original posting only addressed the justification for the testing in 1996. Since the rules and regulations require the knowledge of Morse code, the relevancy of having that knowledge is superfluous to this question. Since that was not addressed, ergo, testing is still justified until such time as the regulations are changed.

If the question was "Convincing Arguements for the Knowledge of Morse code in order to have access to the HF amateur allocations", my response would be different.

I hope that I have been successful in explaining the difference.

>I still believe that the "pro-code" arguments condense to two wishes:
> a. "I had to learn it so you ought to ..."
> b. temporarily deterring competition in use of the HF bands
>

I would venture another reason. Those who cherish Morse code for amateur communciations realize that if Morse code testing is completely abolished, fewer newly minted amateurs will bother to take the time and effort to learn the code. As a result, their membership will shrink to proportions to such an extent that they will become known as "a special interest group", an anathema to those who take a conservative view of life (not a criticism of those who espouse conservative ideals, just an observation, thank you).

>I passed the "code" simply because it was a license requirement,
>though I've no interest in it whatever.
>

There is no doubt that your reasons for learning Morse code, and your lack of interest thereof after passing the examinations is shared by the majority of the amateur community.

>73,
>Tony KC7HDT
>(who has taken and passed the "code" test, and retains no desire
>whatever to use "cw")

>>
>>I am going to be the fox in a foxhunt here in Lexington, KY March the 3rd,

We allow the fox to "wander" in a defined radius so it looks "normal", or like the fox is supposed to be there rather than rigid in space. Normally, we give a 100 meter radius of wander.

Sneakiest I remember was putting the fox in a perambulator (baby buggy) with a DDDR ring antenna in the bottom and a doll baby covered up so it looked real. Sent "mommy" and "daddy" to the zoo with all those great iron fences and cages.

Are YOU gonna go up to some 6'5" guy and ask if he's got a transmitter under his kid?

As the new Technical Editor of 73 Amateur Radio Today I am trying to bring some of the writing seen in 73 to more of a grass roots level. I feel that it is important to cover construction projects and product reviews of equipment that can be used and afforded by the majority of the amateur community as well as the big, neat, expensive stuff. I am looking for hams that would like to write about projects they have completed or equipment that they have had experience with. The main criteria being, is it something your fellow ham would be interested in.

If you think this might be fun and would like more information please email or call me.

!?!?!?

2968. Can someone give me the dates of the Dayton Hamvention?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-27 00:00:00 UTC
From: djmd@one.net
Message-ID: <4gtsaf$lhl@news.one.net>
Source record: 230073

See subject.

Thanks!!

2969. Looking for VE Testing SOON...

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-27 00:00:00 UTC
From: davidf@gobears.Berkeley.EDU
Message-ID: <4gu25h$4o5@ecuador.it.earthlink.net>
Source record: 230074

I'm trying to find a VE Testing opportunity to upgrade from my Novice to Tech ASAP in the Southern California area. Anything in LA County, Orange County or Riverside County will do... For that matter, if anyone knows of any tests on a weekend in San Mateo/Santa Clara/San Francisco/Alameda Counties, I can do that too.

Thanks,

Dave Friedman

When surfing the net, I found this URL:
http://www.guernsey.net/~amateur_radio/
which leads to Steven's pages.
Via http://www.guernsey.net/ one finds other pages on
amateur radio.
BTW, my own amateur radio page is
http://www.agnld.uni-potsdam.de/~martin/Funk.html
(in German, and probably our computer will be down until
next week ;-( ).

2972. Where to find SuperMorse?

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-27 00:00:00 UTC
From: ebcjoon@ebc.ericsson.se
Message-ID: <4gumom$5pc@erinews.ericsson.se>
Source record: 230077

Do I need to say any more?
I had it before but by a mistake i deleted it from my
harddisk. Do any one know a ftp-site where i can find the program?

73 from Johan Eriksson, Stockholm, Sweden.

>It isn't really the characters S O S, but
>one character consisting of 3 dots, 3dashs, 3dots with no space between
>them. This is only my opinion....

Gene,

It is not only your opinion, but the fact as far as I am informed.
SOS was oficially introduced shortly before the Titanic desaster,
to replace the CQD as a distress call, because the latter is not
unambigous enough.

Just search for super morse, I know it's there I just searched for it.
Hope this helps.

Actually, 97.405 waives the Part 97 rules, including 97.5, in case of a
real emergency posing an imminent threat to life or property. Thus the
FCC would seem to be saying that operator licensing isn't primarily
concerned with emergency communications. This is in accord with common
law. For example, in ordinary times, the state reserves the right to
kill to only its licensed agents, IE police and military, but in an
emergency where there is an immediate threat to life, an ordinary citizen
is permitted to exercise deadly force. Thus it would seem that any
purpose of licensing would be confined only to non-emergency situations.

The idea of spectrum rationing does appear to be a defacto result of
the current licensing system, but CCA'34 contradicts that as a purpose
because it says the rules have to be crafted to maximize access to the
spectrum by the public consistent with orderly use. I think that's the
real reason for licensing, to attempt to ensure orderly use through
requiring the applicant to demonstrate a knowledge of the consequences
of actions he might take with radio transmitters, IE issues of bandwidth,
harmonic emission, spurs, etc that might cause harm to other users,
particularly life safety service users such as the Coast Guard, police,
fire, etc. In other words, the only real purpose license exams serve is
to remove the excuse "I didn't know" from the vocabulary of a violator.

Gary

2982. Alpha Bravo Charlie Delta: phonetic alphabets (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-27 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4gvprq$8s0@lyra.csx.cam.ac.uk>
Source record: 230087
Cross-posted to: sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
February 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Chinese and Esperanto.

This posting supersedes the one of 8th January. A notable
addition this time: Aleph Boaz (Hebrew).

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest. In the case of Web servers I ask that there be no
reformatting and suggest the use of the XMP directive.

* Following recent discussions this article is not now
* posted to alt.usage.english.

You may find a copy of this article and some other material
on the World Wide Web at:

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet is approved by the International Civil Aviation Organization, the FAA and the International Telecommunication Union; note that different bodies prefer different spellings, so one also sees: Alfa Juliett Juliette Oskar Viktor.
Dates from about 1956.
See also http://aviation.jsc.nasa.gov/alphabet.html, which includes information about pronunciations]

[UK police use Indigo(?) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book has: Beta Ultra Volvo Whisky X-ray]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories.
An "analogy alphabet" in a Kenyan directory has 'Charlie' and no Y. A Swiss directory has: Andrew Charlie Lussy Queenie Sugar. French/German vocabulary books: Andrew Charlie Lucy Mike Nelly Sugar Xmas]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich]

Telephone alphabet used in India:

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water Xray Yellow Zero

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[See also http://aviation.jsc.nasa.gov/old-alphabet.html.
In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. Dam Busters film: A apple, G George, J Johnny,
L leather, M mother, N nuts, P popsy, Z zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

>am not stupid, just have no HAM experience). Thanx.

Part 97.113(5) prohibits using amateur radio in lieu of communications
that can be reasonably supplied by other radio services. Thus using
amateur radio *solely* to avoid paying cellular charges is illegal. And
of course any messages in which the operator has a pecuniary interest
are forbidden, so any messages would have to be social and not business
related.

In other words, it's Ok to experiment with messaging systems, and
even to pick up internet mail via amateur radio, as long as the intent
is not to avoid cellular charges, but is instead a result of a desire
to experiment and learn about wireless messaging systems, and as long
as the messages so picked up are not of pecuniary interest.

Now with those legal restrictions in mind, if you still think amateur
radio is of interest, the first thing you'll need is a license. Depending
on the mobile range you'll be covering, you'll need either a Technician
or General license, depending on whether VHF or HF will be needed to maintain
contact with the message server from which you'll be retrieving messages.
Most likely you'll only need the Technician license. This is a relatively
simple license to obtain, you have only to pass a test on regulations and
rudimentary radio theory. The test costs about $6. Radio Shack carries a
study guide that can be used to prepare for the exam.

Assuming you pass the licensing exam, you'll need a radio, of course.
A mobile rig will cost between $100 and $700 depending on whether you
buy new or used equipment, and on how elaborate that equipment is (you
can actually scrounge a suitable radio for as little as $50 if you don't
mind getting your hands dirty with a bit of conversion work). You'll also
need a mobile antenna. That can cost up to $100, but you can make your own
for pennies.

Finally you'll need a TNC (Terminal Node Controller) which acts as
radio modem and PAD (Packet Assembler Disassembler), and a display
device. The display device can be as simple as a dumb terminal or a
PDA, though a laptop is probably a better choice. A used TNC can be
had for about $65, or a new one is only about $120. The laptop cost

can be written off to other purposes since it need not be permanently dedicated only to servicing the TNC.

A typical setup (all new equipment) would be about $300 for a modest 2 meter only radio, $120 for a TNC, and maybe $30 for an antenna and other odds and ends. Adding in the exam fee, you're looking at a startup cost (not including laptop) of about $456. Another way to look at that is as 2280 minutes of cellular time. Doesn't look very cost effective as a way of just avoiding cellphone charges does it? And this is a very bare bones system, offering half-duplex 1200 baud operation (which will typically have *much* less throughput than a 1200 baud telco modem, IE it will be *painfully* slow).

You can do much better, of course. 56 kb RF modems are available, and they *fly*, but the problem then becomes finding someone on the other end of the connection, IE your server gateway, who has similar equipment. Most amateur packet is still at 1200 baud, and most amateurs haven't yet moved up to the higher available speeds that would be comparable to, or faster than, what is available over a cellular phone link. So you'll probably be stuck with low speed systems *on the other end* regardless of how much you are willing to update *your* system.

If you want to learn and experiment, amateur radio is great, but if you're just looking to save on cellular charges, it is not for you.

>>++++++++++++++++++++++++++++++++++
>>Sid George, CPA sid@hal-pc.org
>
>They already do it's the tech plus, general, advanced and extra portions of
>the band.

Well, first of all, there currently *aren't* any CW exclusive portions
of amateur bands at HF. The only CW exclusive spectrum is at VHF, where
a Morse test isn't required for access anyway. However, the various classes
you name above, which do grant increasing HF spectrum privileges based
primarily on Morse speed testing, grant increasing access primarily to
spectrum used for non-Morse operation, IE most of the gains are in what
is commonly called voice spectrum. So those classes don't meet the
requirements Sid proposed.

I would suggest, however, that Sid's proposal is flawed anyway by the
fact that requiring a Morse test for access to Morse exclusive spectrum
would be redundant, IE if you don't know Code, you can't do Code,
so to use the supposed Morse only spectrum, you'd need to learn Code
anyway, making the test requirement superfluous.

2985. Re: ARLB013 Question pool committee

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-27 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Feb27.161728.7372@ke4zv.atl.ga.us>
Source record: 230090

In article <4gqas7$k8r@news.hal-pc.org> sid@hal-pc.org writes:
>Would someone explain to me what this is all about?

Simple really. The other VEC organizations formed an umbrella organization to handle matters of mutual interest, such as the question pools. The ARRL refused to join. The umbrella organization then refused to seat the ARRL representative. The ARRL is now going crying to Uncle to make them let the ARRL participate without having to join the VEC umbrella organization.

There's some backroom politics involved of course. Since the ARRL is the 500 pound gorilla, it has been dominating VEC matters by sheer intimidation up until now. The other VECs banded together to try to gain more of a say in the system. The ARRL obviously doesn't like this, and is appealing to the government to eliminate this threat to its domination.

(There are some veiled accusations that one of the other VEC's motives may not be completely pure either since whoever controls the question pools has an advantage in publishing study guides.)

Since the regulations under which the VECs operate don't formally recognize any umbrella organizations, this ploy by the ARRL will almost certainly succeed, and its power to dominate amateur licensing matters (and its ability to profit from test study materials) will be maintained.

Wether you consider that a good thing or not depends on your point of view. I think it shows one of the hazards of one party rule. Amateur radio in the US is somewhat like Mexican politics, where one Party has maintained power so long, and through such underhanded tactics, that it is little more than a dictatorship. I think amateur radio would benefit from several strong voices rather than just one, but the ARRL has moved aggressively to squelch any competition to its monopoly position for decades, and so we remain a one party state.

ARRL loyalists would maintain that there is room for political differences inside the party, but realistically he who currently controls the printing presses has an incredible advantage over any potential contender. Like the Red Chinese communist party, change really only comes when the Old Guard dies and a new Guard moves up to assume the levers of power and repeat the process.

2986. Learning code with a computer (Was: Best Code Learning Tapes?)

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-27 00:00:00 UTC
From: skubi@angela.inria.fr
Message-ID: <4gv8d7$r5g@news-rocq.inria.fr>
Source record: 230091

In article <lui-2302962355260001@arrington.dscnet.com>, lui@netcom.com (Stephen Lui) writes:
> I have several computer programs, but they seem better for
> practicing after you learn code.

I disagree, except if your programs are especially crappy. Everything you need is a possibility to choose you character set, the character speed and the overall speed. For example, you can start with learning e i s h 5, individual characters sent at 14 WPM, overall speed 3 WPM, then increase overall speed up to 6 WPM (you do not change the character speed).

Then, you learn this way t a u v 4.

Then, you mix these things and get a charset containing e i s h 5 t a u v 4.

And so on.

Programs are much better than tapes, because you are free to chose your speed and charset. Also, a program I wrote allows you to vary the relative probabilities of characters. This is a very useful feature, which a tape cannot give you. I introduced this feature because I had huge problems learning b and d, so I increased their frequencies so as to learn them fast.

Another use for this feature is as follows. You have already learned 20 characters, and are learning l f y q AS. You operate as follows:

- Learn l f y q AS

- Then, use a charset where f y q AS have a high probability, and the characters you have previously learned are also present, with a significantly lower probability. This way, you continue learning the new stuff, and you also learn not to confuse it with old stuff. For example, correctly copying AS while l might be present is a different and harder task than copying AS while you know that l is absent.

>

To me, that series of statements makes no sense.

Yes, people who transmit on any frequencies should be "legal". That
means that they should be licensed, thus meeting the requirements of
the particular license. No argument there ... and no relevance to the
morse code debate either.

There is no TECHNICAL reason why "code" skills should be required for
a license to use HF. One can easily and effectively argue that the
"morse" requirement is completely obsoleted by contemporary
technology, continues to exist due to arbitrary decisions, and
obviously is not an effective barrier to keeping ill-behaved people
off of HF.

I still believe that the "pro-code" arguments condense to two wishes:
a. "I had to learn it so you ought to ..."
b. temporarily deterring competition in use of the HF bands

I passed the "code" simply because it was a license requirement,
though I've no interest in it whatever.

73,
Tony KC7HDT

(who has taken and passed the "code" test, and retains no desire
whatever to use "cw")

2988. [Q] Frequency of Jupitor emissions

Hi All:

Anyone know what frequence emissions from Jupitor may
be picked up on. Also, is there equipment that can
be bought or built cheaply to do such. As I recall I thought
I saw mentioned in a trade rag 18Mhz - 22Mhz...

Thanks,

Gary-

Hi there. The Decameter radio bursts do not stay on a particular frequency. They are quite broad banded and move in frequency as time goes on. 22 Mhz is a good place to look, but it also has some broadcast stations on when the ionosphere is refractive to those freqencies. It is best heard on a broad band AM shortwave receiver with a directional antenna (like a Yagi or a loop) pointed at Jupiter. The emissions are very irregular, and seem to be most often observed when the moon IO is in certain positions around the planet.

> 50MHz Meeting in Holland:
> Hello 50 MHz addicts!during the weekend of 13/14 July this year a
> Six Metre Meeting will be held in Utrecht, the Netherlands. This
> meeting will be organized simultaneously with the VERON department
> Centrum. On Sunday the meeting will be accompanied by a flea market
> and during the whole weekend the department Centrum will be active
> in the CQ-WW VHF contest. Activity is planned on both 50and 144 MHz
> and a special callsign PA6SIX hopefully will be issued and used
> during the 50 MHz activities.
> The main purpose will be to organize a social event. Plans are being
> made to organize a barbeque on Saturday evening. In order to have an
> idea who will attend the meeting, preliminary subscriptions are
> desired which can be mailed to: pa3fym@pi8wno.nld.eu or (Email)
> besten@chem.ruu.nl
> Facilities to place your tent are available. People who like to
> spend nights in a camper, please inform us.
> Contact::Peter PA3CNX (flea market and VERON Dept. Centrum liaison)
> or Remco PA3FYM (50 MHz liaison).

> More News on the ES Openings:
> Further to the report earlier Re XRAY Flux levels:
> Since the big USA openings (and including the openings) in December
> it was decided to take a look at several factors relating to the
> Sun:
> Openings have occured many times during Dec/Jan/Feb, most of these
> have been preceeded by a rise in the measured Geos 7/8 XRAY Flux
> levels.
> These levels seem to rise dramatically...however rises in solar
> activity and Geomagnetic field activity do not always indicate this.
> So far 99% of the openings this year have coincided with XRAY flux
> level increases.
> This may not be the full explanation but certainly seems to indicate
> that this may well be part of the equation for one form of Sporadic
> "E".
> Today at around 4am there were intense bursts of XRAY levels...the

> SFI was 74, the "A" index was 4, and the "K" rose slightly to 3.
> Solar activity was very low, Geomagnetic field was quiet, but the
> XRAY flux peaked to 10-7 as pictured below: 50MHz then opened in
> Europe some several hours later (noticed on all openings):
> December/Janaury/February's openings have been printed out for
> future comparisons: Tks to Noaa for info:
> [Image]

what i got out of it was that the VECs aren't all in agreement
about forming a corporation. and the arrl is the 800 pound gorilla
here. i would think it might be risky to not have the arrl on board
on something like this.

anyway, the claim is that the folks in the corp aren't working with
the folks not in the corp and that the "outsiders" have input that isn't
being considered...and the FCC expects the various VECs to work together
on question pool maintenance.

1) borrow a police car and put the hidden transmitter in the trunk, attached to the antenna that normally runs the radio. hunters have to pick up a tag from under the windshield wiper.

extra credit: have a uniform busting someone every time a car with a T-hunt antenna comes near

2) put the hidden transmitter into a briefcase and have a guy in a cheap suit and sunglasses carrying the briefcase sit on a bus going around the city for hours. hunters have to board the bus and ask the spooky-looking dude for their tag.

extra credit: handcuff the briefcase to the dude

3) hide it in a storm drain hanging from a cable; hunters have to pull it up and retrieve the tag.

extra credit: park a fire engine or other large truck in front of the drain

4) hide it in a bush and when the first hunter arrives and goes crashing off into the brush to find it, go pick it up and move it under his car behind a tire where it can't be seen easily.

extra credit: put it under the hood instead

I'm not making this up you know, every one of these was done here in San Diego.

Use your imagination.

Interesting, does this mean that because people can talk without knowing
how to read and we therefore do not need to teach the alpahbet? CW is the
most basic form of communication possible, and to eliminate it is to
promote a fundamental illiteracy. The digital modes should be enjoyed
and developed, but someone who is not willing to develope even a basic
facility for the most basic mode available doesn't belong there.

Scott,

Simply put, the bigger battery will give you more tlalk time. I agree that $100 is just too much
for a battery pack. The manufacturers are getting too greedy when it comes to accessories and
their prices. I've used CADNICA cells for years and have had good results. I used them as
replacements for OEM packs because, I too have had it with high battery pack prices. I use thesee
cells and get them from E.H. Yost, aka Mr. NiCad. Another good brand of NiCad is Gates, albeit
they're a bit pricy. Lastly, you may look into Nickle Metal Hydride cells. They have double the
capacity fore the same physical size, but cost more and have a higher opencircuit discharge rate,
however.

Good luck

>be bought or built cheaply to do such. As I recall I thought
>I saw mentioned in a trade rag 18Mhz - 22Mhz...

Jupiter emissions are very broad band. They are generally
stronger at lower frequencies. The problem is that the
lower frequencies get reflected by our ionosphere. The
range of 18-22 MHz is a good compromise between emission
strength and ability to penetrate the ionosphere. Last
summer there were good articles on this subject in many
radio magazines because of the comet collision. I remember
QST, Monitoring Times and the NASWA Journal carried
articles. You need a directional antenna that can be
steered in both azimuth and elevation to get the best
results. The higher the gain, the better.

>head configuration. Any help is appreciated.

There's a hitch mount for the 10 meter whip that you can use. It doesn't require any *obvious* holes. You do have to drill a hole to pass the coax out, but that can be hidden by the rear bumper. Of course you need to have a trailer hitch on the vehicle to do this. You need an antenna you can hinge over, however, or you can't open the hatch. Hustler and Comet have suitable masts. It you use a hitch extension bar, you can use something like a Hamstick, but you have to bend it pretty sharply to let the hatch rise. (Obviously, you can just throw a magmount on the roof for VHF/UHF, but a 10 meter whip needs to be too long for that to be practical.)

As to mounting the radio, there aren't many good options unless you have a remote head setup (then you can mount the radio body in the cavity at the right rear of the vehicle). About the best you can do is to mount the radio against the passenger side of the center console. With a fairly slender radio, that doesn't interfere with the passenger very much, and you can still see and reach the controls easily.

With a remote head, your options expand tremendously. If you have a remote setup that doesn't have the mike cord attached to it, you can put the head on the overhead console and bring the mike cable up from under the seat. That works nice, a friend of mine has his rig installed in his Cherokee that way. Or, if you were going with a VHF/UHF rig, the Standard 5718 with all the controls and the display in the mike makes things real easy.

You could also use one of the cellular phone stalks to mount the head up from the floor (you can bend the stalk mount legs to conform to the right side of the transmission hump and come up right beside the console, I did that on my Comanche.) Unfortunately, these stalks aren't strong enough to hold an entire radio. If you try that, it'll shake like the devil when you drive.

I made a sheetmetal clamp that fits over the lip of the instrument cluster of my Cherokee which lets me mount my IC-706 head directly in front of me (offset a bit to the right so I don't have to reach through the steering wheel to tune it) for a heads up display. I really like that.

I had two real winners many years ago that should get some kind of award. I'll tell you about one. Two of us hauled a 6-meter AM Gonset Communicator and a car battery in a kids wagon to the top of a hill near the Los Angeles County Fairgrounds. That should tell you how long ago it was. A couple of miles to the west was an airport that was called Bracket Field. Maybe still is.

A few days before the fox hunt, I recorded several minutes of a helicopter flying around the air field. I knew that there would be helicopter rides during the fair. You can see what's coming can't you?

I could watch the traffic below using binoculars and could tell when a hunter was in the area. As soon as they got close, and making sure the helicopter was down by the air field, I would play the tape in the background. In those days, we talked continuously. You could see the mad scramble to turn around and head for the helicopter. Being several hundred feet up kept the signal wierd enough to screw up the signal strength. No one had direction finders in those days, and relied on S-meters and how loud the signal was. I kept this up for about 2 hours until one of my buddies finally figured it out. He was the only one to find me that night.

I will tell you about the other one some other time.

Dick Hughes - W7LVA

>The ARRL is one (of many) VEC.
>
>The ARRL and other VEC's, because they declined to join this
>"umbrella" organization, were denied (by that organization)
>the right to participate in maintaining the question pool.

They weren't denied the right to join the organization, they
declined to join. It would seem to me that the ARRL had
the opportunity to participate, but the *ARRL* was the one
who refused to do so.

>Loyalist or not, it has nothing to do with "500 pound gorillas".

I'd say it has everything to do with 500 pound gorillas.
The ARRL wanted things on *their* terms, or they were
going to pick up their marbles and go home (and call Uncle
to get their way anyhow).

Now there might be good reasons why the ARRL refused to
participate, but there has been no statement of those
reasons published by the ARRL. The minutes don't say a
thing about why the ARRL declined to participate. That
being the case, the ARRL looks the villian in this case
for refusing to cooperate.

Just because the ARRL is adhering to the letter of the
regulations doesn't make their position look good. The
ARRL already has an image problem in some quarters, and
this move doesn't help it one bit. The ARRL has a history
of wanting things its own way, and not joining with any
other group unless the joint venture is really just a
captive creature of the ARRL. The breakaway of the Canadians
and the recent turnabout by the coordinators over the SPOC
issue are results of reaction to such perceptions about
captive creatures of the ARRL.

The ARRL needs to make the case *why* it refused to participate
clear, otherwise this just looks like another example of the
500 pound gorilla throwing its weight around.

There is a new repeater directory out. It has listing sorted in many ways.
There is information on my clubs homepage.
http://www.indirect.com/www/ara.

My club is selling the southwestern version which covers 5 states. Check
it out.

Why don't you buy the ARRL handbook for $8.00. You can get one
at any HAM radio Store

>the opportunity to participate, but the *ARRL* was the one
>who refused to do so.

This is semantics. The rules don't say that there shall be an umbrella organization, just that all of the VECs must cooperate. If the other VECs exclude the ARRL, then there's no cooperation.

>Now there might be good reasons why the ARRL refused to
>participate, but there has been no statement of those
>reasons published by the ARRL. The minutes don't say a
>thing about why the ARRL declined to participate. That
>being the case, the ARRL looks the villian in this case
>for refusing to cooperate.

I agree that the ARRL needs to explaint heir refusal to join the umbrella organization - but that doesn't mean they should be excluded from a process that the rules mandate they be included in.

>and the recent turnabout by the coordinators over the SPOC
>issue are results of reaction to such perceptions about
>captive creatures of the ARRL.

You've been hearing only one side of the SPOC story - the one spread by SERA, in an effort ot make themselves look good.

The truth is that the SPOC hasn't chaned in focus or implementation one iota from what was decided in St. Louis from today. It is SERA that has done the about-face, after realizing that they looked petualt and silly over their previous stand.

-->
-->Dick Kiefer, K0DK

Dick,

CT is not a logging program for maintaining a logbook. It is a contest logging program only. I dont think it is what you want.

Look at the major commercial applications such as LogWindows. It has all the features one needs for logging including rig control, rotor control, callsign database interfaces, and is the only one I know of with online support (through Compuserve).
All major awards are tracked and it also has built in packet support and specific features for PacketCluster (tm). You can be alerted when a spot comes in for a country/band/mode etc... that you need by voice alert of the callsign and frequency. Auto QSY when you click on a spot and auto READ of messages when you click on one in the list after doing a "dir".

It is also the only one I know of with a dedicated internet reflector where features are suggested and discussed. The author participates in that reflector also.

You won't find that kind of support for any other logging program.

LogWindows Reflector Info:

Submissions: logwindows@ve7tcp.ampr.org
Administrative requests: logwindows-REQUEST@ve7tcp.ampr.org
Questions: k7fl@ve7tcp.ampr.org

I have no financial interest in LogWindows.

Good sneaky stuff!

Some years ago, N9DLW and I studied the rules carefully and then hid
in the observatory deck of Sears Tower in Chicago, right in the heart
of "intermod alley". To circumvent the rule that said that you couldn't
hide in a place where admission was charged, we not only made arrangments
for anyone with a talkie to be admitted free, we had the guards actively
wave over anyone carrying radio equipment and encourage them to go up
and visit the observatory.

Not only did the hunters have to overcome the intermodulation and the
interference, they had to put up with the signal reflecting off just
about every tall building in Chicago, and had to learn to think in
three dimensions. We were not well-liked after that one. :-)

> packet and that was _it_.

When I go there, I work my buddies back in the
Bay Area on 75 meters no problem. The packet
burst might have been from the weather telemetry
system down there. The CHP used to beacon on
154.905 MHz. :-)

> Does anyone know of a repeater that covers Death Valley and the
> Panamint?

With a decent mobile rig, the 146.640 (or was it 6.94?)
above Bishop works okay. There are some spots where you
will drop out, but some positive surprises as well.

Best place to get advice on things like this is the GCARS
net at lunchtime on 7.2685 MHz. There's always somebody
out there who can answer such a question in most copious
detail.

Cheers -- Mark

May 17/18/19 I believe. It moved this year (normally it
is at the end of April). Goal is to improve the weather!

Too bad many foreign hams will miss either the CA DX convention
or the hamvention now...the new dayton date no longer allows
for a combined trip! Oh well...

By the way, anyone reading this have a hotel reservation in
Dayton that is not being used???? Travel agent here says
all hotels booked...HELP! Thanks, Joe

In my Cherokee, I use on-the-glass antennas. The radio bolts to the
panel below the dashboard, to the right of the steering wheel, in front
of the driver's right knee. My tribander fits fine there and the
display is quite visible.

>You run 9600 baud over HF? Wow. I'm impressed. You must be the EE of all >EEs.

It doesn't take an EE to run 9600 bps on HF -- just somebody with a wideband transmitter and a willingness to break the rules. :-)

(Actually, things might get interesting if hams are able to start using advanced digital modulation modes in the next few years. Zenith's 8-VSB system can transmit 19.3 Mbps in a 6 MHz TV channel with room to spare, and there's a project going on to transmit compressed digital audio -- using 96-128 kbps of data -- in the AM broadcast band *under* regular AM broadcasts, so a station can run AM and digital stereo on the same frequency through the same rig!)

3033. Re: ARLB013 Question pool committee

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-29 00:00:00 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <4h3c5grkj1@mhadf.production.compuserve.com>
Source record: 230004

The situation boils down to this.

1) All VEC's, by FCC rules, must cooperate in maintaining one question pool. The FCC has clearly stated to NCVEC that it does not recognize (in fact denies) their right to exclude any VEC from the QPC.

2) The "umbrella organization" formed by some VEC's told all the remaining VEC's "You join our club, or you are denied participation in maintaining the question pool".

3) Some VECs, including ARRL declined to "join the club", and the "club" therefore terminated their participation in the QPC. Clearly this is in flagrant conflict with 97.523.

Excuse me, but WHO is saying "play by our rules, or leave the game"? Sorry, Gary, but you got it dead backwards!

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 897 25TH JANUARY [sic] 1996

[Don't worry - they soon stop shouting]

WELL, THIS IS THE CENTRAL COAST FIELD DAY WEEKEND SO THE CAST IS GOING OUT ON SATURDAY MORNING AND AGAIN ON SUNDAY NIGHT.

I HOPE YOU WILL FIND THE TIME TO COME AND VISIT THE ANARTS STAND AT WYONG -- IF IT IS A HOT DAY, JUST REMEMBER THAT THE GRANDSTAND FLOORS ARE AIR-CONDITIONED ... THERE IS ALWAYS A GOOD CROWD AT THE FIELD DAY, AND PLENTY TO LOOK AT AND PERHAPS TO BUY. SEE YOU THERE.

IN THIS MONTHS DIGITAL JOURNAL, RICH, N6GG, COMMENTS ON THE PROBLEMS OF RTTY OPERATION ON 40M -- (QUOTE) THERE IS NO UNIVERSALLY APPROVED SPACE ALLOTTED FOR RTTY (QUOTE) --.
HE GOES ON TO STATE THAT -- 40M SEEMS TO BE THE MOST RELIABLE, CONSISTENT BAND AND HAS THE BEST PROPAGATION DURING THE EVENINGS --. RICH HAS SOME IDEAS TO CONSIDER TO SAVE 40M.
THESE ARE REPRODUCED BELOW.

1. START UP BEGINNERS NETS TO HELP MASTER THE VARIOUS DIGITAL MODES.

2. SHORT 4-HOUR 40M SPRINT CONTESTS LIKE THE POPULAR TARA RTTY SPRINT.

3. ATTEMPT OTHER NARROW BAND DIGITAL MODES FOR CONTESTING ON 40M, SUCH AS ASCII OR FEC (NOT PACKET!). ASCII AND FEC MODES USE HIGHER BAUD RATES THAN RTTY AND SHOULD BE VERY INTERESTING. HOW ABOUT 75 OR 100 BAUD RTTY?

4. MORE COMPARISONS NEEDED ON HOW STATIC CRASHES EFFECT DATA THRUPUT ON VARIOUS DIGITAL MODES.

THINK ABOUT THIS: IF WE CAN INSTIGATE A SIGNIFICANT INCREASE IN USE OF 40M DIGITAL FREQUENCIES - SAY FROM 7060-90 KHZ - IT WOULD SHOW A GENUINE NEED FOR INCREASING DIGITAL FREQUENCY ALLOCATIONS ON 40M - THE REAL BREAD AND BUTTER BAND FOR FUTURE OPERATING DURING EVENING TIME. WE COULD END UP ACTUALLY HAVING A HOME ON 40M!

AN INTERESTING LOT OF SUGGESTIONS FROM RICH, N6GG.

ED.: I HAVE SHORTENED THE ARTICLE TO FIT IN THE BROADCAST, BY REMOVING TOPIC EXPANSION, ETC. IT IS PART OF THE COLUMN - CONTESTING AND SPECIAL EVENTS - IN THE FEBRUARY 1996 ISSUE OF THE DIGITAL JOURNAL, PUBLISHED BY THE INTERNATIONAL DIGITAL RADIO ASSOCIATION, PO BOX 2550, GOLDENROD FL 32733-2550.

1515-14081 YL2DX
1603-14089 9H4B

Notes of Interest:

ST. MARTIN, FS. Starting from 12 February Paul, WX9E will be active from FS5PL's QTH, using the FS/WX9E call except for the ARRL DX CW Contest 17-18 February. The 22 February Mike, N0BSH and Chad, WE9V will meet Paul in St. Martin, and the group will be active on all bands from 10 to 160, WARC included, to March 6. Chad will also try to be active in RTTY as FS/WE9V. QSLs for FS/WX9E, FS/N0BSH and FS/WE9V are via the respective home calls. QSL during contests contacts via WX9E.

IOTA. From 24 to 28 April the IQ8B Team IK8NWK, IK8TEO, IK8TWP, IK8VRH, IW8BVN and IW8EAA will be active from the following islands in the Egadi (EU-054) group: Favignana (24-28 April,IIA TP-011), Marettimo (25 April, TP-010), Levanzo (26 Aprile, TP-009), Scoglio Faraglione (27 April, TP-013), Scoglio del Rais (28 aprile, TP-???). 10 to 80 meters operations,WARC included, in CW, SSB and RTTY.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, an digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL at @ W5KSI.#NOLA.LA.USA.NA.

Gl de (DX2) Luciano, I5FLN AT ZS5S.ZAF.AF

ARLD010 DX news : Excerpts

This week's bulletin was made possible with info provided by Wayne, N7NG, Tedd, KB8NW, Jaakko, OH1MA, and Contest Corral from QST. Thanks to all.

NORTH KOREA, P5. The DPRK project group has been working long and hard to put P51DX on the air and establish amateur radio in the Democratic People's Republic of Korea. Due to transportation scheduling and severe weather conditions, the group's next trip to the DPRK will not be until late April.

The goal of the DPRK project is to establish permanent on the air amateur radio activity with the large base of radio communications enthusiasts that are currently involved in radio direction finding and classroom Morse competitions.

HEARD ISLAND, VK0. Tony, WA4JQS/VP8BZL, founder of the South Sandwich Island Antarctic DX Group, SSIDXG, reports his group scrapping plans for their three week operation. This is to allow the KK6EK/ON6TT Heard Island group maximum opportunities.

MACAO, XX9. Mine, JE1CTM, is in the early stages of planning a short trip and operation from Taipa Island.

FRANZ JOSEF LAND, R1F. Sergey, R1FJZ, is active on 3503 kHz and on 160 meters between 1100 and 1200z. He has worked 170 EU and JA stations on 160 meters but only VE1ZZ and KL7RA in North America3 kHz between 1230 and 1330z and 14243 kHz at 0915z. Sergey will go QRT in August. The Russian government may discontinue funding Arctic bases, so further activity could be rare.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 243. Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NH2G, WA3YVN, KK6EK, N6YRU, KD7H, N7NG, AA8GL, W9KIA, WA0PUJ, Pacific Daily News, DF4RD, DL7IO, VA3AOC, F6AJA, JA3MAS, OH1MA, OH6YF, OH8BQT, ON6QR, G4BUE & DX News Sheet and VK3EW for the following DX information.

9H, MALTA (Gozo and Comino Island). NODXA members and friends Holger/DL7IO, Birgit/DL7IQ, Tom/DL7UTM, Ragnar/DL7URH, Tom/DL2RUM and a few more (not yet confirmed) will be active from May 17-31st. Their activity and location will be on the northwest end of Gozo Island. From there they MAY be active from Comino Island (9H8) to take part in the CQWW WPX CW Contest with an experienced team. They have planned a minimum 2 complete stations and a lot of titanum, aluminum and copper wires. They plan to use a 22 meter high vertical antenna and Holger is preparing log periodic dipole arrays from wires for the low bands. The callsigns for Birgit and Holger are 9H3TZ and 9H3TY, respectively. The other operators' callsigns are not known yet. The contest callsign will be 9H3TY from Gozo or a 9H8 callsign from Comino Island. QSL via DL7VRO.

PJ7, ST. MAARTEN. Ron/ND5S, his wife Sue/KF5LG, Bil/AA8GL, and his wife Dorothy/KB8ZXO will be on the Dutch side of St. Maartin signing PJ7 from the Sapphire Beach Club from February 25th to March 9th. They will be in the ARRL SSB Contest the first weekend in March. They hope to have a special call sign once they get to the island. QSLs to the home calls. Special cards will be printed for the trip.

SPECIAL EVENT STATION. From March 1st until May 31st, look for VG3CRC, the Canadian Red Cross Headquarters special event station celebrating the 100th anniversary of the Red Cross in Canada. Also, look for other provincial Red Cross stations with special callsigns. Special QSL card via bureau or SAE + IRC to callbook address (VA3CRC). (TNX to Ric Guidone)

VP2E, ANGUILLA. VP2ES (KC0ZC - Stew), VP2EZ (WA0PUJ - Glenn), VP2E/N0ZSU (Loring), and VP2E/KL7YL (Vivien) will be active February 28th-March 6th. QSL to home calls. VP2E will be the

call during the ARRL SSB Contest. QSL to KC0ZC.

VQ9, CHAGOS ISLANDS. Ron, AA5DX, will be active from here for
the next 4 months. Ron's call will be VQ9DX or VQ9RM and he
will be concentrating on 160, 80 and 40 meters.

[Yep, folks; another short story - the FIELD DAY, you know :-)]

VK2 WICEN news

WICEN News

Again, WICEN (NSW) is pleased to boast that it has arranged for WICEN to be accessible directly from the Internet, under its own address. Web pages are still being shuffled around, but in the meantime we would like to announce that, as usual, VK2 has taken the lead, and has registered the domain "wicen.org.au". Those other States wishing to partake are invited to contact WICEN (NSW), to have their own State sub-domain delegated to them. Further details, such as e-mail addresses etc, will be given in a later broadcast, but for the time being, the Web-aware can use "http://www.nsw.wicen.org.au/" to access the NSW page, or just "http://www.wicen.org.au/" for the Federal page. As the pages are still being reorganised, they may be temporarily inaccessible, or interactive features not working, so please be patient. Full credit for this goes to Mark VK2XGK.

Following from today's Field Day, don't forget that WICEN is still raffling a "Green Slip", generously donated by the NRMA. You don't have to be a WICEN member to partake in this, so if you are wondering how you are going to pay for your vehicle insurance this year, just contact your friendly local WICEN co-ordinator, who will be only too pleased to sell you a ticket or ten. It is expected that the raffle will be drawn in May; there will also be orders on a leading electronics retail firm for second and third prizes.

The annual Bungonia Cave Rescue event is on the weekend of 16-17th March, and is being co-ordinated by Dave VK2KFU; Dave requires around sixteen to twenty people, as this event promises to be the biggest yet, with ten teams in the field. Those who think they can demonstrate their communications skills, under somewhat difficult circumstances, are invited to contact him; don't worry -- you will not be required to go underground, although the possibility exists for those so inclined. Dave would prefer it if numbers could be finalised by next Friday, at least, for those who wish to eat. For just $40 (half the going rate), you can work hard under difficult circumstances, get woken up at the crack of dawn by Police Rescue 5's obnoxious siren, watch a corny movie, have hot and cold showers (usually in that order), enjoy what best could be described as "filling" food (it's not gourmet cuisine, but you won't go hungry, as long as you aren't vegetarian), and have lots of fun. The potential for publicity here, before various emergency services and the public, should not be overlooked. As befits WICEN's Internet status,

up-to-date information will be available via the Web page,
"http://www.nsw.wicen.org.au/bungonia.html", as and when.

On the same weekend, on 17th March, is the Red Cross Calling Doorknock
Appeal, with David VK2UDT taking enquiries.

Those regions wishing to have their activities publicised on this
broadcast are requested to get the details to the Publicity Officer,
Dave VK2KFU, by Thursday night at the latest. Packet radio is the
preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or
failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator
is: "http://www.nsw.wicen.org.au/".

The Weak Signal Challenge - 1 Year, No Winner

For the last year, I have sponsored a weak signal contest from my web page (http://www.webcom.com/~af9y/). Hundreds have attempted to extract the call of this weak Morse code signal using various signal processing techniques. So far, all have failed. I know it is possible to extract the call letters using a combination of signal processing and the "ears" of a well trained operator.

I am now increasing the prize to $100 for the first correct identification of the calling station. I believe the winner will have to break new ground in signal processing techniques. I've made available a text list of all possible calls to neutralize any recognition advantage that an experienced operator would have.

The challenge is a one minute digitized recording of a weak moonbounce signal. The Morse code signal is just above the noise but is strong enough to allow copy of my call letters (AF9Y) near the middle of the one minute period. The mystery station is sending a simple repeat of his call and my call. The characters "DE" may or may not be between the two calls.

The file is called unkn422.wav and is available from:

http://www.webcom.com/~af9y

Additional information is available in the web page.

> I wonder about others' experience in building speed to 13 WPM. How long can I
> expect if I work 1 hour/day? I can't tell if I'm "on course" !

Well, years ago, I passed my Novice test in June and then passed the General in September -- but I didn't "work" at it. If you've mastered 5 wpm and want to proceed to General
ASAP, get your Novice and get yourself ON THE AIR. No amount of spending X hours a day "working" on your code speed will advance you as much as actually getting on the air and
working CW. When you're working on the air, it is communication, not practice or work. If you
make a practice of working people who push your envelope just a little, you'll advance your code speed to 13 and beyond without your even being aware of it. I've participated in many VE exam sessions, and whether it is 13 or 20 wpm, those who get their practice on the air advance more quickly, copy better and are less likely to be distracted if someone across the room rattles a piece of paper than those who have spent theit time practicing with code tapes or computer generated material.

73 and good luck

To do packet radio you need a computer, a TNC (like a modem) and a radio.
I am not sure exactly what your HP is capable of but my GUESS is that if
you can run a terminal program you can probably do packet.

Does your machine have a hard drive? If not you may be limited to what can
fit on a floppy and I have not experimented with how big packet radio
software is.

2m seems to be popular with packet but I think you can use other bands as
well.

I am sorry I can't be of more help. I haven't done packet myself yet.

Brian.

>against this.
>I've heard that this is enforced in Australia.

There is a law in some states that dont allow you to operate a *HANDHELD*
cell phone while driving. I would imagine other countries have adopted
this law too, but it doesnt apply to "hands free" cell operation.

>How does this apply to us operating mobile rigs while driving. Is the
>stipulation relative to not doing anything which is making it unsafe for
>driving the vehicle?

I have never seen this law apply to anything but cell phone operation. It
does not include two-way, CB, or Ham operation.

>I think of the many public related utilities which use and rely on 2 way
>communication while doing their job. Is their a distinction between cell
>phones and 2 way radio's?

Yes, as said above, the laws that I have seen, only pertain to handheld cell
phone operation. I suppose somewhere it may be different, but I have NEVER
heard of ANY law restricting any other type of communications.

Take care.

> Rick Horwitz, AB7FH

And the FCC will continue to reject these proposals UNTIL the ITU drops the
Morse code requirement for access to the radio spectrum below 30 MHz.

The main reasons things have change, is that the ITU now only requires the
Morse test for access to frequencies below 30 MHZ.

3045. GB2RS News 3rd March 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-29 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <825647402snx@llondel.demon.co.uk>
Source record: 230016
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 3rd of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB is very supportive of the Islands on the Air, or "IOTA", programme, and has been most impressed to observe its growth in recent years. The Society wishes to give full recognition to IOTA and to establish, in due course, a new IOTA Committee as a full committee of the Society. The recent growth of IOTA has been very significant and is undoubtedly placing unreasonable demands on those involved in the administration of the programme. The Society's Headquarters will in future therefore handle all administration. This will free up members of the new IOTA Committee to concentrate on strategic and technical matters.

In order to facilitate this move, it has been decided to disband the existing IOTA committee. This committee is in fact a working group and is a sub-committee of the Society's HF Committee. An IOTA Transition Group under the joint chairmanship of Martin Atherton, G3ZAY, and the Society's General Manager, Peter Kirby, G0TWW, is to manage the transfer of the IOTA administration to the Society's headquarters. Mrs Eva Telenius-Lowe has been appointed HQ IOTA Co-ordinator.

The Society is most grateful to all members of the IOTA Committee for their past support and contribution, especially Roger Balister, G3KMA, whose unstinting hard work and enthusiasm over the past 11 years has largely been responsible for the growth and popularity of the programme worldwide. The Society is delighted that Roger has accepted the position of RSGB IOTA Manager and will continue to manage the programme on a day to day basis alongside the HQ IOTA Co-ordinator and the IOTA Committee.

As a result of the action of the Society the future of the RSGB IOTA programme is now assured, and the Society is confident that the programme will continue to grow in popularity and take its place as one of the leading amateur radio awards in the world. All future correspondence and enquiries regarding IOTA should be directed to RSGB IOTA Programme, PO Box 9, Potters Bar, Herts. The postcode is EN6 3RH.

The RSGB London Amateur Radio and Computer Show will take place at the Lee Valley Leisure Centre at Edmonton in London on the 9th and 10th of March. The event features a very large number of traders, lectures, a bring and buy stand, the RSGB bookstall and membership information stand, RSGB Morse tests on demand and much more. This year for the first time the event also features a Vintage Sound and Vision Fair. The official show guide was published in the March edition of Radio

Communication.

There has been an overwhelming increase in demand for Morse test places over the last few weeks, as a result of candidates wishing to obtain one of the last G-series callsigns before the change to the M-series on the 1st of April. This demand is expected to peak next weekend at the RSGB London Amateur Radio and Computer Show, where there will be ten Morse examiners on duty, with two parallel testing streams in operation. The examiners will attempt to test as many candidates as possible, but anyone wishing to take a Morse test on-demand at this venue is advised to book in at the information desk as early as possible. Two passport size photographs and the appropriate fee are required if you wish to take a Morse test on demand.

Contrary to the rumours currently being put about, particularly on the packet network, RSGB Council wishes to state categorically that neither at the present time, nor at any time in the past, has any consideration whatsoever been given to the idea of disaffiliating all or any Raynet groups. Council believes that the question of affiliation or non-affiliation is a matter to be decided by the groups themselves and will support, to the best of its ability, any and all groups which choose, or have chosen, to do so. Council has not been and is not engaged in any negotiation with R-A-E-N, but can see no reason why we should not co-exist peacefully.

A weekend of amateur radio and Scouting activities will take place at Gilwell Park on the 8th and 9th of June. The camp and amateur radio station will be set up as close as possible to the Greenwich Meridian, which runs through the Gilwell Park site. Participants must bring their own tent and camping equipment, but food will be provided. Places are limited, so contact Geoff Dellbridge, 19 Cleve Close, Astley Cross, Stourport on Seven, Worcestershire as soon as possible if you are interested. His postcode is DY13 0NY.

Another VHF Round Table will be held at the BT Laboratories, Martlesham Heath, near Ipswich in Suffolk on Sunday the 31st of March. The event will include round table sessions and seminars, testing facilities and a bring and buy stand. For BT Labs' security reasons, all access is by advance booking only. For tickets, send a list of the names of all persons attending along with a stamped, self-addressed envelope to Roy Smith, G0RRC, whose address is correct in the RSGB Call Book.

There is a new RSGB QSL Bureau Sub-Manager for Guernsey. He is Mr R A Attwater, GU4WQP, 3 Stanley Villas, Stanley Road, St Peter Port, Guernsey.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which this week was edited at RSGB Headquarters:

From the Cayman Islands, Bob Whelan, G3PJT, will sign ZF1JT from Thursday the 7th until the 12th of March. Activity will be on all bands, CW only, including an entry in the RSGB Commonwealth Contest on the 9th

and 10th. Outside the contest, he will emphasise activity on the low bands.

From Cambodia, VS6WV is active again as XU6WV from now until at least the 15th of March. Check 14192 at 1300 UTC, and 3507 kHz, listening up, from sunset.

And from Myanmar, formerly Burma, the XZ1R operation has been postponed due to regulatory difficulties. Approval for the XZ1N operation scheduled for the 2nd to the 11th of April is still pending, with a decision expected next week.

Next the Rally News:

The Red Rose Rally organised by the West Manchester Radio Club takes place today, the 3rd of March, at the Horwich Leisure Centre, Church Street, Victoria Road, Horwich. The event features many traders, a bring and buy stall and Morse tests on demand. The doors open at 11.00 am, or 10.30 am for disabled visitors, and talk-in is on 2 metres, channel S22. Further details can be found on page 94 of the March edition of RadCom.

The Wythall Radio Club annual rally will take place at Wythall Park, Silver Street, Wythall, near Birmingham, next Sunday, the 10th of March. There will be three halls and a marquee with traders, and a bring and buy stall run by the club. The doors open at 10.30 and talk-in will be on 2 metres channel S22. For further details contact the rally organiser, Chris Pettitt, G0EYO, on 0121 430 7267.

Now for the HF contest news:

The ARRL International DX SSB Contest is taking place this weekend, the 2nd and 3rd of March. The contest finishes at midnight UTC tonight, Sunday. Work USA and Canadian stations only on all bands from 160 to 10 metres - excluding the WARC bands - and send an RS report plus your power. USA and Canadian stations will send a report and their state or province. Brief rules can be found on page 22 of the February RadCom.

Next weekend, the 9th and 10th of March, the RSGB Commonwealth Contest takes place. It starts at 1200 UTC on Saturday, and running for 24 hours. Stations in the UK should work other Commonwealth stations on CW only, in the 80, 40, 20, 15 and 10 metre bands. A full list of Commonwealth call areas and the rules for this contest can be found in the RSGB Contesting Guide in last September's RadCom.

Next some VHF contest news:

The RSGB March 144 and 432 MHz Contest is taking place this weekend, the 2nd and 3rd of March, until 1400 UTC on Sunday afternoon. The rules can be found in the September 95 RadCom.

The final session in the RSGB 70 MHz Cumulative Contests will take place on Sunday the 10th of March between 10 and 1200UTC. The rules for this contest are also in last September's RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS:

The period from the 19th to the 25th of February saw solar activity at very low levels and the geomagnetic field at "quiet to unsettled" levels. The sunspot number increased from 12 on the 19th, to 29 on the 24th and 25th. The mean was 21. Solar flux levels increased slightly from 71 units on the 19th to peak at 76 units on the 24th. Levels then declined to 73 units the following day, and the average was 73. No solar flares were reported.

Electron fluence levels were moderate on the 19th, 23rd and 24th, and at high levels on the 20th to 22nd and on the 25th. X-Ray flux levels remained at the minimum level of A1 until the 24th. They increased slightly to A2 units by the 25th and the average was A1.2 units. The 90-day solar flux average on the 25th was 73 units, the same level as last week.

Geomagnetic activity started at "quiet" levels and increased to "unsettled" levels from the 23rd. By the 24th the level was up to Ap 17 units. The average was Ap 10 units. The aa indices, as supplied by the British Geological Survey for the period from the 13th to the 19th of February, saw levels decline slightly from 28 nanoTeslas on the 14th, to 18 nanoTeslas by the 19th. The average was 21 nanoTeslas, which is just K3.

Solar wind speeds declined from 530 kilometres per second on the 12th to 14th, to 400 kilometres per second until the 18th. The particle density averaged less than 10 particles per cubic centimetre during most of the period. However, levels increased to 25 particles per cubic centimetre on the 18th. The Bz showed no sustained northward or southward orientation, with maximum deflections of plus 7 to minus 7 nanoTeslas taking place on the 16th and the 18th.

I'll repeat the figures: spots - 21, flux - 73, Ap index - 10, X-Ray flux - A1.2.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 16th to the 22nd of February, increased from 6.3MHz on the 16th to 7.2MHz by the 20th, with an average of 6.8MHz, which is the highest figure so far this year. The darkness hour lows also increased from 2MHz on the 16th to 2.6MHz by the 18th, but then declined to 2.1MHz by the 22nd. The average was 2.3MHz. The daytime highs took place at 0900 on the 18th, at 1600 on the 20th and 22nd, and at midday on the other days. The darkness hour lows took place at 0600 each day.

I'll repeat the figures: highs - 6.8MHz, lows - 2.3MHz.

And lastly the solar forecast:

This week the quiet side of the sun is expected to rotate into view and the solar disc may well be spotless on most days. Solar activity is

expected to be at very low levels and solar flux levels are expected to decline to the low 70s. Geomagnetic activity is expected to be "very quiet" until next weekend, when levels may increase to become "unsettled". Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. With the nights shortening in the northern hemisphere, the darkness hour lows are expected to show some improvement, with levels up to 8MHz for the coming week.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Yankee and G7 Whisky Juliet series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Victor series.

Source record: 230017

In article <4h10si$29e@morgoth.sfu.ca> paul1@news.sfu.ca (Paul Erickson) writes:
>Interesting, does this mean that because people can talk without knowing
>how to read and we therefore do not need to teach the alpahbet?

There's no need to learn the alphabet in order to communicate by talking,
but learning to construct coherent sentences rather than run on fragments,
such as the above quoted example, would be a good idea. (And if we do
teach the alphabet, knowing how to spell with it would be useful.)

Speech and written communications are fundamentally different, though
they may encode the same ideas. Speech is the more basic and immediate
form. Written communication is primarily a non-realtime encoding of the
message of speech, though there are ideographs and pictographs which
don't have a direct one to one correspondence to spoken language. Fluency
in one form does not necessarily imply, nor require, fluency in the other
form.

But assuming we'd like a written fluency as well as a spoken fluency,
we would be unlikely to choose something as primitive as a pictograph
when we have the Roman alphabet so readily available. By analogy, we
would hardly want to use OOK Morse when we have readily available
better textual transmission methods, such as PACTOR II or Clover II.
It would be like hobbling ourselves to doing arithmetic with Roman
numerals instead of Arabic notation if we were to use OOK Morse instead
of better methods. Do they still teach long division using Roman numerals
in school?

>CW is the most basic form of communication possible, and to eliminate
>it is to promote a fundamental illiteracy. The digital modes should be
>enjoyed and developed, but someone who is not willing to develope even
>a basic facility for the most basic mode available doesn't belong there.

CW is *not* the most basic form of communications possible. In the
first place, damped wave spark is an even more primitive RF form than
a continous wave (and of course readily available coherent PSK methods
are more efficient in noise than OOK, if you would prefer to avoid the
primitive, as I would suggest you logically should).

In the second place, Morse isn't the most basic possible coding for an
OOK signal. Straight binary coding is more basic since there is only one
element duration to encode instead of the four of Morse (and binary is
more efficiently decoded in noise too). So whether you look at basic or
better, OOK Morse still doesn't lead either list. It's only when you
look at *traditional* that Morse comes to the top, IE the old progress
killing "if it was good enough for grandpappy..." mentality.

>thing I got a pair of hip boots to wear. It's getting pretty deep.

As I recall, military operators aren't required to hold commercial
certificates of any kind. So if he did get a commercial ticket, it
was of his own choice, and outside his military duties. Of course,
once upon a time naval ROs were required to know Morse, but that
wouldn't apply if he were a radar tech. In that case he may have
chosen to get a commercial General Radiotelephone with radar
endorsement for use when he returned to civilian life.

(This isn't intended to defend the outlawry exposed by the flamer,
just an attempt to show your counter arguments aren't sufficient.)

3048. Re: ARLB013 Question pool committee

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-29 00:00:00 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <4h4n57$fa8$1@mhadg.production.compuserve.com>
Source record: 230019

Gary,
ARRL did not "gather up their marbles and go home".
Their marbles were confiscated and they were removed from
the game because they declined to pledge allegiance to NCVEC.
The question pool committee cannot be a committee restricted
only to members of the NCVEC, Inc. There is no agreement
between the FCC and the NCVEC, Inc. The agreements are
between the FCC and the individual organizations that serve
as VECs. The QPC is a child of FCC, not NCVEC, so NCVEC
cannot impose "conditions" on participation. The FCC rules
bind all VECs to cooperate in maintaining a question pool
for each written examination element. A few VECs, even a
majority of VECs, cannot unilaterally create a corporation
as a mechanism for maintaining the pools and then exclude
other VECs who do not choose to participate in that corporation.
ARRL is not alone in choosing to not participate in the
corporation, but even if they were, it would make no
difference.
By the way, since the question pools are public, there is no
particular advantage to a publisher to be on the committee. You
and I could publish study guides just as easily as ARRL or W5YI.
With your brains and my looks, we would corner the market.

3049. Mods/Comments for Yaesu FT-51R

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-29 00:00:00 UTC
From: lui@netcom.com
Message-ID: <lui-2802960913350001@192.0.2.1>
Source record: 230020

Does anyone who owns a FT-51R have any comments on the unit or the programming software? Does the unit truly only receive to 470MHz? The magic number for me is 471.1375MHz, the frequency of our local police, which I like to monitor.

Does anyone know of any mods for the FT-51R (preferably keyboard) to extend the RX range? The unit is so small that I would think any hardware mods would be difficult.

Stephen
(Iching to buy an HT, as soon as I can decide which one!)

3052. Re: Drawing Schematic Diagrams on FCC Exams

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-29 00:00:00 UTC
From: Vincent Biancomano <v.biancomano@ieee.org>
Message-ID: <4h5490$sce@zeus.ieee.org>
Source record: 230023

In response to Kevin:
I took the Amateur Extra Class Exam in August 1967, and needed to draw 10 schematics/block diagrams. There is no question that the drawing of schematics was indeed required as late as the late 1960s, at least for Extra Class.

QST magazine had an announcement on this subject; I will attempt to secure the appropriate back issue with the story and post it to this newsgroup to clear up the matter.

Regarding the License Manual, it is rather inconceivable that the latest changes would not have been documented by 1975. It is a possibility, of course, but the information contained in the aformentioned License Manual would strongly suggest that schematic drawing was still a requirement for at least some grades of license into the 70s. We will see shortly.

a serial port is fine. BayPac sells a TNC with software for about $50. The TNC connects your computer to your 2 meter radio. Most people start out with 2 meter. You would have to load the packet software into your HP. It is not big. To get onto the internet you will have to find a "wormhole", which would be a packet node which allows conections to the internet. In Houston we use one provided in the nearby town of Sugarland. I think I saw a list of internet wormholes in QST a few months ago.

Good luck. I stoped using packet when I got onto the internet via phone lines. About the only thing you can receive is email and chat lines via packet internet connections.

The full story is NOT in the ARRL bulliten -- the ARRL directed NCVEC
not to communicate with its employees nor to do anything that could be
construed that ARRL was participating in NCVEC.
NCVEC just followed ARRL's instructions -- ARRL then realized that they
had cout off their own nose and are too egocentric to resind their
original letter to NCVEC.

No they're not. If CB'ers were happy where they were, they wouldn't modify
their radios for illegal out of band operation!

>Yes, as said above, the laws that I have seen, only pertain to handheld cell
>phone operation. I suppose somewhere it may be different, but I have NEVER
>heard of ANY law restricting any other type of communications.

In Georgia, covering an ear with a speaker or headset while driving is illegal, regardless of whether that speaker is in a cellular phone handset, a HT, or the headset for a HT, or for a Walkman. The law isn't heavily enforced, but amateurs here have been stopped and cited for wearing boom mike headsets (single ear) while driving. This obviously doesn't affect operation of normal mobile radios where the speaker is not held to the ear, nor does it affect hands free cellular phones.

As I understand the history of the law, it was introduced at the time when the Walkman was new, and was intended primarily to prevent people from driving around wearing Walkman headsets and thus not able to hear warning sounds. It was written broadly, however, so it applies to any use of a headset or handset that blocks an ear. Amateurs have complained, because an argument can be made that using a boom mike headset is safer than occupying a hand with a microphone, and that the typical amateur headset doesn't block hearing significantly, but the law still stands

and is occasionally enforced (especially by Alpharetta city police
as a revenue measure). Cellular providers have also been known to use
the law as a tool to increase sales of hands free car kits.

There was an abortive attempt to ban use of cellular phones while
driving in the current legislative session, on the grounds that it
is a distraction to safe driving, but that was quickly killed by
the cellular lobby. The Bells may now be babies, but they've still
got more political clout than the safety Nazis. Banning cellphones
has about as much chance as banning CBs. Too many people use them,
and there's too much money at stake.

O>I passed the "code" simply because it was a license requirement,
>though I've no interest in it whatever.

I thought so too in the beginning. Said I would just pass the code
requirement to get the HF privileges... After passing the Novice and
getting on the air though, I started to like it. Now it is the only
mode I use on HF.

I am not saying that everyone will be like me, but if you don't try it,
you will never know. Obviously you did learn the code and you
don't like it, that's fine, at least you tried it.

3068. HELP! with TS-520S cw receive

Newsgroup: rec.radio.amateur.misc
Date: 1996-02-29 00:00:00 UTC
From: jlynn@pennet.net
Message-ID: <4h5046$pcp@crash.microserve.net>
Source record: 230039
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Please, I need help.

I have a Kenwood TS-520S that has a problem with receive in the CW mode. When receiving in the CW mode, I can hear a station, and if I tune up the band, I hear the same station 2 KHz up frequency, from center to center. From the edges of the signals, the distance apart is 1 KHz. The higher frequency is the true operating frequency, and the lower frequency is a "ghost" signal. The "ghost" frequency is just as strong as the true frequency. The way this sounds is very similar to the 25 KHz calibrator marker signal. Sideband receives fine, no "ghost" signals.

I have gone through the manual, but nothing seemed to stick out as helpful. I don't want to send the rig away to have it fixed if it is something simple to fix, like turning a screw.

CW is my favorite mode, and with all the extra signals, the QRM is outrageous, and the QRM is nothing but "ghost" signals.

Any comments, hints, or solutions on how to remedy this problem will be most welcomed.

e-mail: jlynn@pennet.net

Thanks and 73's

I live in Ontario. Recently heard of someone getting a ticket for
operating their cell phone while driving. I didn't realize their was a law
against this.
I've heard that this is enforced in Australia.

How does this apply to us operating mobile rigs while driving. Is the
stipulation relative to not doing anything which is making it unsafe for
driving the vehicle?

I think of the many public related utilities which use and rely on 2 way
communication while doing their job. Is their a distinction between cell
phones and 2 way radio's?

3076. KING TV Unfair to Seattle Ham.

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-01 00:00:00 UTC
From: bd703@scn.org
Message-ID: <DnKG0r.Eno@scn.org>
Source record: 229949

Earlier this week, KING TV in Seattle did a story about several neighbors in the Magnolia district who have been getting interference to various items of home electronic equipment (tv, radio, cordless phone , alarm system etc). The neighbors are fed up with the interference and have contacted the FCC, KING TV, and have started a petition to get the station alledged to be the source off the air.

The station in question is operated by Extra class Gene Erckenbrack, W7VY.

The story seemed to imply that the amateur operation wasn't in compliance with FCC rules.

The TV people did not arrange to do a fair interview with Erckenbrack; instead the crew showed up on his doorstep and did a confrontational interview through the front door.

Erckenbrack mentioned that his tv doesn't have trouble and that poor filtering/shielding of the neighbor's equipment was the likely cause, not his operations.

This is an upper-class neighborhood and at least one of the neighbors is an attorney.

The story was really slanted in favor of the complainers. I wonder if perhaps someone in the neighborhood has ties to KING TV ?

Can someone comment a little more? I mean there's the old Shannon's law
about bit rate=K * bandwidth * log (SNR). Somehow, I have a real hard
time imagining digital stereo UNDER an AM broadcast.

Are they, perhaps, using spread spectrum and taking up a more of
the band than just the one station. Perhaps all the bandwidth between
the station and its nearest neighbor on the dial in that locale. In a way
that won't interfere with faraway station in that band?

The Motorola Micom X is a HF transceiver that has ALE. It is front-panel frequency programmable via keypad only (no VFO knob, unfortunately, but it does have a clarifier). 150 watts output I believe, runs on 13.8VDC. Has the whole line of automatic tuners, portable "strategic" cases and accessories, etc.. Pretty cool radio. My buddy Lou, N3JKM, got his hands on one - it came into his MSS as a trade-in, and nobody else wanted anything to do with it (HF? what's that?)

Ever try Code Quick? It worked for me. Probably the best way to really "learn" the code after you get the characters down is to not buy an H/T when you first get your license, but to invest in an HF rig and jump right into the novice bands. It's scary at first but you learn fast if you stick with it, and your speed gradually increases.

>
>Have you ever been employed as a spin doctor, Gary?

As a matter of fact, I have worked in politics, and I'm
keenly aware that perceptions are at least as important
as legalities when dealing with groups of people, often
more important.

>ARRL was a participant in the QPC until "conditions" (not
>mandated by FCC) were placed on their continued participation.
>Since they did not accept these "conditions" (accept a seat
>on the board of NCVEC) they, and other VECs, were denied
>further participation on QPC, even though the FCC specifically
>told NCVEC that such membership was NOT a requirement.
>
>As an analogy, let's just suppose you are lawfully
>participating in some activity, perhaps acting as a
>volunteer lifeguard at the public city pool. All the other
>lifeguards form the "Amalgamated Lifeguard Corps" and
>declares that all volunteers must join, or can no longer
>serve. The city government did not mandate the "ALC" and
>does not require membership of its' volunteers. Can
>"non-joiners" now be excluded from their duties by this group?

In a "right to work" State, you couldn't be *legally* excluded,
but as a "scab" you would certainly have soured any working
relationship you might have had with the others. In any situation
requiring cooperation, the scab is going to be at a disadvantage,
and is going to be a disruptive influence.

The ARRL is acting like a scab in this case too (or at least
presenting such an appearance). The ARRL needs to explain why
it refused to accept a seat on the NCVEC board. The answer
"because we aren't legally required to do so" isn't good enough
in shop floor politics, and make no mistake, shop floor politics
are important. The ARRL needs to reclaim the moral and political
high ground here. Otherwise it looks no better than K1MAN, using

the letter of the law to get its unsavory way.

The ARRL has a history in its dealings with others that isn't easily shaken. It needs to consider the *perception* of arrogance that may be generated by its actions. This is particularly important in a membership organization because those members, and potential members, are influenced by those perceptions as well. In grade school parlance, "Hiram doesn't play well with others."

>To do packet radio you need a computer, a TNC (like a modem) and a radio.
>I am not sure exactly what your HP is capable of but my GUESS is that if
>you can run a terminal program you can probably do packet.

More accurately, you need an I/O device which will supply a display and keyboard (a dumb terminal will work, you don't *have* to have a computer). In this case, the HP100 has a built in terminal program you can use, and it will run other DOS programs up to and including a version of KA9Q TCP/IP, so it will certainly work. However, the screen is a nuisance because it is less than 80 columns, and the keyboard's size makes touch typing very difficult. That'll make most formatted text difficult to read, and make realtime replies slower than normal.

I've used the HP100 for portable packet. It certainly works, but it is not as convienent to use as a full size screen and keyboard. Just use a 3-wire cable to the TNC, IE TxD, RxD, and signal ground. Flow control, if required, has to be done via XON XOFF protocol.

<snip>

The absurdity of this, of course, is that in a modern sedan with the windows closed and the radio turned on, the driver will hear even less than if he had full closure double earphones.

Gerhardt G. Herbst II, is the patent holder for "Cold Spot Module".
This product is for sale to an individual or manufacturer.

The "Cold Spot Module" is used to effectively reduce the operating
temperature of integrated circuits such as computer CPUs to maintain
reliability under extreme operating conditions. This module is protected
under a U.S. Utility Patent issued in October of 1995. A Utility patent
provides the strongest protection under U.S. law.

An independent North American Market Study was done on the product and the
potential market has been identified.

The product has not yet been introduced to the general public but is referenced
in the U.S. Patent catalog which is posted periodically. For an on-line reference
refer to:

http://www.uspto.gov

Search on Patent Number: 5457342

The title abstract is: Integrated circuit cooling apparatus

Note: A search on just the patent number will bring up the details.

Exclusive rights can be purchased reasonably with negotiable license term.

For further information, contact Gerhardt G. Herbst II.

3090. Re: ARLB013 Question pool committee

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-01 00:00:00 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <4h7f5n$b97$1@mhafn.production.compuserve.com>
Source record: 229963

Scotty Neustadter said:

>....ARRL directed NCVEC not to communicate with its
>employees nor to do anything that could be
>construed that ARRL was participating in NCVEC.

Don't confuse the NCVEC with the QPC (Question Pool
Committee). They are separate and distinct entities.

ARRL was a member and primary participant in the QPC from
the beginning, long before NCVEC was incorporated.

Because ARRL (and other VECs) chose not to join this new
corporation, NCVEC has basically tried to kick them off
the QPC as well.

CO4_iota- [Cuba (NA-056)] Luis , CT1ESO , has scheduled a DXpedition to La
Juventude Island (Los Canarreos Arch) to be held in March.The IOTA
Ref. is NA-056.Callsigns and dates will be announced later.This
will be a few days DXpedition , Luis is going their in vacations !
FS - [Saint Martin] WX9E (Paul) , N0BSH (Mike) and WE9V (Chad) are in
FS5PL (Lionel) QTH.They will stay their untill March 6th signing
FS/<callsign>.Operation in all bands , look for them in RTTY. QSL
via their Home calls.
FT5 - [Crozet, Kerguelen & Amsterdam] The dates for FR5HR (Rene)
operation are :
FT5W Crozet untill 05/03.
FT5X Kerguelen from 08/03 to 20/03. (12 Days)
FT5Z Amsterdam from 22/03 to 28/03. (6 Days)
The dates could change in case of bad weather cndx.QSL via F5RRH
H5_ses - [South Africa] Starting 31st March 1996 the H5 prefix will be on
the air , the call will be H5ABP - is a special event station
to celebrate the 97th anniversary of World Scouting.Operation on
every sundays.
J5_iota - [Bijagos Arch. AF-020] I4CLK (Franco) is going to this Island from
March 27th. to April 6th.The IOTA ref is AF-020
P5 - [North Korea] The Project Group DPRK is working on a project in P5
and they plan to be active from their as P51DX.Due to bad weather
(severe winter in N.Korea)the DXpedition will not occur before
April 96.They want to give formation to some local people and
develop the Amateur Radio in this country to have some P5's always

on the band , just like ZA (Albania).
PJ7 - [St. Maarten] Untill March 9th, ND5S (Ron), KF5LG (Sue), AA8GL
(Bill) and KB8ZXO (Dorothy) are active from PJ7.They will sign
/PJ7.QSL via home calls.
R1FJ - [Franz Josef Land] R1FJZ (Sergey) will be in this country untill
August 96.He is very active on the low bands (160/80 and 40 mtrs).
Russia can stop financing the Base in a near future and this DXCC
country can become most expensive !!
TF_iota - [Westmann EU-071] ON6QR (Fred), ON7PC (Peter), ON5OO (Jack) and
ON1KSZ (Stef) will be in Iceland. During their stay , March 26th
to April 2nd , they will participate in the CQ WW WPX SSB and
make an operation from Westmann Isl (IOTA EU-071) on March 28th.
They will sign /TF7.QSL via home calls. [Reykjavik = IOTA EU-021]
VP2E - [Anguilla] VP2ES (KC0ZC - Stew), VP2EZ (WA0PUJ - Glenn), VP2E/N0ZSU
(Loring) and VP2E/KL7YL (Vivien) will stay in Anguilla untill March
6th.QSL via home calls.
VQ9 - [Chagos Isl.] Ron , AA5DX , will be active for 4 months from this
Islands as VQ9DX or VQ9RM.Special atention to 160/80 and 40 mtrs.
XX9_iota- [Taipa Isl. AS-075] JE1CTM (Mine) is planning a visit to this Isl.
in Macau.
ZD7 - [St. Helena + Ascension Isl.] Andy (G4ZVJ) will be active as
ZD7VJ from St. Helena only in CW.Possible operation from Ascension
Island as ZD8VJ.Operation period from 29 March to April 12.
QSL via G4ZVJ (See hi new address below on QSL info.)
ZL8 - [Ilha de Kermadec] All the paperwork for this DXpedition is done
and the team is already formed , they only need one JA operator
The Team is : ZL2DX, ZL2HU, ZL2TT, ZL2AL and WA3YVN. Operation will
be from Raoul Isl. for a 11-days effort (4 to 14 of May 1996).
The callsign issued is ZL8RI.They still needing some funds to make
this possible ,send your donations to: SGI Expeditions - Kermadec,
Project, P.O. Box 2235, Melbourne, FL 32902-2235.
ZY5_dfb - [Brazil] From 8 to 10 of March , ZY5A will be active from Marta
Lighthouse (Ref. DFB SC-012).Operation on CW/SSB , 10 to 80 mtrs
and also on the Brazil DX Net (21.225 or 14.240 Mhz , 11:50 UTC).
QSL via PP5SZ, Pedro Sirzanink, Rua Padre Roma 194/704,
Florianopolis/SC, 88010-090, Brazil.
ZW5_dfb - [Brazil] Ararangua Lighthouse will be activated with call ZW5CIA
The period of operation is from 28 to 30 of March.Operation modes
will be CW/SSB , 10 to 80 mtrs and QRV also on the Brazil DX Net.
The Ref. for this Lighthouse is DFB SC-13. QSL via PP5VB:
P.O. Box 13, Imbituba/SC, 88780-000, Brasil.

Portuguese Packet Cluster Network -> There have been some news links between
the Portuguese nodes. They used to be only 2 CT nodes linked to the European
Packet Cluster Network but now we have a link the the South part of Portugal
and the result is 8 nodes linked, but not always. Tests are being made to
have a solid and better network !
The nodes are :

CS1GDX (Lisbon , GPDX node)
CS1NDX-5 (Aveiro , NPDXG node)
CT1END-5 (Cacem , support node to CS1GDX)
CT1EPS-5 (Almancil)
CT1EIF-5 (Moura)
CT1EIT-5 (Almada)
CT1YCM-10 (Coimbra)
CT4KQ-5 (Viseu, the only link in HF to the European Cluster Network is
made by this node)

CS8B & CT6ARU QSL's -> The QSL's for CS8B , Morraceira Isl , are printed.We
are waiting for them to start sending replies as soon as possible.Also the
CT6ARU has a big delay due to burocratic problems.When we have the CT6ARU
QSL's ready we will inform you !

Portuguese Activations -> During the weekend of 24/25 February were active
CT4UW/p - Periscoxe Castle Ref. DCFP C-064
CT1ETG/p - Mouros Castle Ref. DCFP C-120
CQ5EWA - Nazare Lighthouse [NPDXG # 12]
CQ5FMX - Nazare Lighthouse [NPDXG # 12]

W8CNL address changes -> Ray's address is going to change in March 1st.His
new address will be : 5 McKenzie Circle, North Augusta,South Carolina,

29841 U.S.A. . Ray is the QSL manager for 9K2ZZ , This address is valid also
for Derek (KC4ELO manager for 9K2ZC) and 9K2YY.

>... When receiving in the CW mode, I can hear a station, and if I
>tune up the band, I hear the same station 2 KHz up frequency, from
>center to center.

Jeff, it sounds to me like your rig has both the upper and lower sideband carrier oscillators turned on simultaneously. That's the only thing that comes to mind which could cause the sort of problem you've described.

I don't have any Kenwood gear so I can't provide any hardware troubleshooting tips. Hpoefully someone else will step forward with more details. Good luck.

Regards,
Bill Sorsby, N5BU

3094. Re: Whatever happened to AC-SSB ??

acssb radios are being marketed in the us by SEA electronics. They are trunked, as the previous reply stated. The LTR format seems to be the standard. There are several companies setting up regional systems that are linked via spread spectrum. My shop is in the process of building up a acssb repeater. Neat stuff, indeed. 73, Will

The 1995 version of the little ARRL Repeater book was almost useless,
at least as regards Arizona repeaters. Whether it was OK for other
states, I don't know.

Tony KC7HDT

>the justification that requires people to know anything at all in order
>to obtain an amateur license.

The simple answer is that the government has an interest in amateur service operator certification because it is one of their tools in managing the radio frequency spectrum (RFS). The primary goal, in my opinion, is the avoidance interference among the users of the RFS. It is a particular point of interest by the government because amateurs can operate, in Canada and the U.S., with non-type approved equipment on non-fixed assignments within their allocations. Furthermore, at least in North America, amateurs are permitted to home build their equipment, thus increasing the likelyhood of interference to other users of the RFS. Therefore, the case for amateur testing is quite clear and leaves little room to manoeuvre otherwise.

>If one can claim that learning something
>one will never use is not appropriate, than requiring one to learn
>*anything* that one will never use is also not appropriate.

This is common rendering of the the arguement reductio ad absurdem. But in order to use this means of argument in this instance would preclude the government's interest in the avoidance of interference by amateurs. The case is uproven and moot.

>In my case,
>all I need know are those things that apply to HF QRP CW operation. :-)

>Using an analogy I read into this discussion, I should be able to fail
>every other exam question and still be awarded a license to do what *I*
>want to do.

This is the arguement that is most often used by those who support the mandatory testing of Morse code prior to its use on HF; that is to say that we have to be knowledgable in all modes of communications in order to use it. That is a pretty fair arguement except that knowledge of Morse code is a Pavlovian skill, and does not indicate that the individual is capable of operating an amateur station. Yet the lack of Morse code knowledge alone, to the exclusion of all else, bars an individual from operating on the HF frequencies. There is no such impedimenta in so far as testing the knowledge of an individual with respect to voice, data or image transmissions. So indeed this is the present case - one can be ignorant of most, if not all that other modes of communications, but one must be able to copy Morse code.

Regardless, even on its own merits, it does nothing at all in order to ensure that the government is satisfied that the individual is competent to operate an amateur station. Although it can be argued that our respective administration must adhere to the international requirements, it none the less is not applicable interference avoidance prescriptions. (Morse code testing is retained, in my opinion, more so out of convenience. I suspect that if a case for national interest to delete Morse code testing, I doubt that it would last long on the books afterwards.)

>are systems that do beat CW in terms of either one alone.
>

But primitiveness of the CW station and its arguable simplicity fails to justify that amateurs must know Morse code in order to even think of operating them. (Most of your assertions are arguable, if not outright incorrect. But that is not surprising that many amateurs believe the same when they have been spoon fed the same Pablum for decades, even though it is no longer demonstrably true. But that is not germaine to the arguement.) Even if we were to extend the benefit of the doubt to Morse code being so efficient, why is it necessary that the government use its power and force each and every amateur who wishes to use the amateur allocations below 30 MHz to know Morse code to a certain standard, when indeed, the knowledge of such does not

contribute to the efficacy of operating an amateur station. What is it about Morse code that contributes to the bona fide concerns of the government to ensure orderly access to the radio frequency spectrum? Why are those who wish to continue Morse code testing are unable to consider that if Morse code is to survive, it should do so on its own merits, and not on government coertion?

>Is there an advantage to require that Amateur Radio retain the ability to
>use this simple communications system? I don't know for sure, but I do
>believe so.

No doubt that there is an advantage. I would encourage anyone to undertake to know Morse code, based on any of the arguements that the poster has expressed. But what is at issue is should the government demand that amateurs know Morse code, particularly to the exclusion of all else. In contradiction to the originator, I do not believe so.

>Is is part of the justification for Amateur Radio? What
>*is*, or should be, the justification for Amateur Radio.

But Morse code testing or the lack thereof is tangental to the justification for the amateur service, if even relative. I would prefer to discuss this in another thread. I would invite anyone who wishes to do so to start one on the justification of the amateur service.

(snip, snip)

>In my heart, I do believe that eventually all of this will sort itself

I agree that the "old phartz" moniker is rather outlandish, used more for effect than for substance. I guess it is just another example that the individual who uses such characterizations has forgotten that one can attract more flies with honey than with vinegar.

>The divisiveness that is occuring now is doing as much damage to Amateur
>Radio than anything I have seen. If there is one reason to justify the
>continued existance of Morse Code testing it is that it is an important
>tradition to so very many of us -- not just a few of us, and not all of

>no one would ever actually do that, but I think that those who expect
>that change should happen overnight, tradition and the feelings of older
>hams be damned, should stop to consider whether the damage and hurt

>feelings are really the most effective tool they can use.
>

This is an unusual aplogia for those who support Morse code testing, as if to say that it is all the fault of those who dispute the need for continuing the Morse code testing program. The problem with respecting tradition is that it must not be tampered with at all, resulting in frustration to those who wish the break those chains of tradition. I don't dispute that the destruction of tradition may be hurtful to those who cling to it, but I don't believe that it should be avoided for that reason. Moreover, if spears are to be thrown, the pro-code crowd have not been exactly model citizens either.

>I suspect that if Amateur Radio were to settle the question by
>referendum, the Code would win by about 2:1 at this point.

Do you have evidence of this? If so, we would be pleased if you would share this information with us.

>If it would
>let us settle it for 5 years, say, I would love to see it happen.

I doubt that, even if your contention was true, would settle the question. As much as I have sympathy for the pro-code position, it is not justifiable. Do we as amateurs continue to inflict Morse code upon those who wish to be amateurs solely because we believe that they should do so, particularly if there is no reason to for it?

>Unfortunately, I can't see how it can be settled by a "majority rules"
>vote, so we need to find other solutions. Reasoned discussion is one.

It won't be settled until indeed mandatory Morse code testing is abolished. Subsequently, there will be great wailing and gnashing of teeth, tremendous flourishes of statements that they will no longer participate in amateur radio.

Reasoned discussion is good because it clarifies one's opinions and thoughts; however, there also has to be the good-will to recognize the inevitablity of change and that precepts that were once sacrosanct are no longer a consideration in our daily lives.

>The other is to look for solutions that guide us in the direction I think
>we are headed anyway, allowing the Amateur Radio Service to continue to
>evolve, rather than mutate.
>

We progress, whether it is in tiny steps or giant leaps, but we progress none the less.

It's being marketed (very successfully) in the UK by Securicor as
'LINEAR MODULATION'

I toured the factory (near Bath, UK) last year and saw a large number
of radios being soak tested - these were badged with another vendor's
name, and were destined for Chicago.

>Regards,
>Vince, WB2EZG

I took all the tests except for the Extra between 1972 and 1975, and never had to draw any schematics, but sure had to identify a lot of different types of circuits. Also had to identify in block diagrams wherre certain components would be. On the General, I seem to remember only having to identify a particular type of oscillator. Had a lot of different types of circuits on the Advanced, though. In fact, the Advanced exam back in 1975 was MUCH more difficult than the Extra exam I took in 1994.

> Thanks for the info on the Collins Collector Association

When I was licensed in 1958, Collins was a dream. I figured, though,
that I would grow up, become rich, and buy a house full of Collins.

Now, at 51, I have just lost my job. "Downsizing" and Collins is still a
dream.

However, I have several prospects on the horizon and I have a few dollars
squirreled away.

I plan to buy a Collins 30L1 at a local hamfest in June.

Any tips?

The letters "SOS" have no particular words associated to them.
They were chosen in the early days of Wireless Telegraphy because
they were easy to send and easily recognised.

My thoughts exactly! Maybe we should have an e-mail letter-writing campaign going against KING TV. Perhaps if they were informed of the public service work we hams engage in, they would offer us equal time on the news (Our Top Story tonight - Magnolia neighbors jump to conclusions).

Does anyone know KING's on-line address?

3105. QRP Info?

From: blombard@iu.net
Message-ID: <4h5qgq$s67@cc.iu.net>
Source record: 230043

I'm sorry if this is too mundane, but could someone tell me the "preferred"
QRP hangout frequencies on all HF bands?

I used to have this info, but can't seem to find it. I recall CW being at
60 kHz up from the bottom of the bands, but I'm not sure.

Also, what sort of volume does the QRP mailing list put out? A hundred
per day? More or less?

Thanks es 73,
Bob

Hey everyone - gove 17 meters a try!
I have been on it every day and made a lot of DX and domestic contacts, and even worked a few rare ones. The action heats up at about 1200-1300 daily, with openings to Europe most days for a little while later in the morning. I have heard it open on into the evening hours some days lately too. See you there! I work CW on 18075 and SSB on 18140 kHz or I just troll for QSOs.

I bought one about 2 weeks ago. Very nice HT. Lots of great features I will probably never use. I tried to tune in the freq. you mentioned and as high as I can get is 470mhz. It is a super unit. I had a FT 470 for several years and just wanted to get a new one. One thing to note is just any speaker mic for Yaesu won't work. They have only a few listed for this HT. I had to buy a new one because of DC supplied through the jacks. Could probably have moded the old mic but wasn't worth the trouble.

I recommend the radio.

>
>(x = a channel number)
>
Well Eugene, you need to turn the radio off...
then press the function + the A key at the sme time while
turning on the radio.
the display will then turn to a C.
The radio will now wait for the user to input the 4 digit
lock/unlock code. (default is 1234)

Hope this helps.

AMEN, if you will take the time to learn it you tend to appriciate your accomplishment and MAYBE take radio a little more serious.

CW is a dying art I would hate to see it die.

: Steve

Another HOKA user emailed me portions of the digital signals faq. I
had no idea of the number of digital data formats being used over the
air. Learning all this stuff will keep me busy for a while.

I'm curious about what percentage of the time the autoclassify mode
successfully identifies a transmission.

3116. This Week in Amateur Radio #153 (for air through 3/8/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JLIqLDC.sanderman@delphi.com>
Source record: 229985

Here is a summary of news items covered on edition #153 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 8-Mar:
-
1. Former ARRL Director and Wife Murdered in Louisiana
2. Amateurs Assist in Medical Emergency for Infant
3. Your Name and Call Sign Here, On a Rocket to Saturn
4. "The RAIN Dial-up" from Chicago
5. ARRL Asks FCC to Decertify National Conference of VECs
6. Commission Eliminates Conflict-of-Interest Provisions in Rules
7. Upcoming Special Event Stations with George Bowen, N2LQS
8. Amateur Radio to Get More National TV Exposure This Month
9. Seattle's KING-TV and Neighbors Bash Ham for Alleged RFI
10. "Time" Recognizes Two Amateurs as "Local Heroes"
11. Tunisia, Other Arab States Permitted Contact with Israeli Hams
12. Weekly Propagation Forecast
13. "Amateur Radio Newsline" - Edition #968 from Los Angeles
14. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
15. Some Comments (and Thanks!) on Beginning Our Fourth Year
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family of Leesburg,
Indiana, and users of the N9SBH repeater, where "This Week in
Amateur Radio" is heard on 224.16 MHz and on 146.505 MHz simplex,
serving amateurs in Fort Wayne, Columbia City, Warsaw, Elkhart,
Goshen, and Syracuse. Acquisition costs for "The RAIN Dial-Up"
have been provided by a grant from Ken and Marilyn Davis, KB2KFV,
and KB2JZI, of Green Island, New York.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "Tech Talk Network" each Saturday at 8:00 PM (EST)
on the Telesat Canada Anik E2 commercial communications satellite,
transponder 18 (9B vertical), 5.8 MHz wideband analog audio
subcarrier (4.06 GHz), located at 107.3 degrees west longitude in
equatorial geosynchronous orbit. It's carried on VHF/UHF repeaters
throughout North America and on 160 meters at 1860 kHz. Contact
your local amateur radio club or repeater operator if "This Week in
Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Satellite space and uplink services are provided by Skyvision,

Incorporated as a service to the amateur radio community. Further information is available from George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

3117. 3/3/96 Ham Radio & More on 5.065mhz

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-02 00:00:00 UTC
From: lenwink@indirect.com
Message-ID: <4h9v9t$kif@globe.indirect.com>
Source record: 229986

Source record: 229988

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified page will allow Hams to find equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear you'er interested in, you are also provided with easy point-and-click e-mail access, directly to the Ham that listed the item.

For those Hams with gear to sell, take note! there is NO charge to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting(s) will go on-line, in our classified search engine, in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission your "For Sale" classified is immediately on-line.

```
I will be purging the classified listings initially, about once every
month, but that timeline will shorten as our classified numbers grow.
```

3122. Re: ARLB013 Question pool committee

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5LKob83.sanderman@delphi.com>
Source record: 229991

Hans, you make some excellent points in your numerous replies. As a Field Appointee, I don't always agree with the actions of Hq., but I back them solidly on this matter. A few of the points have not really been addressed here by Gary or Scotty, most notably, the legality of NCVEC Inc.
First, Part 97 effectually makes NCVEC Inc (merely by its organization as a corporation) noncompliant. It was apparent (from early in this process when the issue of incorporation first came up) that ARRL had numerous reservations from both legal and liability standpoints. Hq. argued against the formation of such a corporation on those grounds. Jahnke effectively communicated those reservations to the QPC but was outgunned and outvoted. This action cause ARRL to be denied a seat on NCVEC Inc. These are the salient points of this issue, not whether the "ARRL gorilla" is 800 pounds or a slimmer and trimmer 500 pounds. And besides, if you guys had really wanted to bash the League, you would have referred to it as a "one ton 'guerilla'", not just a plain ol' 'go-rilla'!
But say this, you guys have really done a swell job of giving Sid (who originated this thread) and all of us something worthwhile on which to chew! Thanks to all of you for discussing (attacking?!?) the issue rather than the people taking part.
73 to all...

About $200. I just got the $95 20m to 6m transverter and have started work on
it. Its a very nice kit. Not quite up to Heathkit standards but very close. I'm
impressed and will write up a review in a future edition of Ham Radio Online,
available at

> 73, de Hans, K0HB
>
> --Support your local Amateur Radio clubs.The ARRL was never asked to "pledge allegiance"
to NCVEC, they were
invited to place a member on the board, they declined and asked NCVEC,
Inc not to talk to their employees nor take any action that might imply
that the ARRL was party to NCVEC. Given this edict from the ARRL, NCVEC
had no choice but to sever its tied with the ARRL employee who was on
the QPC

What is the cheapest way to get a handheld that can give me around 5W on
15xMhz? Looks like purchasing an Amateur Radio and then performing a mod.

Where can I find out about Mods and which are the suitable radios?

Regards,

Sara.

PS I am having difficulties with receiving news, please
could you copy your post to my mailbox, thanks.

3131. Need HELP from Syracuse, NY ham(s)

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-03 00:00:00 UTC
From: white_hae@ccsua.ctstateu.edu
Message-ID: <1996Mar3.100537.1@ccsua.ctstateu.edu>
Source record: 229852

Hi
I will be moving to the Syracuse, NY area in June or July, 1996 to pursue
my Ph.D. in ecology. I am looking for some assistance from a Syracuse-area
ham in our search for somewhat rural rents within a 20-30-minute commute
range from the University. Comments on possibilities (such as towns
to check out, newspapers to subscribe-to, or more detailed info) would
be appreciated. Optimally, we would like a rent on a hilltop QTH :) so that
we will be able to pursue our VHF+ weak-sig interests...but we would be
happy with a landlord who would let us erect our 40'-tower, OR our
Butternut HF6V vertical and a wire antenna (our current landlord here
in Central CT allowed us to turn the backyard into an antenna farm :) but....
Any help, leads, ideas, warnings, etc. would be appreciated.
Thanks/73 de N1QVE, Harry

In response to VUBS79A@PRODIGY.COM --

To take your comment to its logical conclusion, we might say that ham radio itself is outdated. Remember that the main reason for the existence of amateur radio is to provide emergency communication as a public service. How do we measure up today against new technology that includes sat-com, gps, cellular (voice) and cellular (data), all of which can be used by the untrained during the same type of "emergency" situations that we might face as amateurs providing needed communication. Seems as if amateur radio may have just "lost its license" in the 90s. Do we exist today just for nostalgia reasons and CB-like operations on 75 and 160?

Don't get me wrong...I have an extra-class license, have been a ham since 1968, and really enjoy the snap-crackle-pop of old tubes, and still search for DX. How can we convince people that we still provide a service in return for the spectrum granted us?

Food for thought, or just playing devils advocate? You decide!

Cona person just go to the Ham Radio Supply Store and buy a commercially manufactured repeater? I understant these would probably be quite expencive, but not all of us are technically minded or interested in tinkering. I am mainly interested in 440m and UHF bands for this "open" repeater. My immediate area has only 2 repeaters serving it, and I am interested in sett9ing up a third with autopatch capabilities. Any help would be greatly appreciated.

Dave

3136. FCC PP-96-07

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-04 00:00:00 UTC
From: jimwills@ballistic.com
Message-ID: <4hfn1h$7d7@news2.realtime.net>
Source record: 229857

March 1, 1996

Before the
Federal Communications Commission
Washington, DC 20554

Comments In the matter of)
FCC Plans and Policy Docket)
96-07) PP 96-07
)
)

COMMENTS:

Functions which could be privatized

All responsibility for Amateur and Commercial testing should be completely turned

over to the National Volunteer Examiners who have formed a corporation to handle

this process. The organization is NCVEC, Inc. organized under Article 501(c)3 of

the Internal Revenue Code as a non-profit corporation. This would remove the

workload concerning any oversight and testing from the FCC. The FCC should

retain licensing responsibility.

Burdensome Rules

1. FCC should relax the rule that requires separation of Amateur testing and

Commercial testing, i.e. separate rooms and separate testing teams. This requirement

puts a tremendous burden on the testing team who are all volunteers. When the FCC

was handling all testing they did not impose such a rule on themselves.

2. Eliminate International Morse Code requirements above 5 WPM and make 15

WPM, 20 WPM and 25 WPM plus (+) an endorsement to the license of any

Comments PP Document 96-7
Jim Wills
Page Two

operator class license. This should satisfy the "old CW heads" and still allow

licensees with no interest in CW to obtain higher class licenses. To my knowledge

we are the only Federal service still requiring proficiency in International Morse

Code.

FCC Filings and Comments

The FCC should join the new age of communications by allowing reception of

Filings, Comments and Petitions by e-mail, floppy disk, FAX or other data

communications methods. This would eliminate the need for handling so much paper

on both input and output ends, thus preserving our natural resources and relieving an

unnecessary burden on the already overloaded postal service.

Customer Service

The FCC should publish e-mail addresses for its personnel in an on-line phone book.

This would allow direct access to personnel concerned, to answers questions quickly.

At present the FCC answers correspondence in 30 to 90 days if at all.

Internet

1. The Internet is not broken and does not require fixing by the FCC. Abandon all

research on suggesting to Congress ways and means of taxing the Internet. It is not

the FCC's or any other branch of government's responsibility to concoct new and

innovative ways of taxing everything. Your primary mission is to serve, not tax. "If

you want to kill something, tax it." Internet users are already paying several state and

local taxes on their telephone service plus sales tax on the service itself here in Texas.

2. The FCC should cause Congress to enact severe prison penalties for anyone

authoring, or knowingly and willfully spreading computer viruses by any data means

whatsoever. This would be a more responsible and noble goal for the FCC to pursue

rather than trying to tax the Internet.

From: subich@ramlink.net
Message-ID: <4hdj6d$t9g@ram2.ramlink.net>
Source record: 229858

In message <313792BA.BD5@iquest.com> - Scotty Neustadter
<scotty@iquest.com>
writes:

:>The ARRL explicitly wrote to NCVEC telling them to ....
:>"kindly rescind any and all references to the Leagues's participation
in
:>the NCVEC, Inc. and refrain hereafter for any indication in any
:>documents or in any remarks of officers or directors of the NCVEC,
Inc.
:>which would lead anyone to conclude that the League is a participant
in
:>the NCVEC, Inc. The would include reference to the participants in
the
:>NCVEC in FCC pleadings or other correspondence."
:>
:>If NCVEC complies with this request, how can a member of the ARRL
staff
:>be on the QPC committee? The membership is public -- I know I'm one
of
:>the members

This isn't an issue of organizations or anything else ... the FCC
established
the QPC and it *IS NOT* a function of NCVEC, Inc. In its charter, the
FCC
required that the QPC be open to participation by ALL (accredited)
Volunteer
Examination Cooridnators and by incorporating the organization, NCVEC,
Inc.
effectively precludes participation by the *ONE* VEC which coordiantes
nearly 2/3 off all examinations.

I am not an appologist for ther ARRL, but in this case they are right.
The
question pool process has been hijacked by a group of minor players and
the
Commission should either demand that NCVEC, Inc. participate in a truly
independent QPC or revoke the accreditations of the members of NCVEC,
Inc.

Seats on the QPC should be apportioned based on the number of
examinations
a particular VEC coordinates. Those VECs who coordinate only a hand
full

of exams a year in a limited geographical area should not be permitted
to
hold the whole process hostage to their personal political adgendas.

73,

+
+ Having recently discovered the joys of Perl and CGI on the WWW, I
+ decided to get into the swing of it by coding a WWW page where one can
+ take practice Amateur Radio Exams. The page is now complete and has
+ all five examinations along with figures (including Extra).
+
+ The results are displayed question-by-question and then broken down by
+ subelement so that you can see which areas need extra study.
+
+ I am also saving the results from each examination taken so that one
+ can get some idea of the relative success rate for each Exam and
+ subelement. This may provide some interesting information as time goes
+ by.
+
+ The page can be found at:
+
+ http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

```
+
+ I _think_ it should all work as expected but I welcome any reports of
+ bugs and/or suggestions!
+
+ I hope this is of use to people interested in upgrading.
+
+ PS: If the page is slow, or not to your liking, try Ham Exam at:
+
+ http://w5ac.tamu.edu/ham-exam.html
```

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily

mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and

years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource

Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites (In addition to enabling
the Elmers List to be viewed as hypertext, the site marked with an
asterisk also offers WAIS index searching by keyword):

+ http://www.gonix.com/pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being
promptly updated in particular - the sites at Ohio State and Smart
Pages are no longer recommended for accessing a current copy of
the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Devon Bowen KA2NRC

bowen@olsen.ch

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights
into DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest
Group (BBSSIG) is sponsoring a working group to generate and
distribute a series of information bulletins which will serve to
instruct packet radio users in a variety of areas. These bulletins

will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I wonder how Mr Herbst slipped this one past the prior art
investigation? This technology has been around since the early 70's -
at least. For example, IBM and Amdahl main frames made extensive use
of it.

The following is a QST

The ARRL tells the FCC that the VEC question pool system is broken
and it wants it fixed -- now! Also, the FCC tells an out of band CBer
to pay up and the DXCC bans a famous DXer for life. Find out who on
Newsline report number 968 coming your way right now!

(*****
ARRL ASKS FCC FOR NEW QUESTION POOL COMMITTEE

The FCC is being asked to step in the middle of a dispute involving
amateur radio license examinations. It's an issue that has some
asking whether the VEC question pool is broken or whether the League
is trying to become the nation's only ham radio exam coordinator.
David Sumner, K1ZZ is the League's Executive Vice President. He says
the mechanism to maintain question pools for amateur license tests has
broken down and no longer operates as Commission rules require.
That's what Sumner told FCC Private Wireless Division Chief Robert
McNamara February 23rd.
The League also wants the Commission to issue a public notice to
help clear the way for creation of a substitute mechanism. The
League's request stems from last year's decision by a majority of the
Volunteer Examiner Coordinators to incorporate what had previously
been an informal organization. The new group became the National
Conference of Volunteer Examiner Coordinators Inc, or NC-VEC.
The League's VEC and some other VECs chose not to participate in the
corporation. But Sumner emphasized that Bart Jahnke, KB9NM, who
manages the League's Volunteer Examiner Department, would continue to
participate with other coordinators on issues of common interest.
ARRL officials said they did not want to change the cooperative
relationship between the League and other VECs. The newly formed
conference, NC-VEC, later removed Jahnke from the question pool
committee, that's the mechanism through which VECs cooperate in
maintaining question pools for written ham radio examination elements.
In October, FCC's Wireless Telecommunications Bureau Deputy Chief
Ralph Haller confirmed that NC-VEC has no recognition in the
Communications Act or the FCC rules. Haller says the Commission views
each VEC individually. He says the Commission expects all VECs to be
able to participate in question pool activities. Then, in December
the Commission's Robert McNamara asked NC-VEC to immediately reinstate
the ARRL's VEC to a seat on its question pool committee. So far,
NC-VEC has refused. Don Tunstill, WB4HOK is president of NC-VEC. He
says if certain conditions are met, the League's Bart Jahnke would be

eligible for election to the committee when the conference meets in July.
The ARRL is now asking the FCC to declare that the NC-VEC's question pool committee is no longer the mechanism through which question pools for ham license exams are maintained. The League also wants the Commission issue a public notice to that effect, and it wants the FCC to terminate its agreement with any VEC that took part in the decision to exclude the League or any other VEC from cooperating in the maintenance of question pools. The League says NC-VEC's actions violate section 97-5-23 of the FCC Rules.
And the League is now inviting all VEC's to cooperate in creating a replacement Question Pool Committee, which would be open to all FCC recognized VECs. The League says NC-VEC's decision to exclude it caused study materials appropriate for prospective Technician class applicants to be omitted from syllabi the committee released February first. The League says present syllabi are unacceptable because study guides prepared for these exams won't include the missing material, and applicants won't be tested on it.
The ARRL says its exclusion also resulted in mistakes in the revised question pool for the extra class written exam the question pool committee released December 1st for use starting July 1st of this year.
The League's VEC claims it coordinates about two thirds of all amateur radio exams given nationwide. But don't look for the other third to simply walk away. If the FCC agrees to what the League wants, there's speculation this issue will wind up in court, and possibly for years to come.

(*****
ROMEO STEPANEKO BARRED FROM DXCC

One of the world's best known DXers has been barred for life from participating in the DXCC program. The ARRL Awards Committee says Romeo Stepaneko, who holds several DX calls including 3W3RR, violated operating ethics in documentation submitted for his 1992 to 1993 P5RS7 operation. This disqualification is based on DXCC rules 12 and 13. It means Stepanenko is not eligible to participate in the DXCC program in any manner. This also means that contacts made with any station or DXpedition operated by him from the time of this action will be disallowed. Stepaneko took the DX community by storm in the early 1990's with unexpected and sometimes unannounced operations from rare locations that were impossible for any other ham. He was the idol of the DX community until early last year when questions began to surface regarding the validity of some of his operations. We will have more DX later in our newscast.

(*****
11-METER OPERATOR FINED

Danny Lee Coffield of Lakewood, California, will have to pay a $2,000 fine levied by the FCC. The Commission's Compliance and

Information Bureau has affirmed Coffield's fine for operating an unlicensed transmitter on 27.7744 MHZ in 1993. According to the ARRL Letter, Coffield filed a Petition for Reconsideration after the FCC imposed the penalty.
Coffield claimed that FCC agents failed to properly identify themselves. And he said he had the right under FCC rules to remove the unauthorized frequencies from his transceiver instead of being fined. Coffield says that what the FCC really heard was his legal CB operation bleeding over to 27.7744 MHZ from an authorized CB channel. But the FCC found Coffield's assertions unpersuasive and without merit. The Commission says it had warned Coffield of the potential penalties for unlicensed operation prior to citing him September 29th, 1993. The FCC's order against Coffield was adopted February 7th. He now has 30 days to pay the penalty. Coffield's only option now is to take his case to federal court. That promises to be a lot more costly than paying the $2,000 fine.

(*****
NEW REPORT ON ELECTROMAGNETIC FIELDS AT HAM STATIONS

Amateur radio has a link to how the FCC will implement newly revised guidelines for human exposure to RF energy. The FCC has issued a new report on RF field measurements at ham stations. The Commission's Office of Engineering and Technology's technical report is called "Measurements of Environmental Electromagnetic Fields at Amateur Radio Stations." The report describes a joint measurement study of environmental radio-frequency fields conducted at nine ham stations in southern California in 1990. That study was conducted by the Commission and the Environmental Protection Agency. The Commission says the study selected amateur stations representing a variety of common antenna and equipment types. Measurements of electrical and magnetic field strength were taken in areas near antennas and equipment to determine typical and worst-case exposure levels of ham operators and others who might be nearby. The investigators used both broadband and narrowband instruments. The report says measurements at most of the stations did not exceed current RF protection guidelines for field strength and power density in accessible areas. According to the report, the highest readings in accessible areas "were generally associated with vehicle-mounted antennas." But the report says routine exposures from such antennas likely would be within safety guidelines when "duty factors" are taken into account. The report also says the use of maximum power levels and different facility configurations could result in higher exposure levels than those measured.
The report says the RF exposure precautionary measures cited in the ARRL Handbook for Radio Amateurs should be sufficient to prevent exposure of the amateur operator or other persons to RF levels exceeding protection guidelines. These measures include recommendations to:

1) Use only the minimum power necessary;

2) Minimize transmission time so that time-averaged
exposures are acceptable;

3) Identify high-field areas and restrict access to
them while transmitting

4) Mount antennas as high above ground as practical.

Here's information on how you can get a copy of this report. It's known as FCC/OET ASD-9601. It's available from the National Technical Information Service at 1-800-553-6847, purchase-order number PB-96-145-016. You can also get the report from International Transcription Service at area code (202) 857-3800. You can also get it as a compressed WordPerfect document for free from the FCC on the World Wide Web.

(*****
DOUBLE MURDER

A horrible discovery in Louisiana has authorities looking for the killer of a husband and wife amateur radio couple. Floyd Teetson, W5MUG, and his wife Winnie, WN5YTR, were found dead February 21st in the yard of their home near Heflin, Louisiana. Investigators are saying little about the case, but the Magnolia Letter cites sources saying the Teetsons were beaten and stabbed to death. The Teetsons were longtime Mississippi residents and were well known in that state's amateur radio community. Floyd Teetson was a retired employee of South Central Bell telephone company. There's no word on suspects and no arrests have been made.

(*****
ATLANTA OLYMPICS: NO HAM RADIO

If you're a ham and you plan on coming to Atlanta for the Olympic games, some friendly advice in advance. Leave your hand held radio at home. You won't be allowed inside if it's found on your person at the gate. This warning comes from Andrew Funk, KB7UV, a member of the Olympic Broadcast Frequency Coordination Committee. Andy tells Newsline he's very familiar with plans for RF management during the Olympic Games. He says all RF radiating devices at any venue connected to the games will be tightly controlled. This even goes for all broadcast-related RF gear. It will be required to pass a separate Olympic certification inspection, along with normal FCC certification.

"All broadcast related RF gear will be required to pass an Olympic certification and inspection in addition to that normally required by the FCC. And as amateur handi talkies are well known to be easily modified for wide band operation, they are going to be looked out for and not permitted in the venues. Now this is specifically the venues which is where the games, events are taking place." Funk

Andy says that this will unfortunately have an adverse impact on radio amateurs attending the games and who were hoping to operate from the events. Some may call this an unreasonable policy. It may or may

not be, but Andy suggests you avoid the hassle by NOT bringing your HT to the Atlanta games.

(*****
2 METER RANSOM

If you were watching CBS' 60 Minutes January 14th, you may have seen something of special interest to hams. One scene showed 2 meter FM ham gear being used by the family of an American businessman kidnaped in Columbia. That radio was being used to keep in touch with the kidnappers. The readout on the dial clearly showed a frequency of 147.200 MHZ. News reports say the kidnappers supplied the radio gear to negotiate ransom terms. The terms were eventually met and the man was released after nine months in captivity. The kidnappers have not been found.

(*****
NEW RAC SECRETARY

Some names in the news. First is Henry Tait, VE7FYU. Tait is the new secretary of Radio Amateurs of Canada. A British Columbia native, he replaces Kenneth Pulfer, VE3PU, who remains as RAC treasurer and a member of the national executive. Pulfer also continues as a member of the Amateur Radio Working Group negotiation with Industry Canada.

(*****
NEW ASTRO HAM

Also, NASA Astronaut Scott Parazynski, has earned his ham ticket and the call sign KC5RSY. Parazynski has not yet been assigned to a shuttle mission. Currently, the total number of hams who are NASA career astronauts or payload specialists stands at 41.

(*****
HAM APPOINTED PROFESSOR

Congratulations to Ted Rappaport, N9NB he has been promoted to full professor at Virginia Polytechnic Institute & State University. Rappaport established the Mobile and Portable Radio Research Group within the school's Department of Electrical Engineering. He's a specialist in wireless communication and has contributed to research into radio wave propagation within buildings and in local areas. Rappaport is a graduate of Purdue University, he joined Virginia Tech's faculty in 1988.

(*****
KX4V NEW ARRL LETTER EDITOR

Rick Lindquist, KX4V, has been selected to edit "Happenings" and "The ARRL Letter". This, following the departure from the League staff of Jim Cain, K1TN. Lindquist moves up from the post of assistant technical editor. He joined the League staff in September 1995.

(*****
DX - QSL

In DX, Karl M. Leite, PS7KM tells Newsline he's the new QSL manager for several Brazilian operations including Fernando de Noronha Island, PY0F, Trindade Island, PY0T, and Saint Peter & Saint Paul Rocks, PY0S to name but three.
Karl says that as of January 1997, all logs and QSL cards of these past DXpeditions will be destroyed. So, if you want confirmation of your contact, mail your QSL with sufficient postage to cover postal rates to Karl Leite in Brazil. His address is:

Karl Leite
Rua Estacio de Sa 1838
59054-580 NATAL
RN
Brasil, South America

Karl specifically says NOT to put any callsigns on the envelope, but rather, to simply address it to him.

(*****
BUBBA HAMFEST

There's Dayton and there's Friedrichstaffen and now there's Bubba. N3CND reports via packet radio that the BUBBA net plans to sponsor the 1st Annual Bubba Hamfest. It will be held at the Comer Fair Grounds on March 1st and 2nd. The Comer Fair Grounds are in Comer, Georgia. If you want to get in on the Bubba action, contact Ed Riddle, N4ALE.

(*****
WA6ITF BANQUET SPEAKER IN TULSA

Hams in the Tulsa, Oklahoma area will get a chance to meet and hear Newsline's executive producer Bill Pasternak, WA6ITF. It happens the weekend of March 23rd and 24th. Bill will be filling in for Roy Neal, K6DUE, as keynote banquet speaker at the 1996 Oklahoma Section Convention. The event takes place at the Maxwell Convention Center. Bill is also trying to set up a special Sunday screening of several of the ham radio films and video he and Roy Neal have produced since they first met back in the early 1970's. For ticket information, contact the:

Green County Hamfest
Box 470132
Tulsa, Oklahoma
74147

(*****
CONTEST LOG

Finally, this week, something from the contest corner. Larry Koolkin, VP9MZ, is contest manager for the Radio Society of Bermuda. He wants to remind you about an upcoming contest March 16th and 17th. The Society wants to encourage as much participation as possible. And here's one

exciting way they're doing it. Once again, the Bermuda Tourism Department will provide free roundtrip transportation to Bermuda for the worldwide contest winner. The trip takes place during the annual Radio Week event in October which includes the awards banquet. Accommodations will be provided at the beautiful Palmetto Bay Hotel. A rough job, but someone will have to do it...

(*****

And for this week, that's all from the Amateur Radio Newsline. If you would like to contact us, our address is:

Newsline
P.O.Box 660937
Arcadia, CA
91066

For now, with Bill Pasternak, WA6ITF at our editor's desk, we at Newsline say 73 and we thank you for listening.

The following is a QST

The ARRL tells the FCC that the VEC question pool system is broken

and it wants it fixed -- now! Also, the FCC tells an out of band CBer
to pay up and the DXCC bans a famous DXer for life. Find out who on
Newsline report number 968 coming your way right now!

(*****
ARRL ASKS FCC FOR NEW QUESTION POOL COMMITTEE

The FCC is being asked to step in the middle of a dispute
involving
amateur radio license examinations. It's an issue that has some
asking whether the VEC question pool is broken or whether the League
is trying to become the nation's only ham radio exam coordinator.
David Sumner, K1ZZ is the League's Executive Vice President. He says
the mechanism to maintain question pools for amateur license tests has
broken down and no longer operates as Commission rules require.
That's what Sumner told FCC Private Wireless Division Chief Robert
McNamara February 23rd.
The League also wants the Commission to issue a public notice to
help clear the way for creation of a substitute mechanism. The
League's request stems from last year's decision by a majority of the
Volunteer Examiner Coordinators to incorporate what had previously
been an informal organization. The new group became the National
Conference of Volunteer Examiner Coordinators Inc, or NC-VEC.
The League's VEC and some other VECs chose not to participate in
the
corporation. But Sumner emphasized that Bart Jahnke, KB9NM, who
manages the League's Volunteer Examiner Department, would continue to
participate with other coordinators on issues of common interest.
ARRL officials said they did not want to change the cooperative
relationship between the League and other VECs. The newly formed
conference, NC-VEC, later removed Jahnke from the question pool
committee, that's the mechanism through which VECs cooperate in
maintaining question pools for written ham radio examination elements.
In October, FCC's Wireless Telecommunications Bureau Deputy Chief
Ralph Haller confirmed that NC-VEC has no recognition in the
Communications Act or the FCC rules. Haller says the Commission views
each VEC individually. He says the Commission expects all VECs to be
able to participate in question pool activities. Then, in December
the Commission's Robert McNamara asked NC-VEC to immediately reinstate
the ARRL's VEC to a seat on its question pool committee. So far,

NC-VEC has refused. Don Tunstill, WB4HOK is president of NC-VEC. He says if certain conditions are met, the League's Bart Jahnke would be eligible for election to the committee when the conference meets in July.
The ARRL is now asking the FCC to declare that the NC-VEC's question
pool committee is no longer the mechanism through which question pools for ham license exams are maintained. The League also wants the Commission issue a public notice to that effect, and it wants the FCC to terminate its agreement with any VEC that took part in the decision to exclude the League or any other VEC from cooperating in the maintenance of question pools. The League says NC-VEC's actions violate section 97-5-23 of the FCC Rules.
And the League is now inviting all VEC's to cooperate in creating a

replacement Question Pool Committee, which would be open to all FCC recognized VECs. The League says NC-VEC's decision to exclude it caused study materials appropriate for prospective Technician class applicants to be omitted from syllabi the committee released February first. The League says present syllabi are unacceptable because study guides prepared for these exams won't include the missing material, and applicants won't be tested on it.
The ARRL says its exclusion also resulted in mistakes in the revised
question pool for the extra class written exam the question pool committee released December 1st for use starting July 1st of this year.
The League's VEC claims it coordinates about two thirds of all amateur radio exams given nationwide. But don't look for the other third to simply walk away. If the FCC agrees to what the League wants, there's speculation this issue will wind up in court, and possibly for years to come.

(*****
ROMEO STEPANEKO BARRED FROM DXCC

One of the world's best known DXers has been barred for life from participating in the DXCC program. The ARRL Awards Committee says Romeo Stepaneko, who holds several DX calls including 3W3RR, violated operating ethics in documentation submitted for his 1992 to 1993 P5RS7 operation. This disqualification is based on DXCC rules 12 and 13. It means Stepanenko is not eligible to participate in the DXCC program in any manner. This also means that contacts made with any station or DXpedition operated by him from the time of this action will be disallowed. Stepaneko took the DX community by storm in the early 1990's with unexpected and sometimes unannounced operations from rare locations that were impossible for any other ham. He was the idol of the DX community until early last year when questions began to surface regarding the validity of some of his operations. We will have more DX later in our newscast.

(*****
11-METER OPERATOR FINED

Danny Lee Coffield of Lakewood, California, will have to pay a $2,000 fine levied by the FCC. The Commission's Compliance and Information Bureau has affirmed Coffield's fine for operating an unlicensed transmitter on 27.7744 MHZ in 1993. According to the ARRL Letter, Coffield filed a Petition for Reconsideration after the FCC imposed the penalty.
Coffield claimed that FCC agents failed to properly identify themselves. And he said he had the right under FCC rules to remove the unauthorized frequencies from his transceiver instead of being fined. Coffield says that what the FCC really heard was his legal CB operation bleeding over to 27.7744 MHZ from an authorized CB channel. But the FCC found Coffield's assertions unpersuasive and without merit. The Commission says it had warned Coffield of the potential penalties for unlicensed operation prior to citing him September 29th, 1993. The FCC's order against Coffield was adopted February 7th. He now has 30 days to pay the penalty. Coffield's only option now is to take his case to federal court. That promises to be a lot more costly than paying the $2,000 fine.

(*****
NEW REPORT ON ELECTROMAGNETIC FIELDS AT HAM STATIONS

Amateur radio has a link to how the FCC will implement newly revised
guidelines for human exposure to RF energy. The FCC has issued a new report on RF field measurements at ham stations. The Commission's Office of Engineering and Technology's technical report is called "Measurements of Environmental Electromagnetic Fields at Amateur Radio Stations." The report describes a joint measurement study of environmental radio-frequency fields conducted at nine ham stations in southern California in 1990. That study was conducted by the Commission and the Environmental Protection Agency. The Commission says the study selected amateur stations representing a variety of common antenna and equipment types. Measurements of electrical and magnetic field strength were taken in areas near antennas and equipment to determine typical and worst-case exposure levels of ham operators and others who might be nearby. The investigators used both broadband and narrowband instruments. The report says measurements at most of the stations did not exceed current RF protection guidelines for field strength and power density in accessible areas. According to the report, the highest readings in accessible areas "were generally associated with vehicle-mounted antennas." But the report says routine exposures from such antennas likely would be within safety guidelines when "duty factors" are taken into account. The report also says the use of maximum power levels and different facility configurations could result in higher exposure levels than those measured.
The report says the RF exposure precautionary measures cited in the

ARRL Handbook for Radio Amateurs should be sufficient to prevent exposure of the amateur operator or other persons to RF levels exceeding protection guidelines. These measures include recommendations to:

1) Use only the minimum power necessary;

2) Minimize transmission time so that time-averaged exposures are acceptable;

3) Identify high-field areas and restrict access to them while transmitting

4) Mount antennas as high above ground as practical.

Here's information on how you can get a copy of this report. It's known as FCC/OET ASD-9601. It's available from the National Technical Information Service at 1-800-553-6847, purchase-order number PB-96-145-016. You can also get the report from International Transcription Service at area code (202) 857-3800. You can also get it as a compressed WordPerfect document for free from the FCC on the World Wide Web.

(*****
DOUBLE MURDER

A horrible discovery in Louisiana has authorities looking for the killer of a husband and wife amateur radio couple. Floyd Teetson, W5MUG, and his wife Winnie, WN5YTR, were found dead February 21st in the yard of their home near Heflin, Louisiana. Investigators are saying little about the case, but the Magnolia Letter cites sources saying the Teetsons were beaten and stabbed to death. The Teetsons were longtime Mississippi residents and were well known in that state's amateur radio community. Floyd Teetson was a retired employee of South Central Bell telephone company. There's no word on suspects and no arrests have been made.

(*****
ATLANTA OLYMPICS: NO HAM RADIO

If you're a ham and you plan on coming to Atlanta for the Olympic games, some friendly advice in advance. Leave your hand held radio at home. You won't be allowed inside if it's found on your person at the gate. This warning comes from Andrew Funk, KB7UV, a member of the Olympic Broadcast Frequency Coordination Committee. Andy tells Newsline he's very familiar with plans for RF management during the Olympic Games. He says all RF radiating devices at any venue connected to the games will be tightly controlled. This even goes for all broadcast-related RF gear. It will be required to pass a separate Olympic certification inspection, along with normal FCC certification.

"All broadcast related RF gear will be required to pass an Olympic certification and inspection in addition to that normally required by the FCC. And as amateur handi talkies are well known to be easily

modified for wide band operation, they are going to be looked out for and not permitted in the venues. Now this is specifically the venues which is where the games, events are taking place." Funk

Andy says that this will unfortunately have an adverse impact on radio amateurs attending the games and who were hoping to operate from the events. Some may call this an unreasonable policy. It may or may not be, but Andy suggests you avoid the hassle by NOT bringing your HT to the Atlanta games.

(*****
2 METER RANSOM

If you were watching CBS' 60 Minutes January 14th, you may have seen
something of special interest to hams. One scene showed 2 meter FM ham gear being used by the family of an American businessman kidnaped in Columbia. That radio was being used to keep in touch with the kidnappers. The readout on the dial clearly showed a frequency of 147.200 MHZ. News reports say the kidnappers supplied the radio gear to negotiate ransom terms. The terms were eventually met and the man was released after nine months in captivity. The kidnappers have not been found.

(*****
NEW RAC SECRETARY

Some names in the news. First is Henry Tait, VE7FYU. Tait is the new secretary of Radio Amateurs of Canada. A British Columbia native, he replaces Kenneth Pulfer, VE3PU, who remains as RAC treasurer and a member of the national executive. Pulfer also continues as a member of the Amateur Radio Working Group negotiation with Industry Canada.

(*****
NEW ASTRO HAM

Also, NASA Astronaut Scott Parazynski, has earned his ham ticket and
the call sign KC5RSY. Parazynski has not yet been assigned to a shuttle mission. Currently, the total number of hams who are NASA career astronauts or payload specialists stands at 41.

(*****
HAM APPOINTED PROFESSOR

Congratulations to Ted Rappaport, N9NB he has been promoted to full

professor at Virginia Polytechnic Institute & State University. Rappaport established the Mobile and Portable Radio Research Group within the school's Department of Electrical Engineering. He's a specialist in wireless communication and has contributed to research into radio wave propagation within buildings and in local areas. Rappaport is a graduate of Purdue University, he joined Virginia

Tech's faculty in 1988.

(*****
KX4V NEW ARRL LETTER EDITOR

Rick Lindquist, KX4V, has been selected to edit "Happenings" and
"The ARRL Letter". This, following the departure from the League
staff of Jim Cain, K1TN. Lindquist moves up from the post of
assistant technical editor. He joined the League staff in September
1995.

(*****
DX - QSL

In DX, Karl M. Leite, PS7KM tells Newsline he's the new QSL manager

for several Brazilian operations including Fernando de Noronha Island,
PY0F, Trindade Island, PY0T, and Saint Peter & Saint Paul Rocks, PY0S
to name but three.
Karl says that as of January 1997, all logs and QSL cards of these
past DXpeditions will be destroyed. So, if you want confirmation of
your contact, mail your QSL with sufficient postage to cover postal
rates to Karl Leite in Brazil. His address is:

Karl Leite
Rua Estacio de Sa 1838
59054-580 NATAL
RN
Brasil, South America

Karl specifically says NOT to put any callsigns on the envelope,
but
rather, to simply address it to him.

(*****
BUBBA HAMFEST

There's Dayton and there's Friedrichstaffen and now there's Bubba.

N3CND reports via packet radio that the BUBBA net plans to sponsor the
1st Annual Bubba Hamfest. It will be held at the Comer Fair Grounds
on March 1st and 2nd. The Comer Fair Grounds are in Comer, Georgia.
If you want to get in on the Bubba action, contact Ed Riddle, N4ALE.

(*****
WA6ITF BANQUET SPEAKER IN TULSA

Hams in the Tulsa, Oklahoma area will get a chance to meet and
hear
Newsline's executive producer Bill Pasternak, WA6ITF. It happens the
weekend of March 23rd and 24th. Bill will be filling in for Roy Neal,
K6DUE, as keynote banquet speaker at the 1996 Oklahoma Section
Convention. The event takes place at the Maxwell Convention Center.
Bill is also trying to set up a special Sunday screening of several of

the ham radio films and video he and Roy Neal have produced since they first met back in the early 1970's. For ticket information, contact the:

Green County Hamfest
Box 470132
Tulsa, Oklahoma
74147

(*****
CONTEST LOG

Finally, this week, something from the contest corner. Larry Koolkin,
VP9MZ, is contest manager for the Radio Society of Bermuda. He wants to remind you about an upcoming contest March 16th and 17th. The Society wants to encourage as much participation as possible. And here's one exciting way they're doing it. Once again, the Bermuda Tourism Department will provide free roundtrip transportation to Bermuda for the worldwide contest winner. The trip takes place during the annual Radio Week event in October which includes the awards banquet. Accommodations will be provided at the beautiful Palmetto Bay Hotel. A rough job, but someone will have to do it...

(*****

And for this week, that's all from the Amateur Radio Newsline. If you would like to contact us, our address is:

Newsline
P.O.Box 660937
Arcadia, CA
91066

For now, with Bill Pasternak, WA6ITF at our editor's desk, we at Newsline say 73 and we thank you for listening.

3150. Call Letters?

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-04 00:00:00 UTC
From: afm@nrgsoft.com
Message-ID: <afm-0403961216120001@work1.jdpub.com>
Source record: 229871

Is there any place on the internet where I can get a call letter database?
(for free would be nice!)

Regards,
Andy
knasinskia@jdpub.com

Hi Andy.

Yes there are quite a few. I think the best is University of Little Rocks
Ham Club. Their callbase is updated daily from the FCC and supports nice
search strings. You can telnet to "callsign.ualr.edu 2000" or go to their
homepage at "www.uarl.edu" (they have an address specificaly for the
callsign server, but I dont have it in front of me, but you will be able
to find it fine from here)

Hope this helps...take care.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
~~~~~~

that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

Lance Halle KC7FVX

For amateur radio related information, send a message to:
ham-server@grafex.sbay.org
and put "HELP" and/or "GET /HAMRADIO/INDEX.TXT" in the body.

HAM-server is now on a 486 with nearly 70 MB of data. Besides DOS,
there are some UNIX, Mac, and OS/2 files.

Most files have been taken from the various ftp-servers world-wide.
However, there are many programs that have been donated by HAM-server
users.

Submissions welcome. Send to incoming@grafex.sbay.org.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1,

1995)

The QRP-L mailing list is intended to be a relatively noise-free
environment for discussion of any subjects relating to low-power
amateur radio operation. Example topics: portable operation, equipment
design and construction, solar and battery power, QRPp, contesting,
kit building.

Jack G.F. Hill W4PPT

Jack, W4PPT/M (75M SSB 2-letter WAS #1657/#1789 -- both from the mobile! ;^)

root@jackatak.ThePorch.com - "Plus ca change, plus c'est la meme chose"

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if

there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for

MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

Robert A. Kile KG7D

midnight@accessnv.com

A Current list of Dealers and Manufacturers of Amateur Radio Equipment in North America is now available on HR Showcase Amateur Radio WWW. The URL is:

http://www.accessnv.com/hrshow/

The listing will be updated as more come on line. Enjoy!

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available
archives are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic directory.

If you want to access the BBS via Telnet, all you have to do is access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun,

NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

INFORMATION ABOUT FOREIGNERS OPERATING IN JAPAN

- M -

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Antenen Pascal HB9IIB

AUTHOR, SWISSLOG HAM RADIO LOG PROGRAM

http://www.worldcom.ch/business/swisslog/swisslog.htm

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Tony Reeves AB6GA

tony@toners.com

Prescott, AZ

* Novice training, local VE for Novice-Tech tests
* General questions

I also operate a 24-hour landline BBS for Ham and General Interest:

+1 520 445-8472

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds.stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

(Spinal Tap)
- ---

Having recently discovered the joys of Perl and CGI on the WWW, I
decided to get into the swing of it by coding a WWW page where one can
take practice Amateur Radio Exams. The page is now complete and has
all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by
subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one
can get some idea of the relative success rate for each Exam and
subelement. This may provide some interesting information as time goes
by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of
bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========

This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

Bob Wier

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

You need to learn code because international law sez you do!!! Until that changes, this is rapidly
becoming a very boring topic.

When the date reads 1999 and the ITU meets again, lets discuss this somemore. Until
then lets talk about pinning coaxial cables and ripping down towers...you know..
destructive things that have been advocated by some here

Paul,

That's a very blatent claim you make. This patent went through with only one need for clarification from the PTO. Obviously know one else sought such a patent which is evidence by the PTO issuing me patent # 5457342.

Those companies you mention have devices that are similar with respect to cooling only if you care to follow the patents mentioned on my abstract. However, NONE have developed the device I have NOR do they have a patent on such a device. As such, I am the sole owner to pursue development of this product or companies under infringement.

* = New data. T index may have changed.
^ = IPS predicted T index

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

==========

2. FLARES AND SHORT-WAVE FADEOUTS - NONE

2.1 Comments on Solar Activity.
Solar activity was very low during the month of February.

The monthly sunspot number for February was 4.4 which is
the lowest value observed this far in the decline of the
solar cycle. The first half of the month was particularly
quiet with a sequence of 12 days in a row when the IPS
Solar Observatory at Culgoora saw no solar regions with

spots.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
11 Feb 96: mostly unsettled, with active periods 00-03UT and 09-12UT
24 Feb 96: mostly unsettled with one active period
25 Feb 96: unsettled to minor storm between 12-18UT

Geomagnetic activity this month was mostly quiet to unsettled, with increased activity observed during intervals 11 February and 24-25 February. The mild disturbance observed during the interval 24-25 February may be the start of a new recurrent pattern of geomagnetic activity.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
11 Feb 96: depressed 15% southern region
15 Feb 96: depressed 15-30% southern and northern region
24 Feb 96: depressed 15% southern region
25 Feb 96: depressed 15% during daylight hours
27 Feb 96: depressed 15-30% during daylight hours northern region

Two periods of ionospheric depression were observed this month, the first occuring near the middle of the month, the second towards the end of the month. The most significant ionospheric depression was observed on 15 February.

==========

Message-ID: <mwhite-0403961418020001@m14494-mac.mitre.org>
Source record: 229881

Bruce Miller wrote:

> You know, this is the kind of sleazy, sensationalist, dishonest
> reporting ... that gets my goat about the media.

The media does this kind of thing because there's a market for it. If people didn't watch, they wouldn't do it. It's a reflection of our culture, and that's a pity.

Mike, N4PDY.

OK, Hans...let me ask this question again, since I haven't seen an answer
yet: Why did ARRL refuse to join NCVEC, Inc.?

I'd like to know this, regardless of the issues involved in the QPC - it
does appear to me that NCVEC, Inc. cannot declare itself the QPC
unilaterally.

I bought a TA-33 a few weeks back that had no instructions.
So I'm looking for someone how has a TA-33 and would be willing
to copy the instructions and send them to me? I'd appreciate
your help. Tim WB8BCO tcook1@ohiou.edu Thanks

3164. Re: 'cell driving' illegal

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-04 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4hg8bh$pr6@newsbf02.news.aol.com>
Source record: 229885

It seems to me that deaf persons are allowed to drive.

I have questioned law-enforcement types in 2 far-apart jurisdictions where I have lived, and one answer was "no restriction" on headsets, while the other was "one ear must be uncovered". Therefore, I think that it is safe to assume that the law varies from one state to the next.

Just a reminder on a topic brought up earlier in this thread - regardless of local or state laws regarding scanners in vehicles, the FCC has ruled that licensed amateur radio operators are exempt from any such laws.

73 de Jim KD1YV

For your GeeWizz reading pleasure...

California has an earphone law as well..older than the "walkman".

California drivers ARE permitted to cover one ear with a plug or headset,
but not both ears. There are a number of exceptions specific to
construction, emergency and certain commercial vehicles and driving
conditions.

Headset wearing hams (and walkman users) in California should also note
that the prohibition on covering both ears applies to bicyclists as well
as motorists.

I would accept any proof, regardless of its basis. So far, there has not been one iota presented.

For the "counter-proofs", let us examine that there are many countries now that have no-code amateurs who are limited to 30 MHz and above. I doubt that their lack of knowledge of CW makes them illiterate. For that matter, I would suggest that in many of the countries, particularly in Europe, their skills and development far exceed ours, much of it due to smaller allocations and a dearth of repeaters in comparison to the North American experience. Another is the abandonment of Morse code by all other users of the radio frequency spectrum - civilian, military, aeronautical and maritime.

I have give two proofs here. Instead of griping about to what standard, give examples that support your assertions.

>> It may be an article of faith, but that does not make it true.
>>You can't prove this assertion because there is none.
>

>
>How can you prove there is none? Seems like you may be doing the
>very thing you accuse me of?

Your failure to even provide any examples to assert your theories speak volumes. I am only asking that you prove your assertions because they are not evident. In contradiction, I have shown two examples that are proofs in contradiction to your earlier post.

>
>
>You know as well as I, that the truth or falsity of an idea is independant
>of it's popularity.

Yes, but what has this got to do with the argument at hand? My concern is not with popularity, but with relevancy.

>I believe that your statement is a caracature of my
>position.

I believe that I was re-stating your assertion. If my restating was incorrect, I would be please to know how I was wrong.

>The purpose of my position is (as I mention elsewhere) to make
>sure that should someone find themselves in a crisis and only have
>at their disposal the means to use cw, that their cry for help will
>go unanswered because the other users of the spectrum were unwilling
>and unable to understand them.
>

So, let's get this straight. The bottom line now is that CW testing is required so that if the amateur is in an emergency sitiuation, he is capable of using that mode of communication if in a crisis and that is the only mode available.

I think this justification should be examined. Why would amateurs wish use this as a justification, where emergency communications is not a direct raison d'etre for the amateur service, yet in the martime mobile service, where safety of life is paramount, have pretty well abandoned the use of Morse code, and will have done so in 35 months? It seems odd to me that the maritime mobile service has a much greater stake in providing search and rescue, and these are the real professionals in radiocommunications, yet we lowly amateur insist that Morse code communications is vital in crises? For that matter, even if we amateur are not directly involved in the emergency, why has the use of CW atrophied over the years, mostly supplanted by voice nets and digital communications? So if Morse code is so vital and necessary, why is it being abandoned by everybody? Would amateurs able to justify to the public the expense and resources needed to spend on learning Morse code on the infitismally remote chance that we might need it? And what of the VHF-only amateurs? Does this mean that they are condemned?

The FAA states that Pagers, Cellular Phones, Radios including scanners and Ham, C.B., general etc. are not allowed to be operated or in use on board an aircraft without the approval of the captain of the aircraft. This is because that use of this can interfere with the communication, navigational and instrumental devices in the cockpit.

Basically...just don't touch the radio on the plane. Also it maybe wise to take of the battery and antenna to get through security.

What I am wondering is what this has anything to do with amateur radio antennas, homebrew, space, etc.? The point is that this, and the preceding posts were made to the amateur radio news groups.

Cooling of microprocessors, and your grandstanding of being awarded a patent are of no interest to me or in any way pertinent to my interest in amateur radio. And that is why the newsgroup(s) have those titles.

If you are looking for invetors, get a clue and do it somewhere else.

If you are simply so proud of yourself for being awarded a patent for what appears to be anothers work, then HIP HIP HOORAY for you! Now grow up and go away.

oh, i dunno if they should do away with Morse...but there is a question about if we need 3 different speed exams. truly proficient operators breeze past 20. they would do that anyway. so maybe 5 is all that's required.

other times people say we need a test that's skill based rather than knowledge based for the "pinky" crowd as opposed to the "brain" crowd. since all exams have a written element, i tend to think this argument is flawed.

Bell South is one of the big shot sponsors. you can bet your Bell South cell phone will not have any problems with security at the Olympics (...from tennesee to florida... they say that in the local Bell South ads touting their cell radiotelephone networks (made by Hughes and Alcatel...wonder how much that little by line cost 'em?)...i wonder if there will be anything in ATL to see...)

i could be wrong, but i'm betting with the sponsors...wonder what they'll do to the passersby who don't want to have anything to do with the Olympics?

I have done the keypad mod for extended RX, but it doesn't recieve much. I read on an FTP site that this it the way to do it. However, at a local repair shop, I was able to view a mod book for Icom radios. It cites the addition of D-23 (MA132WK) as the RF expansion mod. Has anyone tried this? Is it possible that Icom has stopped including this in the W21AT radios? I know the keypad mod works on the earlier models..... Perhaps they no longer include this diode. In the book, it said to do the keypad mod only AFTER inserting the diode/ So, maybe mine TUNES out of band, but requires a diode to actually RECIEVE out of band.. Any experience with this?

Nate, KB9LSX

Why do we need to defend our hobby, using arguments like
"public services", etc. YES, Ham Radio can be useful in emergency,
but it is NOT about emergencies!

Why golfers do not try to defend their game, arguing that the
golf ball can be used as an arm (see "Coneheads"). They play
golf because they love it! The same about any other hobby.
You are lucky, if you can find secondary use of the hobby, but
even if you can't... so what?!

I think that it is nothing wrong about preserving Whimbledon
corts from amateurs, who started to play tennis two weeks ago.
And if you DO NOT WANT to learn, how to serve, do not complain,
if you will never join the Grand Slam tournament. The same with
code. YES, I do not see any SERIOUS practical use of it. But
for us it is a part of the hobby, and without code a ham is like
a tennis player without serice. Do we need any other arguments?

I personally enjoy working CW. Unlike many of my friends, the
code for me was a DIFFICULT task, and it takes me several years
to practice it, until I became able to work seriously. But I
am proud, that in one day, I passed all my US exams, from novice
to extra, including code, of course (my case is unusual, comparing
to others, because I had Russian Extra class license for a long
time... but in Russia it was possible, having good friends, get
a license without any exams).

So let's use code on HF, as a part of the rules of the game!

of course. it would be fraud for NCVEC to proceed otherwise, but the ARRL was
making their position point so there'd be a paper trail should the question come up.
there's a valid question of legitimacy if the nation's amateur radio question pool
makers don't include the largest test giving organization.

you're not giving us the whole story. hank's probably not got the whole story.
it's probably not possible for an accurate accounting to be presented at this
time now that the ARRL's gone to the FCC over this.

hank does raise some questions wrt the ncvec's standing with the commission.
it does sound like from the time line that there's probably some cart before the horse problems (not necessarily unsolvable).

so this morning you open your door and find a crew from 20/20 on your doorstep and they want to know if you've stopped beating your wife. you can't win when the journalist has entered "assault mode". they got their interview with the complainers and now the project is the same as they'd use against the dishonest business...you aren't going to be prepared to discuss anything with them and they'll do anything to your answers to make you look like the bad guy (editing 101...excellent example of that on The Simpsons a while back where they took an OK answer by Homer and turned him into a drooling fool bad guy using his responses...).

the tv station wants blood for the ratings monster and it IS sweeps right now..

Having too much time on my hands, I went and looked at your patent.
The first part of the patent describes the exact CCD cooling method
used for years by Santa Barbara Instruments (and others) for cooling
CCDs. Your novel claim seems to be an IC cooler that is retrofitted to
an existing, uncooled IC.

I have a Kenwood TM-741A with UT-28s 10 meter band unit added. All faqs I have seen state that cutting the green wire and removing R54 & R55 will enable Tx from 26MHz to 45 MHz, and Rx from 18 MHz to 54 MHz. I bought this radio with this mod and have checked and verified it. However, when I try to Tx in the 33MHz range my output is only about 1.5 watts. It will not receive at all here. I am a vol. firefighter and my dept. as well as almost all other VFD's around this area use the 33 MHz range. My Rx & Tx in the 2 meter and 440 mods check out fine. (I'm using 155MHz & 450 MHz ranges.). Can anyone offer any help? Thanks.

I need some 12-pin sockets for compactrons and don't seem to find them anywhere. One local supplier has some old PC mount units, but I am looking for the chassis-mount ones that will drop into 1" diameter holes, if at all possible. I gather these aren't in production any longer, but does anyone have a handful of them in a basement somewhere or know some supplier with old stock around?

Thank you Mr. moderator. Presumably only your "drivel" is appropriate for posting on .policy? The debate will continue, no matter how much you tire of it, until change is effected. It would be nice if these efforts could take a contructive turn though.

One confounding problem is the fact that people here prefer to disagree with others, rather than seek those issues upon which we agree. (Makes for more sensational posts, I think.) If we could agree, for example, that the current testing methods are less than optimum, and could achieve consensus on the basic prerequisites for a responsible/knowlegable amateur operator, a testing scheme could be devised to insure the minimum qualifications of an applicant. But such a test should test ONLY for requisite skills and
knowledge. (Lets face it, it is unrealistic to expect a newbie to demonstrate the expertise of a seasoned operator prior his being granted a license.) A constructive discussion can only be conducted in an atmosphere abscent of hostility, prejudice, and resentment. Unfortunately there exists an ample amount of all the above.

Morse testing IS an appropriate topic for discussion on this group. Agreed, it is not the only place for it to take place, but it is a good place for it. It's safe to assume that some of this is noticed by ARRL directors, and perhaps even certain FCC officials. Another tack is of course direct correspondence with those individuals. I suspect that very few congressmen give a damn one way or the other about the problems of amateur radio however.

The sequence of events was detail in my posting of the Letter from the President of NCVEC, Inc to the President of the ARRL. If the ARRL had jusst declined to name a board representative and not invoked the prohibition, we would not be talking about this. One other short point the vote for imncorporation of NCVEC was 14 to 2 in favor keep this in mind when the ARRL is talking about other VECs being on "their" side.

I'm trying to receive an out-of-state but strong signal AM radio station (WSM-AM in TN to be exact) but have a hard time getting it. I can do OK from my car (with a fair amount of fuzz but at least recognizable, especially at night), but can hardly get it in the house. I currently have a loop antenna that came with the stereo attached for AM signals and a fancy-looking FM antenna that I bought (which helps improve FM signals) for the FM. Please, in your E-MAIL, tell me how to improve my reception in detail but not too technical. Also, how would I do the same for distant FM stations? Thanx to all who helps in advance!

Richard Eyre-Eagles (rec@goodguy) wrote:

: In summary, there would be 3 license classes that all new licensees and
: upgrades would go to:

: - CLASS 3 [elements 2, 3(a) and 3(b)] Everything above 50 MHz

: - CLASS 2 [elements 1(a), 2, 3(a) and (b)] Frequency privleges
: equivlent to General Class.

: - CLASS 1 [element 1(b) and all writtens] Extra class privs.

I would agree, except I would keep the 20 wpm requirement for the Extra.
Also, I would like to see the top two licenses have even more difficult
theory.

As an example, one can get all the questions in the pool correct for the
subelement dealing with Smith charts on the Extra exam, without even knowing
how to use the Smith chart. It would be nice to see examples of solving
cetain types of problems as study material, but the tests requiring the
applicant to actually demonstrate his competence by solving such problems.

No, I do not think that one should have to be an engineer or ET to pass
these exams, and no, I am not for some exclusive "club" at the top. But
those last two steps on the ladder should represent quite an accomplishment.
It is easy enough to get on the air now, with the no-code license, but
memorizing the question pool for Advanced or Extra seems wrong to me. It
might surprise you to know how many OT Extras have advocated memorizing or
other shortcuts to me, as I prepare to take the Extra.

3198. 80 METER QRP BEACON THIS WEEKEND ***

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-06 00:00:00 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1996Mar6.044812.22368@VFL.Paramax.COM>
Source record: 229819

----- 80 METER QRP BEACON -- March 8-10 1996 ------

I am going to run a experimental QRP propagation beacon on 80 meters over the weekend of March 8-10. The beacon will run for the entire weekend at various power levels (see below).

START TIME: No later than 9:00 PM EST Friday Mar 8 (May be as early as 7:00 PM EST. Depends on when I get home from work) The beacon will be on continuously through the entire weekend including daytime hours. I don't know how productive it will be during the daytime but that is part of the point of all this -- to find out. The 1-2 hour period before, at, and shortly after my and your local sunset (and sunrise) should be most interesting.

END TIME : No earlier than 8:00 PM EST Sunday Mar 10

LOCATION : Newtown Square PA FM29hx (about 15 miles west of Philadelphia)

FREQUENCY : 3557 KHz

OUTPUT POWER : Power will cycle though 6 different levels, 2 minutes at each level, resulting in 5 complete cycles per hour.

------- minutes past hour ------- power level

:00-02 :12-14 :24-26 :36-38 :48-50 2 W
:02-04 :14-16 :26-28 :38-40 :50-52 200 mW
:04-06 :16-18 :28-30 :40-42 :52-54 20 mW
:06-08 :18-20 :30-32 :42-44 :54-56 2 mW
:08-10 :20-22 :32-34 :44-46 :56-58 630 uW
:10-12 :22-24 :34-36 :46-48 :58-60 200 uW

Note the 630 uW level inserted between 2 mW and 200 uW represents the 5 dB mid-point between the two levels.

These times should hold pretty close.. within a few seconds, however, keep in mind that the power level will not change to the next level until the previous message has finished sending.

MESSAGE:

VVV VVV VVV xx MW <4_letter_code_word> DE WA3NNA/B QRP

Sent at aprox 15 WPM. Unique codeword for each power level.

ANTENNA : Full size inverted-vee center @ 65' running east/west.

One way or another, certificates acknowledging the lowest power level at which you correctly copy the codeword will be available. Details TBD.

80 has been pretty quiet here the past few days. Hope it stays that
way through the weekend.

I will be monitoring e-mail on and off through the weekend for reports/comments.
A summary of reports received will be posted around the middle of the following
week. Please include time, signal report, and codewords with your reports.

Good luck,

73,

Pete Rossi - WA3NNA

3201. Question Re: Yaesu FT-727R and packet radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-06 00:00:00 UTC
From: "COOPER, PAUL WINFIEL" <PWCOOPER@MUSIC.CC.UGA.EDU>
Message-ID: <06MAR96.01578505.0032@UGA.CC.UGA.EDU>
Source record: 229822
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.packet

I have a friend that wants to find a previous article in 73 Magazine
about an inexpensive TNC for the Yaesu FT-727R, as well as supporting
CAT software...

Any help would be greatly appreciated... thank you.

Paul
p.s. - please e-mail DIRECTLY to this address... thanks.

3202. Re: My idea for restructuring the licensing system..and keeping the code

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-06 00:00:00 UTC
From: bmicales@facstaff.wisc.edu
Message-ID: <4hisra$kgg@news.doit.wisc.edu>
Source record: 229823
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In article <4hgb3b$3tt@news1.goodnet.com>, rec@goodguy says...

>In summary, there would be 3 license classes that all new licensees and
>upgrades would go to:
>
> - CLASS 3 [elements 2, 3(a) and 3(b)] Everything above 50 MHz
>
> - CLASS 2 [elements 1(a), 2, 3(a) and (b)] Frequency privleges
> equivlent to General Class.
>
Would you be willing to "grandfather" the Tech PLUS (received before March
21, 1987) to the CLASS 2 license? These Tech PLUS (prior to 3/21/87) have
the code, theory, and regulations elements.

QSL route information:
HAM2VB to HA2VB. J28JY via F6BFH. 4L8A via OZ1HPS. OD5PL via HB9CRV.
VK9XY and VK9CR via DK7NP. VP2EN via AA4NC. 9K2ZC via KC4ELO.
YI1HK via SM5DBU. A22BW via DK3KD. KE6GEM/5N6 via K4ZLE.
A41KD to Saif. Box 99, Mina Al Fahal 116, Oman. SL3ZYL via SM3KOR.
TA2II to Ahmet. P.O. Box 27, 81031 Istanbul, Turkey.

QSL routes confirmed:
Belau (KC6). KC6VW 25/9/94 direct via JA6VZB.
South Shetland Isl. (VP8). VP8CQS direct via SP2GOW.

Notes of interest:

The Gambia (C5). A group of German operators plan to be active near Banjul, March 4-18. Two separate stations and plans to operate during the BARTG RTTY contest, March 16-17.

Tonga (A3). Paul, KK6H will use the call A35RK with RTTY planned from February 20 until March 20. QSL via W7TSO.

Hungary (HA) are using the additional prefix letter "M" to celebrate 1100 years since foundation of the state. (HAM2VB).

Belorus (EU-EW). The special call EV10D marks 10 years since the Chernobyl Nuclear Power Station disaster. Results of the fallout continue to cause untold suffering, especially in the Republic of Belorus.

Uzbekistan (UJ-UM) UK8OTF.

Iraq (YI). No fewer than 8 new YI calls have been printed on 14 MHz. RTTY since January 27. They are YI0EB and YI1-AU-D-FC-HK-RS-US-ZN. Most are QSL direct to Box 55072, Baghdad.

Kermadec (ZL8). The 11 day DX-pedition May 4-14 is looking good. Permits and licences are in hand for this all band/mode operation.

Sable Island (CY0). Ken, WA8JOC, reports everything is still a "GO" for the June DX-pedition. Operating licences and landing permission are secured but help with funding (approximately 5000-6000 dollars) still needed. An address in Canada will be announced later for sending help with funds.

SL3ZYL is a Swedish Army call.

Islands On The Air (IOTA) all RTTY:
SV5AZP Dodecanese, EU-001. CU3CZ Azores, EU-003
EA6NB Balearics, EU-004. IS0YWA Sardinia, EU-024.
DL4PM Ruegen, EU-057. EA8/DJ1OT Canaries, AF-004.
A92GD Bahrain, AS-002. 4S7EA Sri Lanka, AS-003.
CO2KK Cuba, W NA-015. VP2EN Anguilla, NA-022.
VO1XC Newfoundland, NA-027. WP4Q Puerto Rico, NA-099.
VK9XY Christmas, OC-002. VK9CR Cocos Keeling, OC-003.

Contests:

The Spanish EA-RTTY Contest starts 1600 April 6 until 1600 April 7. 1996 on all 5 HF bands 80 through 10 meters according to IARU band plans.

Classification:
A) Single Operator All Band.
B) Single Operator Single Band.
C) Multi-Operator All Band only.
D) Short Wave Listener.

Exchange Message:
RST plus CQ zone number.
EA stations send RST plus *Prefijo Provincial* and CQ zone number.
There are 52 Spanish *Prefijos Provinciales* they are :-
A, AB, AL, AV, B, BA, BI, BU, C, CA, CC, CE, CO, CR, CS, CU, GC, GE, GR, GU, H, HU, J, L, LE, LO, LU, M, MA, ML, MU, NA, O, OR, P, PM, PO, S, SA, SE, SG, SO, SS, T, TE, TF, TO, V, VA, VI, Z, ZA.

QSO Points:
On 10, 15 and 20 meter bands, score one point for QSO within own continent. Score two points for QSO outside own continent.
On 40 and 80 meter bands, score three points for QSO within own continent. Score six points for QSO outside own continent.
Contacts between stations in the same DXCC country are valid for Multiplier credit, but have Zero QSO points value.

Multipliers:
On each band, count one multiplier point for each CQ zone and each Spanish Province (*Prefijo Provincial*).

Final Score:
Total QSO points from all bands times total Multipliers from all bands.

Trophies:
Award and plate to winner in Class A).
Award to winners in Class B), C) and D).

Logs:
Use separate log sheet for each band. Include Summary Sheet showing, Scoring and other essential information. Official Log forms are recommended. Mailing deadline for all entries is May 5th 1995.
Send completed logs to:

EA RTTY Contest Manager, Antonio Alcolado (EA1MV). P.O. Box 240, 09400 Aranda de Duero (Burgos), Spain.

Thanks this month to:

3205. Re: 'cell driving' illegal

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-06 00:00:00 UTC
From: nickb@alpine
Message-ID: <4hk8pn$rs5@spock.asic.sc.ti.com>
Source record: 229826

In California at least, dual speaker earphones are banned because they focus the attention of the driver away from driving, in addition to blocking out sirens, etc. I notice, however, that our local firemen wear aircraft headsets that are designed to block out sirens and diesel engine noise when they are driving.

Does anybody know what the regs are with regard to motorcycle headsets? I've seen dual speaker helmet sets in the local bike shops, but didn't know if they're legal. How would a cop know the difference? Can a person be stopped if he's wearing a walkman headset? (CA drivers can be stopped for not wearing a seatbelt.)

3206. Re: KING TV (Seattle) attacks ham

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-06 00:00:00 UTC
From: VUBS79A@prodigy.com
Message-ID: <4hke4p$jmm@usenetw1.news.prodigy.com>
Source record: 229827

I find it fascinating and, quite frankly, funny as hell that this entire thread has disintegrated into a totally off-topic discussion about Drew and tower pulling, coax pinning, etc. All of this, even though you haven't heard a peep out of me on this thread.

I am quite flattered to know that all of you, especially my old pals Mr. Greenhalgh and Mr. Deignan, think about me frequently and continue to include me in their posts, even when I'm not around. Gee, guys, I had no idea I was that big of an influence on your lives! :-)

You're welcome,

-Drew in Sunny Central Florida-

Message-ID: <4hke9n$1s2g@usenetw1.news.prodigy.com>
Source record: 229828

Hey, this is the 90's. If you seriously believe that the TV station was unfair and showed you in an unfavorable light, do what everyone else does. Sue, sue, sue! A sympathetic jury will award you millions in "punitive damages" since you were obviously wronged by the "big, bad corporation" (TV station with deep pockets, in other words)

3208. FCC rules for cordless phones

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-06 00:00:00 UTC
From: sufana@ceco.ceco.com
Message-ID: <Dnusw6.BtE@ceco.ceco.com>
Source record: 229829

Does anyone know what FCC rule governs cordless phones? I have been
asked by a lawyer who is on some case that an Indiana law
is being used that lists "Citizen Radio Service Channel" in the wording.
I think this might be something with cordless phones or perhaps Citizen
Band radio (I don't know what FCC ruling that is under either).

Thanks in advance.

Christopher K Greenhalgh (cgreenha@magnus.acs.ohio-state.edu) wrote:

: Besides, noise in its self is somewhat distracting...how many of you
: have turned down your radio when looking for an address? :)

With the cars of today being designed to shut out most of the noise originating outside the vehicle, and the fact that most of us have the radio or a CD playing while we drive, the law seems a bit contradictory. I have had emergency vehicles approach from the rear or from a side street, and they were "right on top" of me before I noticed them, as a result.

With the long commutes into and out of LA each weekday, there are a lot of stories about what some people do while driving. The makeup-in-the-rear-view-mirror stories are old hat, when compared with shaving, reading a book or newspaper, etc. The best one I heard was the woman who was changing from her business attire to her workout clothes while driving; a definite attention-grabber!

True, but drew has condoned these illegal activities in the past, hence, when people hear of these juvenile actions...they think of someone who practices/condones these activities.

>I am quite flattered to know that all of you, especially my old pals Mr.
>Greenhalgh and Mr. Deignan, think about me frequently and continue to

From the perspective of an "outsider", this problem appears to have been created by some poor planning on the part of the NVEC. Their actions cause one to suspect hidden agendas and ulterior motives. The last thing we need is another private club attempting to guide the destiny of amateur radio.

On the other side, the ARRL's petition to the FCC is not unlike that of a bickering old lady. While the legal basis for these particular requests may have been the best approach available, seeking to censure VEC's for their participation in the group seems to lack professional attitude.

As an amateur radio operator, I find this debacle a personal embarrassment. It's difficult not to find both parties at fault. I hope that publicity of this problem does not find it's way to the general public - bad enough we had to go tell the FCC on them.

OK you all, I'm impressed with everyones response. Both sides have make their point in a very professional manner, unlike the various CW debates. Could any of you get an "offical" response on this question from the ARRL and the NCVEC,inc.? Since, I am the one that started this thread, I propose that we get on "LAST" response from those in authority, then end this. I am sure both camps are aware of this discussion.

It has been very interesting and informative. I don't know who is right, or if there is a right position. I would be interested in reading an "offical" response.

Tom,

Unless you are in a highly populated area, I think you are going to need a very sophisticated station to find anyone to work on 2m cw. By sophisticated station, I mean a beam antenna on a high tower and a very sensitive receiver. Even then, you will probably find very few stations to work unless you try satellite or moonbounce.

Realize that to work any distance on 2m cw, both stations have to have their beams pointed at each other and be on the same frequency at the same time. I think most 2m cw work is oriented toward meteor scatter and occassional tropo openings.

That said, if you are still interested in trying, you might look for some very old tube type 2m gear. I think Clegg made some in the 60s and 70s. I know "way back when" I operated through one of the early Oscar satellites using a WWII surplus aircraft transmitter which was modified by breaking the cathode lead of the final amp and keying it. Didn't work well, but I made a couple of contacts.

>period.
>--
>Scott Rosenfeld NF3I Burtonsville, MD

Four years ago I and several other active Atlanta area hams contacted the Atlanta Committee for the Olympic Games about the possibility of setting up amateur radio al la recent olympic games where special stations were set up to contact stations around the world. I have beautiful cards from Seoul for example. The person I spoke with was not friendly at all, but asked to see one of the cards. I sent along one (never did get it back) that fully explained the station and its reason to be. The next week I got a terse letter back saying that ACOG wanted no part of "amateur" activity.

At about the same time, Seattle hosted the WRTC with hams from all over the world competing against each other. I took the idea and placed this in front of several members of ACOG and they told me its too much trouble, forget it.

Within the last two years ACOG realized that they need help so they finally reached out to both hams and REACT for volunteer support. I understand they are still looking for more volunteers. But by then the taste was so bad that I wanted no part of it. I can't speak for HT's or cellular phones, but from what I hear there will be many out there as long as they are held by registered volunteers. Beware that to volunteer you need to be available for the entire 2 plus weeks and be able to work anytime.

I hear that possibily Georgia Tech (W4AQL) or Sci-Trek Museum (STARS) may have some radio activity as official olympic stations. Lets hope so as I personally don't want to let Atlanta go down as the first olympic games since WW II not to have some type of (all band) olympic amateur activity.

In 1982 I put a Peltier Cooler on a 8087 coprocessor in an IBM computer in an effort to speed up the clock. I had a PC board made and along with schematics and documentation. This progressed into modules for 80287's. In fact I hold the record for the highest speed attained using a 80287 in an IBM AT computer by cooling the 80287 down to -50 deg C.

I therefore have prior documented art on this invention and demand all royaties should be sent to me. <grin>

:>Bruce Micales
:>WA2DEU

Bruce, read the FAQ on http://www.goodnet.com/~rec/3tier.com
that item is specifically addressed. You would be able to claim your new
license class filing a 610. That way, the FCC can put this monkey to rest.

If you notice, the requirements for a Class-3 is 2,3(a) AND 3(b).
That is one extra element for the entry level license. Existing Tech(no
code) holders can take the 3(b), they will be given a Class-3 which does
not extend privleges but gives them LIFETIME credit for the 3(b)(General
Written) so when they are ready to tackle the 5WPM code, all they need to
do is take the code.

You mean in *addition* to the ARRL? :-)

Actually, I'd like to see some additional strong voices for the amateur community. A one party state isn't healthy.

Yeah, there seems adequate blame to go around for all parties to this debacle. It appears to me that the ARRL has a hidden agenda here too. They didn't want to be put on an equal footing with other VECs. I don't believe for a second that their primary concern was for Mr. Jahnke's legal exposure. A corporation exists to *limit* personal liability. Mr. Jahnke was far more exposed participating in an *unincorporated* entity.

I would appriciate if anybody could send me the schematic for a VHF
tranceiver made by CLEARTONE. The model is VHF 500/AM.
It was used for Radio Taxis, and I want to convert it for the 2 meter
band.
I contacted Cleartone in UK (I think it is a UK company), but they
haven't got any documentation any more.
I'll have to build FM modulation, FM demodulator and PLL, almost
impossible with out the schematic.
I'll be glad to cover any expenses.

Thank you all in advance.

Anybody have a set of QSTs on microfiche? Doesn't need to be complete.
Am really looking for 1950 to 1980 or thereabouts.

Thanks

>What is a Technician Plus?<

1) Any Technician who obtained that license prior to the
new "codeless" Technician license.

2) Any Technician who has passed the 5, 13, or 20WPM Morse
test.

Our local YL net entertains itself with a weekly amateur radio "trivia" question. This week it is "where, when and near what famous landmark was the first amateur radio repeater used?"

Please leave your thoughts here, and also email to me at jenglish@macshasta.com.

Thanks

Jane English KD6PCE

OK, I'm sold. At 2:00 AM tomorrow, you will be visited by a delegation of
National Guard troops, headed by the nearest freshman Republican
congressman and the regional heads of your local Baby Bell and cellular
provider. Your license and equipment will be confiscated. You will not
be compensated, because your use of them was based on a discredited
government giveaway. Furthermore, you will be charged, retroactively and
at current cellular rates, for all your previous use of the former ham
spectrum. :-)

Seriously though, it sounds like you are advocating the immediate end
of ham radio. Define "waste." The international community still
thinks it's a good idea to have amateur radio around for a variety of
reasons. Public service and emergency communications is only one. Read
Part 97 for the U.S. interpretations.

73,
Peter - KD7MW

3241. GB2RS News 10th March 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-07 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <826249940snx@llondel.demon.co.uk>
Source record: 229712
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 10th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with a statement concerning the RSGB and Mr Greg Reilly-Cooper, G0MAM, ECO.

The investigative group composed of John Hall, G3KVA; Richard Horton, G4AOJ; and Neil Lasher, G6HIU, has seen and noted the contents of the bulletin dated the 25th of February 1996 from Michael Mansfield, G2SP, and bulletins from Greg Reilly-Cooper, G0MAM, dated the 24th and 27th of February 1996. The bulletins are inaccurate and do not fairly reflect the substance of the meeting held with Mr Mansfield and Mr Reilly-Cooper on Friday the 23rd of February 1996. The statements can only make a resolution of the issue more difficult.

The group does not believe that it is appropriate for any further discussion concerning an allegation of libel against the Society or its President to be conducted or published over the packet network. Hopefully, however, the Society may soon be in the position to confirm that the matter has been satisfactorily resolved.

The RSGB London Amateur Radio and Computer Show is taking place at the Lee Valley Leisure Centre at Edmonton in London this weekend, the 9th and 10th of March. The event features a very large number of traders, lectures, a bring and buy stand, the RSGB bookstall and membership information stand, RSGB Morse tests on demand and much more. This year for the first time the event also features a Vintage Sound and Vision Fair. The official show guide was published in the March edition of Radio Communication.

RSGB Headquarters at Potters Bar will be open next Saturday, the 16th of March, between 10.00 am and 4.00 pm. The bookshop and GB3RS shack will be available to visitors, as will the National Amateur Radio Museum and Library. Morse tests are also available on demand between 11.00 am and 12.30 pm but don't forget to bring two passport-size photographs and the appropriate fee with you.

Next Sunday the 17th, there will be an RSGB Zone "A" meeting at the Norbreck Radio, Electronics and Computing Exhibition in Blackpool. The meeting will be at 2.30pm and all RSGB members and officials in Zone "A" - the North of England - are invited to attend. Come along and meet your regional RSGB Liaison Officer and RSGB Council Member for Zone "A", Gordon Adams, G3LEQ. Further details can be obtained from Gordon on 01565 652652. Gordon's address is correct in the RSGB Call Book, and he

is also available on 3640 kHz after the 1100 Sunday GB2RS news broadcast.

The RSGB intends to recommence the Amateur Radio Observation Service, or "A-R-O-S", and a new volunteer administrator is now required. He or she will be required to:

Acknowledge information received and pass it to the appropriate committee,

Maintain a list of approved observers,

Maintain records of reports and progress,

Report regularly to the Chairman of the Licensing Advisory Committee - LAC - on information received and action taken, and

Where appropriate, and with the agreement of LAC, pass on reports to the RA.

RSGB members interested in applying should in the first instance write to the Chairman of the LAC, c/o RSGB HQ, stating if they are licensed and for how long they have held their call. Other information such as whether they belong to a local club, any offices they have held associated with amateur radio and their particular interests should also be included.

The City and Guilds Radio Amateurs' Examination is to be revised from May next year, that's May 1997. The revised exam will consist of a single multiple-choice paper of 80 questions, with a duration of two and a quarter hours. This compares with the present two papers containing 100 questions, with a total duration of two and three quarter hours.

No major changes to the current syllabus are likely. Further details, including the number of items per syllabus topic and the cost, will be available later. Because there will only be one paper, the revised RAE is likely to be cheaper than the present one. It will reflect an increasingly realistic and modernistic approach whilst maintaining the present high standards.

Those candidates who have already passed one of the present two papers have two opportunities to re-sit the remaining paper: May and December 1996. From May 1997 it will be necessary for all candidates to sit the revised RAE as a whole.

The Mid-Sussex Amateur Radio Society has written to clubs throughout the UK inviting them to join in a national effort to raise funds for the BBC's Children in Need appeal later this year. In 1994 and '95, MSARS operated GB0KIN, raising over 1300 for the appeal. If your club would like to join in, contact Phil Baldwin, G3LCF, whose address is in the RSGB Call Book.

Now a request for radio operators in Somerset. On Sunday the 24th of March exercise "Parish Contact" will attempt to establish communications

between radio operators in Somerset's parishes and six Local Authority Emergency Centres staffed by members of Raynet. Significantly more radio operators are needed to cover the large rural areas which might be cut off in a major disaster. The exercise will take place on 2 metres FM and on CB radio. Further information can be obtained from Bill Lawrence or Jim Butterworth on 01 823 255 531.

GB2PQ will be on the air from the "Power Quest" Visitors' Centre at Heysham Power Station from Thursday the 14th to Sunday the 17th of March. The centre is open to schools on the Thursday and Friday and to the public over the weekend.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which this week was edited at RSGB Headquarters:

From China, Mike, G4IUF, plans to operate as BY1PK on Tuesday and Wednesday, the 12th and 13th of March, and from the 18th to 20th of March. Check these frequencies: 7005, 10105, 14025, 18070 and 21025 on CW, and 7065, 14195, 18145 and 21295 kHz SSB.

From Kerguelen Island - FT5X - the latest planned dates for FR5HR's operation are the 9th to 15th of March. After Kerguelen, he goes on to Amsterdam Island - FT5Z - from the 18th to 24th of March. All dates are approximate, as his schedule is dependent on the weather.

And from Antigua, YU1NR planned to be active as V29NR from the 8th until about the 15th of March.

Next the Rally News:

The Wythall Radio Club annual rally is taking place at Wythall Park, Silver Street, Wythall, near Birmingham, today, the 10th of March. There are three halls and a marquee with traders, and a bring and buy stall run by the club. The doors open at 10.30 and talk-in is on 2 metres channel S22.

Next Sunday, the 17th of March, the Norbreck Radio, Electronics and Computing Exhibition takes place at the Norbreck Castle Hotel Exhibition Centre on Queen's Promenade, North Shore, in Blackpool. The event features over 100 trade stands, a bring and buy stand, RSGB book stall and membership information stand and club stands. Doors open at 11.00 am and talk-in will be on 2 metres channel S22. For more information see page 94 of the March RadCom, or contact the exhibition manager Peter Denton, G6CGF, on 0151 630 5790.

And the Tiverton South Radio's 10th rally also takes place on Sunday the 17th of March. For further details contact Alan, G0MAS, on 01884 252 259.

The Bishop's Stortford 70 centimetre voice repeater, GB3SV, which operates on channel RB0, now has a new keeper. He is Trevor Jones, G1NOL. Engineering work to improve the service of GB3SV is planned for later this year. For more details, contact Trevor on 0973 790786.

Now for the HF contest news:

The RSGB Commonwealth Contest is taking place this weekend, the 9th and 10th of March. The contest runs for 24 hours from 1200 UTC Saturday. Stations in the UK should work other Commonwealth stations outside the UK on CW only, in the 80, 40, 20, 15 and 10 metre bands. A full list of Commonwealth call areas and the rules for this contest can be found in the RSGB Contesting Guide in last September's RadCom.

The Russian DX Contest takes place next weekend, the 16th and 17th of March for 24 hours from 1200 UTC Saturday. The contest is on all bands from 10 to 160 metres, excluding the three WARC bands, on CW and SSB. Brief rules are on page 21 of the March RadCom.

The Bermuda Contest also takes place next weekend, from 0000 UTC on Saturday the 16th, for 48 hours. This contest is on 80, 40, 20, 15 and 10 metres SSB and CW and brief rules are on page 22 of the March RadCom.

And the BARTG Spring RTTY contest takes place from 0200 UTC on the 16th of March until 0200 UTC on the 18th. Brief rules can be found on page 22 of the March RadCom.

Next some VHF contest news:

The final session in the RSGB 70 MHz Cumulative Contests takes place today, the 10th of March, between 10 and 1200UTC. The rules for this contest are in last September's RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS:

The period from the 26th of February to the 3rd of March saw solar activity continue at very low levels and the geomagnetic field at "quiet to unsettled" levels. Sunspot numbers declined from 26 on the 26th, to zero by the 1st, with a mean of 14. Solar flux levels remained at 72 units from the 26th to the 1st, and then declined slightly to 70 units by the 3rd. The average was 72 units. The only other feature on the solar disc was a 40-degree long filament, located at 45 degrees south of the equator, on the 29th. The filament remains quiescent. No solar flares were reported. Electron fluence levels were just at high levels for most of the period. X-Ray flux levels remained at A1 units every day. The 90-day solar flux average on the 3rd was 73 units, the same level as last week.

Geomagnetic activity declined from "unsettled" levels on the 26th and 27th to "quiet". Activity was down to Ap 2 units on the 2nd. The average was Ap 7 units. The aa indices, as supplied by the British Geological Survey for the period from the 20th to the 26th of February, saw levels increase from 9 nanoTeslas on the 21st to 34 nanoTeslas by the 25th. On the 26th, levels declined. The average was 23 nanoTeslas, about K3. Solar wind speeds averaged 350 to 400 kilometres per second, but did increase to 550 kilometres per second on the 26th. Particle density stayed below 10 particles per cubic centimetre for the period, also the Bz showed no sustained northward or southward orientation.

I'll repeat the figures: spots - 14, flux - 72, Ap index - 7, X-Ray flux - A1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 23rd to the 29th of February, saw levels at 7.3MHz on the 24th. They collapsed to 5.6MHz by the 26th but then showed signs of improvement by the end of the period. The average was 6.6MHz. The darkness hour lows averaged 2.9MHz, but were up to 3.7MHz on the 24th. The daytime highs took place between 1000 and 1500 hours every day, with the darkness hour lows at 0600 hours every day except for the 24th, when it took place at 2300 hours. Blanketing E took place on the evening of the 29th, also sporadic E took place on 50MHz on the 27th.

I'll repeat the figures: highs - 6.6MHz, lows - 2.9MHz.

And lastly the solar forecast.

This week the quiet side of the sun is expected to be looking our way. The solar disc could be spotless most days and solar activity is therefore expected to be at very low levels. Solar flux levels are expected to be around 70. Geomagnetic activity could start the week at "unsettled" but during the second half of the week decline to "quiet" levels.

During previous sunspot minima there has always been a major geomagnetic storm. These rogue storms are totally unpredictable. There have only been nine days since the end of October 1995 where the Ap index has been greater than 20 units, but this could this be the calm before the storm.

Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 9MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Zulu and G7 Whisky Juliet series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Victor series.

>What is a Technician Plus?<

Actually there are three flavors of "Technician" out there.

Tech Plus (1) Prior to about 1987(?): Passed same written exam
as General but 5 (not 13) WPM Morse. Needs 13WPM
to upgrade to General.

Tech Plus (2) 1987(?) to present: New written exam (previously
was same as General) and at least 5 WPM.

Tech (3) Same written test as #2, but no Morse test.

>whether the use of a ham radio transceiver
>compromises safety.

This used to be the case, but (about 5 years ago?) the
regulations were changed and the captain no longer has
this option. Amateur radio transmissions by passengers
are forbidden in US commercial passenger aircraft.

MdeiaWare is a commercial product of Rockwell Communications. It comes
as a complete "turn-key" system. The units purchased by the CAP
consist of a Transworld HF ALE radio, a PC with propritary hardware
cards, and special Rockwell software. To that we are adding 1200 and
9600 AX.25 ports connecting to VHF and UHF radios on CAP digital
channels.

Per unit cost starts at around $35K. (Ouch!)

Gaerhardt-

I think some of us have jumped to the erroneous conclusion that your
invention duplicates prior art. On the other hand, your statements do not
clearly show how it is different from prior art.

You are looking for investors to finance development of a product that on
the surface, appears to be old technology. I suggest you revise your
"sales pitch", so that it is clear that your invention is (a) new, and (b)
of commercial value. In other words, why would one want to use your
invention instead of existing spot-cooling techniques?

DX Bulletin 14 ARLD014
From ARRL Headquarters
Newington CT March 7, 1996
To all radio amateurs

SB DX ARL ARLD014
ARLD014 DX news

This week's bulletin was made possible with info provided by Mauro, I1JQJ, Johnny, LA5IIA, Morten, LA9GY, Uwe, DL9GOA, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

TONGA, A3. Morten, LA9GY, will operate from Tonga March 16 to April 4, including action in the CQ WW WPX contest. He hopes to secure use of the call A35GY. Morten prefers CW but will operate some SSB. QSL via LA9GY.

VIETNAM, 3W. Nikolay, UA0FM, continues to keep 3W5FM on the air daily from 1400z on 7005 kHz CW and from 1530z on 7045 kHz SSB. These skeds are with Sergey, UA0WY, running the list. QSL direct to PO Box 66, Vladimir, 600011, Russia.

SVALBARD, JW. LA5VK, LA7XJA and LA1BJA will sign JW5VK, JW7XJA and JW1BJA respectively, March 7 to 11 on all bands with CW, SSB and RTTY. QSL via LA5VK.

WESTERN SAHARA. EA3NY plans to operate in the CQWW SSB WPX contest March 30 and 31 on 80 through 10 meters, probably as S01EA.

SOMALIA, T5. I4LCK and IK4SDY will be active from Majo Island, IOTA AF-052, March 27 to April 3 on 160 through 10 meters with 500 watts to vertical and dipole antennas.

FALKLAND ISLANDS, VP8. DA4RG, will sign VP8BPZ from mid-May to mid-September. He plans to operate SSB only, not nets or lists. QSL via GW8VHI or DA4RG.

MYANMAR, XZ. According to Wayne, KF7AY, things still look very promising for the April XZ1N DXpedition, though some regulatory matters between the Myanmar military and related ministries need to be ironed out. Word from Yangon is encouraging, however.

THIS WEEKEND ON THE RADIO. Check out the Cadiz Silver Cup Contest and the Wisconsin QSO Party. Rules for both events appear on page 97 of March QST.

Can anyone tell me where I can find Newsline on the Web? The home page
at ncsu usually has it but there haven't been any new postings since the
end of January.

I am specificly looking for the bulletin that came out on Feb. 23 1996.

Thanks in advance

Kerwin, N7JGW

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

:>A rational idea! I have been a ham for 36 years, and would even be
:>willing to forego the CW test for a license, but am staunchly opposed
:>to relenquishing CW segments of the bands. Some of us old timers are
:>in a CW "rut", and enjoy it too much to give it up. But
:>realistically, as a V.E., I see a greater need for practical tests in
:>areas other than CW.

I am only removing 25kHz from CW. I know that 25kHz can go a long way
but there is still another 125kHz for CW. It would be nice to have phone
QSOs Regions 1 and 3 on 40.

Keep in mind this would be temporary until one of the upcoming WARCs
where an agreement would be made on what to do with 7MHz
(eg: 6900-7200 Worldwide Amateur Assignment, 7200-7500 Broadcasting).

Morse will never die.

Charles R. Sufana (sufana@ceco.ceco.com) wrote:
:>Does anyone know what FCC rule governs cordless phones? I have been
:>asked by a lawyer who is on some case that an Indiana law
:>is being used that lists "Citizen Radio Service Channel" in the wording.
:>I think this might be something with cordless phones or perhaps Citizen
:>Band radio (I don't know what FCC ruling that is under either).

Cordless phones are governed by parts 15 and 68 of the FCC rules (47CFR).

CB Radio is covered by Part 95.

Remember, there is technically three different "Citizens Radio Services":

Subpart A - GMRS (General Mobile Radio Service) is a radio service that
uses narrowband FM radios in the 460MHz UHF band.
A station license is required but there is no operator
license requirements.

Subpart C - RC (Radio Control). Everyting from toys to model airplanes are
covered in the RC subpart. The RC service uses a couple of
26/27MHz channels. One that permits operation up to 25W.
also various channels in the 72-76MHz band.

Subpart D - CB (Citizens Band). Breaker Breaker g'buddy. This is the
40 channel AM radio service from 26.965-27.405MHz.

For more information, go to rec.radio.cb

Lou, how about checking some old prices for us before the magazines
are gone. I think I remember seeing ads in QST of that vintage (I read
them "live", at that time) that life membership in ARRL was $20 and a
years subscription was, I think, about $2.75.

|>CML
|>WD4KZJ
| Congratulations! I just passed my 5 wpm 2 weeks ago! You get 10,40 & 80
|meters now. Voice on 28.300-28.500 and cw between 28.100 and 28.300
|On 40 you get CW from 7.100 to 7.150
|On 80 you get CW from 3.675 to 3.725
|NO voice on 40 or 80.
|
|Next stop, the GENERAL!

Congratulations! I think, however, Clint has just gotten a renewed or restored license, judging by his WD4 callsign, and found it had written on it "Technician Plus" where it used to say "Technician". Anyone who was a technician before 1991 when the no-code license was introduced automatically became a Plus in fact if not in name. The FCC has just been making it official. The Plus means you have novice-equivalent privileges on 80 through 10 meters in addition to all Technician privileges above 30 MHz because at one time you passed a five wpm code test.

Message-ID: <4hpmgj$csl@news.cais.com>
Source record: 229728

Does anyone know of any 6Meter newsletters/organizations?? Any on the Web/internet ?? Tnx. N4ZGT David.

3258. Re: 6 Meter DX/etc organizations/info

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-08 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <4hppod$b7k@omnifest.uwm.edu>
Source record: 229729

A good start for 6m info is paying $14 for a (postpaid) copy of "Six Meters: A Guide to the Magic Band" by Ken Neubeck, WB2AMU. It was published a few years ago by Worldradio Books, Box 189490, Sacramento CA 95818 (Calif. residents add 93 cents tax). It contains, among a lot of other info, the address of SMIRK, the Six Meter Intl. Radio Klub:

SMIRK
Ray Clark, K5ZMS
7158 Stone Fence Dr.
San Antonio, TX 78227

You might also want to subscribe to the "50 MHz DX Bulletin". It's $25/yr. via first-class mail in the USA from:

Victor Frank, K6FV
12450 Skyline Blvd.
Woodside, CA 94062-4541

The editor's e-mail address is frank@sneezy.sri.com

You might also want to subscribe to this e-mail reflector: vhf@w6yx.stanford.edu.

If you're new to VHF/UHF, I recommend getting the book first. The othr stuff might well be unintelligible until you read it.

73,

Rick WB9GYT

3259. 50 mhz FM operating practices

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-08 00:00:00 UTC
From: j-dvoracek@tamu.edu
Message-ID: <4hom0u$3v1@news.tamu.edu>
Source record: 229730

Does anyone know, or know where to look to find, 50 mhz FM operating practices? I have just put a commercial FM radio onto 50 mhz and need to learn about standard operating practices. I know about the national simplex frequency, but if you make contact, do you move up or down a standard amount to free the calling frequency? Since this radio is channelized and must be programmed off-line, I would like to put this information in ahead of time. Is there a 50 mhz repeater directory available online? I have been off the air quite some time, and would appreciate any help.

tnx es cul de KE5C

3260. Re: *** New Ten Tec 2 Meter XCVR Kit! ***

> finishing sections of the unit either.

While I agree that the stage-by-stage testing is a very good thing, my
beef with the manual is with the board layout and schematic drawings:

a) They're rather small, and the ink (at least on mine) bleeds a
little, smearing the print and making most part labels hard to
decipher. "Is that R15 or R18? Squint, squint." Using clayed
(glossy) paper would have prevented this problem.

b) When you're reading assembly instructions the drawings are partly
obscured within the manual, and they're face down. If they'd put
them at the end of the book rather than the beginning, they'd be
face up. I'd rather not tear them out, since then I'm sure to
lose them eventually.

>When asked, I ususally say that the Ten Tec 6M transverter is probably
>the best $100 I've ever spent on a ham radio item.

No arguement, it's a heck of a deal. Ramsey doesn't even come close.

Agreed.

> I'd say the PCB and enclosure are of equal or better quality in the
> TT, too.

My kit's PCB is nicely silkscreened, and it is a good quality
fiberglass board; but it isn't tinned or solder-masked. The last
Heath PCB I built (an SW7600, if memory serves) was both. To be fair,
the TenTec enclosure is much better.

Yes, this is probably nit picking ;).

Yes code is required for hf operation however.!
as I understand the intenational laws which were written governing
morse code as a requiremnet only 5 WPM's is all that is requred to be
able to operate on the hf bands. the ITU has left it up t the individaul
country's to decided what frequneices to allow hams who excedd the 5 wpm
test to be allowed to operate.
for example the USA could decided 5 wpm is all that is required for
operations on ALL HF amuater bands and not even have a genearl or
advacned or extra class . but instead call it something like experinced
class or some thing along that line. my point is that all this mess
about novice and general and advancded and extra need not be if the
powers to be that run the fed. govt choose to listen to the people and
allow ALL people who pass a 5 wpm code test all HF privalges.!

Me, too. And I thought only no-coders were responsible for this kind of thing. I mean, here these guys have at least 13WPM..."real hams", in other words, and yet they're some of the worst scum to be found on the amateur bands. Imagine that!

Source record: 229739
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

The only "mod" I'm aware of for the HR2600 is a rather expensive, though effective one:
"CHIPSWITCH"
4773 Sonoma Highway Suite 132
Santa Rosa CA 95409-4269

(707) 539-0512

No connection of course between me and them, never even purchased their products, but have friends who have. This kit involves replacement of the controller IC inside the 2600 which gives it the "additional frequencies".

From: faido@netcom.com
Message-ID: <faidoDny0vD.9rJ@netcom.com>
Source record: 229740

hi all !

some co workers and i want to set up a fm broadcast in our work space to take control back of the stereo situation.

it started out fine - lots of techno, dub, chicago punk, etc, but as our company grew, of course what got played on the stereo went completely vanilla !

so, we want to set up a fm band broadcast and receive it via headphones.
\
are we out to lunch ? are we hosed ? i am confident there is a way to do this. if anyone knows ~anything~ regarding this, please respond !

thank you !

Oh dear! I hope everyone say the sarcasm in my voice regarding the legislature. If the deaf can drive well (which there is no doubt in my mind that they indeed do drive well) without heearing, then the legislature is grasping at straws to complain when the rest of us can't hear. If they are making these rules for another reason, then lack of hearing well shouldn't be the pat answer!

>morse code as a requiremnet only 5 WPM's is all that is requred to be
>able to operate on the hf bands. the ITU has left it up t the individaul
>country's to decided what frequneices to allow hams who excedd the 5 wpm
>test to be allowed to operate.

The ITU regulations don't have *any* speed requirement at all, not even
5 WPM. The section says that an applicant for an amateur license must
demonstrate that he can "send by hand and receive by ear texts in the
International Code." That's it, period.

Note that this places the US in non-compliance since there is no longer
a "send by hand" test, and also in non-compliance because the US will
make accomodations for the deaf, thus voiding the "receive by ear" part
of the regulation as well.

The FCC has stated repeatedly, in rejecting petitions to reform the
licensing system, that the only reason for the current baroque US amateur
licensing system is "because the amateur community demands it" (meaning
the ARRL demands it). That implies that the government sees no real need
for such a complex licensing system. And indeed, most other industrialized
countries don't have such complex licensing schemes.

Our current system (Incentive Licensing) is primarily a result of ARRL
lobbying (aside from no-code, which was achieved over the objections of
the ARRL by groups such as QCWA and TAPR). To achieve meaningful reform,
the ARRL must be reformed, or discredited as sole spokesman for US amateur
radio, or the FCC must be reminded that they exist to serve the public
interest, and not just the interests of the current amateur community.
The latter approach carries some dangers, however. It is convienent for
current amateurs that the FCC acts mostly as a captive of those it regulates.
We need to pull the strings of our puppet carefully, or it may break free
of our control.

I didn't mean to imply anything negative on the Ten-Tec kit. Maybe a better way is to say that there are "differences" between the Heathkit approach and the Ten-Tec approach. You are correct that Ten-Tec has some nice intermediate tests that Heath may have neglected - it kind of depends on which kits we probably built back in the old days. In any case, I enthusiastically endorse the Ten-Tec 6m transverter kit!

I'm also glad to see a reputable company selling kits again. After I finish the 6m xverter, I can see building another - in fact, I'm thinking of doing a joint project with my 8 1/2 year old daughter to assist her in building a SW receiver kit. I've had her helping me with component placement and soldering and she's loving it! Kind of exciting for Dad to see one of the kids getting into this too.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 MARCH AND FORECAST FOR 10 MARCH - 12 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 08 Mar
Daily Proton Fluence >1 MeV: 1.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.5E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Mar 11 Mar 12 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Mar: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 08 Mar
Learmonth 10 2222 2333
Fredericksburg 7 7
Planetary 8 8

Observed Kp for 08 Mar: 1333 2021

2B. MAGNETIC FORECAST
Date Ap Conditions
10 Mar 15 Unsettled
11 Mar 10 Unsettled
12 Mar 8 Unsettled
COMMENT: IPS Geomagnetic Warning 3 was issued on 7 March and
is current for interval 9-10 March. Only isolated high latitude
active conditions have been observed this suggests generally
unsettled conditions can be expected.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
09 Mar Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
10 Mar Normal Normal Fair
11 Mar Normal Normal Fair
12 Mar Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
09 Mar 4

Observed Australian Regional MUFs:
Darwin: 10% depressed.
Townsville: near predicted monthly values to 5% depressed.
Sydney: near predicted monthly values.
Hobart: 5-10% depressed.

Predicted Monthly T index for March: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
10 Mar 0 about 5% below predicted monthly values
11 Mar 5 near predicted monthly values
12 Mar 10 near predicted monthly values
COMMENT: IPS HF Communications Warning 8 was issued on 7 March
and is current for interval 9-10 March. The expected middle to
high latitude depressions have not yet eventuated.
